FOREWORD

ALL WISDOM—so the sages tell us—came out of the East. It is from the Orient, from ancient Arabia, that we derive the term “Almanac.” It was originally “Al Manahk,” meaning “the weather” or “the climate,” which is much the same thing to the man in the street or the farmer in the dell. Once upon a time an almanac might have been described (and was; see *Encycl. Brit.*) as “a book or table containing a calendar of days, weeks, and months of the year, a register of ecclesiastical festivals and Saints’ days, and a record of astronomical phenomena,” but centuries ago the makers of almanacs began adding sections of no ecclesiastical tinge whatever and much mundane material that had no relation to the movements of the stars in their courses. Now you can find almost anything you look for in a well-ordered almanac. At least, we hope you can find it in this one. We have not neglected the “register of ecclesiastical festivals and Saints’ days” and we are rather proud of our “record of astronomical phenomena,” but beyond that, with the help of authoritative organizations and individual experts in many fields, we have put together a book of facts and figures in a way to make such matters of record not only readily available but easily absorbed. We have tried to make the tables simple and the text informative and entertaining.

The first almanac published in this country came off the Bradford press in Philadelphia in 1687. The most famous of the colonial productions of this kind was, of course, *Poor Richard’s Almanack*, first published in 1733 by “B. Franklin, at the New Printing Office near the Market” in Philadelphia. *Poor Richard’s Almanack* was published annually for a quarter of a century, during which time it made Benjamin Franklin a rich man and a noted figure in his country’s affairs. We mention this purely as a matter of history and not gloatingly as an omen of financial or political significance to the editors or publishers of this almanac. Our office boy is authority for the blunt statement that nobody remotely resembling Benjamin Franklin ever worked in this office. Or even visited it.

In England in the days of *Georgius Tertius Rex* a publisher by the name of Thomas Carnan was three times thrust into prison for issuing and selling an almanac. We trust that no such foul fate will overtake us. The defendant, Thomas Carnan—eventually he was cleared in court, by the way—was jailed on the charge that his publication and sale of an almanac infringed on the monopoly granted by royal authority to the great universities, Oxford and Cambridge, and the Stationers Company of London.

There probably are some mistakes in this almanac, some errors in text and tables. We beg your indulgence for such lapses and we promise cheerfully to do better next year. In the interim, we hope you will like this almanac; it was made for you.

JOHN KIERAN, *Editor*

THE WHY AND WHEREFORE OF THE

DURING THE YEARS I was planning and preparing the INFORMATION PLEASE ALMANAC, my friends kept asking why I wanted to undertake such a formidable task. Did I know what I was getting into, they inquired skeptically. There were times when I was tempted to share their doubts as to whether the project really would materialize.

The idea of the almanac came from our radio program. Millions of questions have come to "Information Please" in its nine years on the air. Always we have asked that the correct answers be included, but in a great many cases they were not. Sometimes this was due to laziness; but very frequently our question-senders explained that they lacked the necessary reference books. We received this comment so often that I realized that many people had a need for a comprehensive reference book.

True, many reference books are available, but most of them are specialized and expensive. The average family cannot afford a collection of reference works. Obviously, there is a need for one book that will do the work of many. And that book must not only be authoritative, but also organized so well that research at home will be simple, even enjoyable.

We studied every type of reference book and found that the almanac type was the best suited for presenting a maximum of information on the widest variety of topics.

In his foreword to this volume John Kieran says "you can find almost anything you look for in a well-ordered almanac." Yes, John—provided you first find the almanac that really is *well-ordered*. Too often almanacs throw at the reader a mass of undigested data which has accumulated over the course of years. Like Topsy, almanacs have "just grown."

In our task of creating a modern almanac it has been a definite advantage to start from scratch. We could develop the book according to plan—we could put into it scholarship, judgment, editorial ability. Really organize it.

The first step was to find the right editor. That was easy. Any one of a million "Information Please" listeners could give the answer—the amazing John Kieran.

The next problem was how to assemble something like 1,500,000 words and figures on countless subjects. Even the omniscient John Kieran couldn't pull all that out of his head. We decided to get our material from the most outstanding authorities we could find—both individuals and institutions. This book would not be a conglomeration of anonymous information, but a collaboration of experts.

There was another thing. Facts are fun. They should be presented in such a way that they don't scare you, but give you enjoyment. We wanted to build a book that people from Maine to California could use—or browse through—with real pleasure.

To achieve this we employed modern journalistic technique. After the researchers gathered our facts, the data were turned over to a staff of top rewrite men to be put in the most readable form. We have tried to make statistical tables interesting by interweaving with them narrative text, charts, maps. When we invited specialists to do articles, we sought those who we knew were good writers. For instance, the biographies of the Presidents are not done in a perfunctory manner, but are written by Arthur Schlesinger Jr., who won the Pulitzer prize for his "Age of Jackson."

However authoritative and interesting we could make our material, we also had to make the book readable from the point of view of type. So we engaged typography experts to give our book high legibility and at the same time enable us to pack an almost unlimited number of facts in a limited space. We conducted reading tests with many varieties of type and among many groups of people. I hope you find the result good.

INFORMATION PLEASE ALMANAC

Our purpose has been to cover a great variety of interests so the book will be useful to many people for many purposes. You will find here material that you can't find anywhere else—for example, a table on the world's riches and resources; a forty-page travel guide for every country in the world; a chronology of world history in headline form from 4004 B. C. through 1946. And our review of 1946 includes not only the news highlights, but articles by specialists in the various fields such as sports, drama and radio. We have devoted generous space to this section because we think as the years go by people will enjoy looking back in our annual almanacs for the story and records of the previous years.

Then there was the matter of the index. I knew how vital this was, because I've often had to look things up in a hurry just before our radio program went on the air. I was determined to give our INFORMATION PLEASE ALMANAC an index that would make fact-finding easy—not baffling. We engaged an expert index organization, one of the best in the publishing field, and gave them as many pages as they wanted. They produced an index which carries twice as many entries as any almanac or yearbook I know of in this country; and yet I think the index is simple enough for a seventh-grade pupil to use.

How do you tell what information should be included in an almanac and what shouldn't? Frankly, we don't know. But we intend to find out as we start work on our 1948 edition. We plan to conduct surveys of users of this almanac and of librarians throughout the country to determine the usefulness of every section in the book. If only a few people are interested in a section, we will drop it to make room for more useful and interesting material. We are determined to improve the book from year to year—and we would be glad to have your suggestions.

We have gone to great pains to avoid errors. The material has been scrutinized as many as six times. A typical manuscript, for example, was read first by our Information Please organization, then by a trained newspaper copyreader. Set in type, it was combed for errors by the publisher's proofreader, then by the author, then by our organization. Finally, the page proofs and foundry proofs were gone over. However, maybe you will spot an error that everybody missed; if so, we'd like to hear about it.

It certainly has been a monumental job getting out the almanac. You can plan it for years, as we did, but the actual work of writing and assembling obviously has to be done in the current year in order to be up to date. We were able to accomplish it because we had so many individuals and organizations working on different sections at the same time. The cooperation was wonderful. I am grateful to more people than I have space to list, but I might mention a few of them:

At the top of the list are the organizations which contributed major sections—The Encyclopaedia Britannica, The Research Institute of America, The American Express, Who's Who, and the N. Y. *Herald Tribune*. The *Herald Tribune* contributed not only as an organization but its staff played important roles in preparing this book. Included among these were Joseph Herzberg, City Editor and Al E. Davies, Assistant Night Editor.

Important individual contributions were made by Marcus Duffield, our editorial adviser on World Affairs and History, Cyrus Leroy Baldridge, our Art Director, who also paged the entire book, and Gordon J. Kahn.

We want to express our appreciation to members of our permanent staff who gave up many weekends and evenings. A few of them are Muriel, Leonard, Joe, Ronnie, Louis and others.

WASHINGTON

by

ELMER DAVIS

News analyst for the American Broadcasting Company,
former Director of the O.W.I.

WASHINGTON in the first postwar year was a place where every prospect pleases—more even than usual, thanks to a remarkably cool and comfortable summer—and if its inhabitants felt more than usual that man is vile, the vileness was mostly out around the country, with its consequences tumbling in on a harassed government. A strange year—with the head of an employers' association publicly demanding higher wages for his employees; with Supreme Court Justices using language about each other that would seem indecorous in Congress; and with the chairman of the Republican Congressional Campaign Committee accusing the Administration of "ingannation"—a term that may be a commonplace of political invective in Blanchester, Ohio, but stood the capital's etymologists on their heads.

Yet the pattern was simple. A President who had inherited the Roosevelt policies without the Roosevelt prestige (or the Roosevelt genius) was gallantly trying to continue them in the face of a hostile Congress. Roosevelt too had had a hostile Congress, but in wartime it generally did what had to be done. Truman, in the postwar letdown, had to deal with a Congress not only hostile but irresponsible; its majority was an alliance of Republicans and conservative Democrats, powerful in negation but null and void when it came to any positive program. On top of which it was a year of continual strikes—industrial workers, miners, railroad men, seamen; with stock raisers and stock feeders so generally withholding livestock from the market that this had the effect of a strike too. And the Administration was damned alternately for not stopping them and for not trying to stop them, but damned for something anyhow.

When the year began the Administration was still committed to carrying the wartime wage-price-stabilization program through the transition period; committed also to the doctrine that in many industries wages could be increased without price increases—which might have proved true if its major premise, full production, had ever been attained. The General Motors strike was on—and with others coming up, the President again asked Congress to pass his program of social legislation, which he hoped might remove the principal causes of strikes.

They never did pass it, except for a few odds and ends that added up to nothing much, preferring to treat the symptoms rather than the disease. Then came the steel strike, which was settled at the cost of a mortal wound to the stabilization program. A wage increase of eighteen and a half cents an hour was compensated by a price boost of five dollars a ton—about half way between what OPA thought producers should get, and what some of them wanted. It was insisted that this was only a bulge in the price line, that the line would still be held; but the precedent of paying for wage increases with price increases, once set, had to be followed in one industry after another. Before long the line was nothing but bulges; and with the maritime strikes in early fall the whole wage-price-stabilization policy was in principle abandoned. Removal of meat-price

controls in October sank it a little farther; and immediately after the election the President ended all controls on wages and all on prices except on sugar, rice, and rents; thus giving up an attempt to maintain a semi-controlled economy which had never had much chance of success.

It had not held down prices, and it had not stopped the strikes. With steel and motors in production again, John L. Lewis took his coal miners out on their annual walk. That one was settled near the end of May, but only after the government took over the mines and made a contract with the union which the mineowners were reluctant to assume. On November 1st Mr. Lewis claimed that the government had "breached" that contract (his locution, not mine) and the whole coal question was thus tossed back into the field of argument.

The coal strike had threatened to shut down the United States, eventually; just before it was settled the railroad strike made that threat immediate. Called by the trainmen and engineers, who balked at a settlement accepted by the other rail unions, it raised the question whether the government was running the country; and its solution answered that question, if nothing else.

May 25th was a day of such tension as Washington had not seen since December 7, 1941. The President had taken over the railroads and broadcast his determination to keep them running; and that day he came before Congress and asked for emergency powers to deal with strikes against the government. The railroad union leaders had capitulated just before he started speaking; nevertheless the House of Representatives passed with little debate and with few dissenters a sweeping law providing, among other remedies, for the drafting of strikers and their union leaders into the army—a singular penalty, for a government which was then trying to make military service attractive. But when the Senate got around to the bill the emergency had passed; its most drastic provisions were stricken out by an alliance of liberals and conservatives, equally opposed to them on opposite grounds; the two versions of the bill never went to a conference settlement, and Congress eventually adjourned leaving the government with no additional emergency powers at all—a lack which was to be felt, later.

The President had also asked Congress to appoint a joint committee to study industrial relations, and recommend permanent labor legislation at the next session. Nothing was done about that either—perhaps because the kind of permanent legislation that suited the bipartisan majority had already been written into the Case bill. This measure (whose assorted restrictions on unions included none that would have prevented the great strikes of the year) ran into a Presidential veto which the House barely upheld. In his veto message the President outlined the kind of permanent labor legislation he would accept; but by that time Congress was in its usual end-of-the-session jam, and preferred to put it off till next year.

In May the Secretary of Labor had said, "We just can't have a maritime strike"; but by fall we had had a series of them, one union after another going out and successively paralyzing the American merchant marine. All of which began with the singularly inept decision of some shipping operators to pay higher wages to Federation of Labor seamen than to CIO seamen doing the same work; why the Maritime Commission ever approved that is almost as big a mystery as why it was ever done in the first place. But from early spring public attention was increasingly absorbed by the stock raisers' strike that spearheaded the drive against price control.

Powerful interests led by the National Association of Manufacturers had been demanding the immediate end of price control (which everybody knew would have to be abolished in a year or so); but it was the farm lobby that was most powerful in Congress and it was the farmers' action that built up most sentiment against continuation. As June 30th approached when the price-control law would expire, the flow of livestock to the markets virtually stopped; stock raisers were holding back till the lid was off. Yet the manufacturers came off better than the farmers in the bill that finally passed

Congress, thanks chiefly to the Taft amendment allowing them prewar rates of profit with allowance for cost increases since; and it was the Taft amendment that was chiefly attacked in the President's veto message on June 29th—so vigorously that it looked as if the ground was being cleared for a Taft-Truman fight in the Presidential election of 1948.

The veto was sustained and in mid-July Congress passed another price-control bill, minus the Taft amendment, which the President reluctantly signed. Chester Bowles, target of such vicious attacks as no man in Washington had had to take for years, had resigned; Paul Porter, succeeding him as Price Administrator, undertook to operate under the new law which a Congressman had called not good enough for the friends of price control, or bad enough for its enemies. Price controls on meat were restored in September, after two months in which there had been plenty of meat for people with plenty of money; the Secretary of Agriculture, now in authority over food prices, was so reckless as to say that farmers could make enough money at ceiling prices but most farmers seemed to think otherwise. The stock raisers again kept their stock down on the farm, and by October the whole nation was raising an anguished outcry for meat which threatened to drown out all the other arguments in the Congressional campaign. On October 14th the President yielded to the clamor and ended meat-price controls, putting the blame on a few men in Congress who, he said, were determined to wreck the control program at whatever cost to the people. Meat prices jumped up, then gradually slid down as consumers showed reluctance to buy at the peak; but the action came too late to have much effect on the campaign.

Congress had adjourned on August 2nd, having produced an apparently unworkable price-control bill and a draft bill of which the best that could be said was that it was not so bad as had once seemed probable; and, after long and acrimonious argument, it had approved the British loan. As usual in the last-minute rush, some bad bills were passed and some good ones were lost sight of; but other good ones unexpectedly got through. Congress passed the La Follette-Monroney Act modernizing its own machinery—not so much as is needed, but more than skeptical old-timers had ever dared to hope—and incidentally raising its own salaries; but Congressmen who are worth anything at all are worth enough to live on, which they are hardly getting now. And it passed the McMahon bill for control of atomic energy, though not till the House had indulged in one of its old-fashioned Saturday-afternoon lynching bees and kicked it to pieces—nominally in the interest of national security, actually in that of private monopoly. But the essentials were restored in conference, thanks largely to the firmness of the Republican Senatorial conferees. The record might have been worse; it might also have been immeasurably better. Indeed it was due chiefly to the tact and the unwearied patience of such leaders as Senator Barkley and Speaker Rayburn that any decent legislation was enacted at all.

The President had other troubles. Of the team of wild horses that Roosevelt had driven in harness in the early New Deal days only two remained in the Cabinet, and those two successively broke the traces and galloped off on their own. Harold Ickes resigned on February 12th, and explained his action next day at a news conference that drew more reporters than would commonly be brought out by anything but a fire in the National Press Building. Honest Harold—a thorny character, but about the best Secretary of the Interior within living memory—had quarreled with Edwin W. Pauley, treasurer of the Democratic National Committee. Mr. Pauley, he said, had asked him to let up on his claim of Federal ownership of tidewater oil lands, suggesting that such a renunciation might bring in a lot of money to the Democratic campaign fund. Mr. Pauley said it wasn't so; Mr. Ickes stuck to his story, and built on it a cogent sermon to the effect that of all Federal departments, the Interior above all must be free from any suspicion of the association of politics with money.

But Honest Harold had other complaints. "The political gnats," he said, "are swarming"

—a phrase taken as an allusion to the personal friends and advisers, mostly from Missouri, with whom the President had surrounded himself. Also the President had said that Mr. Ickes might very well be mistaken in his recollection; and you say that about the fiery Harold only at your peril. The result was a fireworks display which looked as if it would provide excellent campaign material for the Republicans.

Yet it had singularly little result. The Republicans chose to focus on other issues; Mr. Pauley presently went abroad as Reparations Commissioner and rendered useful service to the country; and the President took the bite out of Mr. Ickes's most valid criticism—the need of keeping the Interior Department above suspicion—by appointing as his successor Cap Krug, whose proved integrity and capacity removed any question on that point. Later, by an equally good replacement, the President undid some of the damage that had been done by the far more serious case of Henry Wallace.

Mr. Wallace on a Tuesday (September 10th) showed the President the manuscript of a speech he proposed to make on the following Thursday to a New York audience which would certainly contain some Communists and more fellow-travelers—a speech calling for a softening of our policy toward Russia. By government procedure he should have shown it to the State Department (which would have refused to approve it); the President should have read it carefully but apparently did not—influenced perhaps in some degree by his personal modesty, and by generosity toward a man who had been his chief competitor for the nomination. On Thursday morning reporters who had seen advance copies of the speech asked the President if he had approved it; he said he had, all of it; and when asked if it did not propose a considerable departure from the policy Mr. Byrnes had been following (with Republican support) he said they were exactly in line.

But when the speech was delivered almost everybody else found the two policies very different indeed. Some preferred the Wallace policy; most people, apparently, did not. And while some of those who howled the loudest for national unity in support of our foreign policy were Republicans who had been conspicuous and bitter opponents of our foreign policy in 1940 and 1941, nevertheless the clamor was so general that on Saturday the President had to explain. When he approved Mr. Wallace's speech, he said, he approved only his right to say it; he did not approve the policy it advocated and the foreign policy of the United States was the same as ever. But that was not enough. Mr. Byrnes's position at the Paris Peace Conference, already shaken, would be untenable if a member of the Administration continued to attack his policies. On the following Wednesday Mr. Wallace saw the President and promised to make no public statements or speeches till the Paris conference had ended. But even that would not do; the Paris conference would by no means end our dealings with Russia, which Mr. Byrnes could hardly conduct effectively with one of his colleagues continually demanding something else. So on Friday the 20th the President asked for, and obtained, Mr. Wallace's resignation; perceiving now a "fundamental conflict" on foreign policy which he had not noticed the week before, and declaring that "our foreign policy remains in full force and effect without change."

Not for twenty-five years had Washington seen anything approximating such confusion. Aside from its effect on our foreign relations, which can not yet be calculated, it promised to have considerable political consequences; for with Henry Wallace chased off into the wilderness a material number of left-wing voters, while unable to go over to the Republicans, might choose to stay home on Election Day. Further, in a situation where both men had been at fault, friends of both Mr. Wallace and Mr. Truman could hardly escape the conclusion that the graver responsibility for the series of blunders had been the President's. Yet once again he undid much of the damage by choosing Averell Harri-man as Mr. Wallace's successor as Secretary of Commerce—an appointment almost universally praised; and Republicans made much less out of it than might have been expected, preferring to find their chief issue in the cry of a carnivorous populace for meat. (An exception was their National Chairman, Brazilla Carroll Reece, who even after Wal-

lace had been thrown out continued his campaign to persuade the public that the government was dominated by "Red Fascists.")

Whatever the effect of that argument (less, probably, than the accumulated weariness of the country with a party long in power) the election on November 5th gave the Republicans a decisive majority not only in the House of Representatives, which had been expected, but also in the Senate. This landslide brought a number of proposals, from Democratic sources, that the President should resign, as would a British or French Prime Minister after such a sweeping repudiation, and (by a method permitted by the Succession Act) turn over the White House to the Republicans. Mr. Truman, however, preferred to follow the spirit of the Constitution as it stands and remain in office; but he gave assurance that he would cooperate with Congress in a non-partisan spirit and Republican leaders promised similar cooperation with him. Thus began what was called the second honeymoon of the Truman administration; but veteran Washington observers had little confidence that it would last.

In this turbulent year even the august Supreme Court was shaken when Justice Robert Jackson, on leave as prosecutor at the Nuernberg trials and perhaps under some strain from his labors there, wrote a letter to the Judiciary Committees of the House and Senate accusing his colleague, Justice Black of tending to bring the Court into disrepute. His stated reason was the fact that Justice Black had sat in cases argued by his former law partner (as many Supreme Court Justices had done before him); but it was recalled that Justice Black had been quoted by a Washington columnist in sharp criticism of a decision by Justice Jackson. This was no personal controversy, Jackson insisted, it involved the reputation of the Court.

Others thought it also involved either Justice Jackson's ambition to succeed the late Harlan F. Stone as Chief Justice, or his fear that Black would be appointed to the post. But before his protest was made public the President had appointed Secretary of the Treasury Vinson as Chief Justice. Mr. Vinson, in long service on the bench, in Congress, and in the executive branch had shown himself able to play any position in the infield or outfield; but it began to seem that what the government needed was a man who could play them all at once. When the Court met again in October, C. K. Berryman, who can say more in a cartoon than other men can in a long editorial, pictured Vinson lining up the Associate Justices with the admonition, "Remember, no scuffling on the bench! No throwing spitballs!"

A strange year—bitter, turbulent, and unfruitful. A typical first postwar year, said men with historical memories; less injurious to the national interest, at any rate, than 1866 or 1919. But bad enough. As it drew to a close, persons with a taste for the placid were heartened by a sign that Washington was coming back to normalcy—the announcement that the White House would resume the traditional series of State dinners for officials and diplomats, suspended in the war years. Others who loved not placidity but comfort saw in this a dire premonition that tails laid aside for the duration while Washington won the war in dinner coats must be taken out of the moth balls, and that the boiled shirt would once more torment men who had grown used to soft collars by lamplight as well as by daylight. Still, Washington at any rate seemed getting back to normal.

Yet one item in the business that Congress left undone raised a question as to how much normalcy Washington can count on hereafter. Buried in the files of the Judiciary Committee of the House is a resolution introduced by Mr. Trimble of Arkansas for a constitutional amendment, making provision for the selection of an interim President "when there is no President, Vice President, or person provided by law able to act as President" (there are seven of them now); and for the choice of an interim Congress "when a majority of the Senate and of the House of Representatives are unable to perform their duties." In other words, it has already seemed worth while to at least one member of Congress to make provision now of means to carry on the government, if Washington should be wiped out by an atomic bomb.

SPORTS OF 1946

by

GRANTLAND RICE

dean of sports writers

THE SPECTATORS, not the competitors, were the astonishing and outstanding feature of the sports whirl of 1946. Never before in the history of amateur or professional sports in the United States did so many wild-eyed enthusiasts storm through the turnstiles of outdoor stadiums and indoor arenas to witness almost any kind of competition the promoters had to offer. Attendance and gate receipt records were swept away in practically every field of sport with two notable exceptions: the attendance and gate receipt records for boxing still date back to the Dempsey-Tunney clashes in Philadelphia and Chicago, and 1946 was not quite as big a year on the turf as was 1945. Aside from that, the attendance at sports spectacles was overwhelming and the money involved was enormous.

The economists probably can explain it in terms of "surplus currency" and "lack of consumers' goods" because the standard of competition offered to the onlookers certainly was not top grade. Not all the star athletes who had gone off to the wars had returned to the field of play, and many of those who had returned were the worse for wear and tear. Certainly the 1946 collection of leading attractions on the field of sport didn't compare with Babe Ruth, Jack Dempsey, Gene Tunney, Bobby Jones, Bill Tilden, Earl Sande, Rogers Hornsby and a few others who added so much to the lure of sports after World War I. The turf of 1946 offered no such attraction as Man o' War, the postwar sensation of a generation ago.

But those ancient attractions didn't begin to draw the crowds that 1946 saw in all directions where sports spectacles were the magnet. Major league baseball clubs set attendance records that the most optimistic club treasurer never would have dreamed of a decade ago. Football, basketball, tennis and golf piled up attendance records all along the line. The West Side Stadium at Forest Hills turned away would-be ticket purchasers two days running because the stands were overflowing on the semi-final and final day of the national tennis championship that saw John Kramer of California, ex-lieutenant in the Coast Guard, defeat Tom Brown from San Francisco, only lately out of a soldier suit. There were 50,000 paid admissions to a golf tournament! The Brooklyn Dodgers, with one of the smaller parks on the circuit, set a new National League attendance record far beyond anything that anybody in baseball ever expected. The New York Yankees, with a third-place club, reached an all-time high in attendance for any baseball club. Even the Phillies almost doubled their best previous attendance record.

Only the New York race tracks, where special taxes had been added, showed a slight falling off in attendance and betting totals. But no one starved in the racing game—or no one who was on the right side of the mutuel windows, which isn't the front side. In short, the tracks did well for themselves. And there was the King Ranch's Assault to win the Triple Crown of the American Turf—the Kentucky Derby, the Preakness and the Belmont—and rank with such famous predecessors as Sir Barton, Gallant Fox, Omaha, War Admiral, Whirlaway and Count Fleet. On the financial side, "added money" was tossed around freely by track officials and \$50,000 races were common.

Aside from inflation in attendance, the feature of the baseball year was the terrific race in the National League that culminated in the tie between the Cardinals and the Dodgers at the end of the regular playing season, which was something entirely new in baseball. It's true that there was a tie in 1908 between the Cubs and the Giants but that was because of the famous "Merkle Incident" and a game that had to be replayed. In 1946 the Dodgers and Cardinals were tied when both clubs had finished their full schedules. The play-off schedule was hurriedly devised while the Red Sox, who brought Boston its first pennant in 28 years, kept in practice by sparring with a pick-up team of American

League stars. The World Series, though it was fought right down to the seventh game before the Cardinals won, was something of an anticlimax in the wake of the Cardinal-Dodger feud that saw the Cardinals take two play-off games from the Dodgers to move into the seesaw struggle of the World Series and emerge victorious over Joe Cronin's—and Tom Yawkey's—rich Red Sox.

It was known from the start that football would be more than slightly terrific in 1946, and that's the way it turned out. Plenty of husky young fellows were back from the wars and the GI Bill of Rights, as well as previous touches of campus careers, sent a lot of them to college and from there into football suits for the autumn revelry. Graduate managers and directors of athletics were announcing in August that they had no more seats available for their October and November big games. Many of the traditional contests could have been sold out four times over if that many tickets had been available. There was, of course, a notable upgrade in the quality of play over that seen on the college and professional gridirons in the war years, but the experts predict bigger and better football teams in 1947. The coaches and trainers said that some of the returned athletes were still feeling the effects of tropical illness or vitamin-deficient diets or other temporary and service-acquired afflictions. It was said that men returned from the Pacific were inclined to be weak on their legs, and a football player does need good legs. But it was a great football season, and if 1947 is to be a better one, may I be there to see!

There were two features of the 1946 boxing program that stood out. One was the ease with which Joe Louis disposed of Billy Conn and Tami Mauriello in defense of his heavyweight crown. The other boxing feature of the year was the knock-down-and-drag-out battle in which Tony Zale, the middleweight champion who was four years in the service, came back to beat Rocky Graziano in what fight experts agreed was one of the best brawls in modern ring annals.

The green stretches of the golf fairways furnished an interesting scene in 1946. The national open championship was won by Lloyd Mangrum, an ex-GI from the European theater, and the national amateur championship—this is one for the book!—was won by an ex-professional, Ted Bishop. The football stars of the autumn were too numerous to mention, but the leading lights of the baseball campaign were Bob Feller, with a new major league strikeout record of 348, Harry the Cat Brecheen, for his World Series pitching, Stan Musial and Mickey Vernon as the batting leaders of their respective leagues, and Hank Greenberg, the ancient gentleman who led both leagues in home runs after some critics had voted him dead and ordered him buried.

THE ATOM TODAY AND TOMORROW

by

WILLIAM L. LAURENCE, of the N. Y. Times
winner of Pulitzer Prize for stories on the Atom Bomb

THE uranium atom was actually split for the first time by Enrico Fermi in 1934, a young physicist at the University of Rome. Luckily for the world, as we know today, he did not realize what he had done. Had he done so, it is almost certain, that the Nazis would have had atomic bombs ahead of us.

The atomic bomb, as well as the release of the vast energy within the nucleus of the uranium atom of atomic weight 235, was made possible by the discovery in 1932 of the atomic particle known as the neutron by Sir James Chadwick, at the famous Cavendish Laboratory at Cambridge University. The neutron, as its name implies, carries no electrical charge and is able to penetrate the electrical barrier surrounding the atomic nucleus. Its discovery, therefore, gave scientists the means to penetrate the heavily

guarded citadel of the atomic nucleus, in which more than ninety-nine percent of the energy of the universe is concentrated.

The discovery of the neutron also gave man a true picture of the atom. We know that it is constituted in the manner of a miniature solar system, a central nucleus, like the sun, surrounded by electrons revolving around it in the manner of planets in various orbits. The nucleus of all the elements, with the exception of hydrogen (the first element), is composed of a combination of protons (atomic particles carrying a fixed unit of positive electricity) and neutrons. The number of protons in the nucleus determines the nature of the element.

There are ninety-two natural elements, beginning with hydrogen at number one and ending with uranium at number ninety-two. In addition there are about 300 twins of these elements known as isotopes. For example, hydrogen has only one proton in its nucleus, surrounded by an electrically negative electron, which makes the atom neutral. Helium has two protons and two neutrons in its nucleus, surrounded by two negative electrons to balance the protons. The sixth element on the atomic table, carbon, has six protons and six neutrons in its nucleus, surrounded by six negative electrons. The total number of protons and neutrons in the nucleus determines the atomic weight of an element, whereas the number of protons alone determines the atomic number. Thus carbon is the sixth element with an atomic weight of twelve.

There are two principal types of uranium, the ninety-second and last of the natural elements. One of them contains 92 protons and 146 neutrons in its nucleus, which gives it a total atomic weight of 238. The other, much more rare, contains ninety-two protons and only 143 neutrons in the nucleus, which gives it an atomic weight of 235. This twin, or isotope, of uranium, is the element we are most interested in, for it is the only natural element that can be split on a practical scale. With it man can make two other elements out of uranium 238 and thorium, to serve the same purpose. Without uranium 235 (U.235) these other two elements would be useless.

Immediately after the discovery of the neutron scientists all over the world began using it as a projectile against the nuclei of various atoms. Fermi was curious to find out what would happen if he fired a neutron into the nucleus of the uranium atom. What he wanted to know was whether the addition of one neutron to the nucleus of an atom of uranium 238 would create an element beyond uranium of atomic weight 239. The results he observed, which as we know today was the splitting of the uranium atom in the uranium mixture he was experimenting with, were so mystifying that it set physicists all over the world to work.

For five fateful years the work continued. The final break came, ironically enough, in Germany, where a scientific team of two men, Drs. Otto Hahn and Fritz Strassmann, and one woman, Dr. Lise Meitner, was working on Fermi's mystery. What they saw posed a mystery even greater than the one they had set out to solve. The uranium they had started with had somehow miraculously transformed itself into barium. The phenomenon was so contrary to all scientific concepts, that neither Dr. Hahn nor Dr. Strassmann could bring himself to draw any conclusions. They merely reported what they saw and let it go at that. The date, now famous in the annals of man, was January 6, 1939.

Meantime Dr. Meitner found herself exiled from Germany. She and another fellow exile, Dr. O. R. Frisch, talked it over and came to a famous conclusion. The barium, which contains 56 protons, must have come as the result of the splitting of the uranium atom into two unequal parts, the other part being krypton, containing 36 protons in its nucleus, accounting for the total of the 92 protons in the nucleus of uranium. If that were the case, they reasoned, then the uranium atom not only split but, more important still, released a tremendous amount of energy.

They lost no time in testing their hypothesis and, sure enough, they found they were right. Man at last had split an atom and released part of its vast energy. On measuring the amount of energy liberated they found that it was equal to 200,000,000 electron volts per atom. This meant that the splitting of one pound of uranium would release the

energy equivalent of 3,000,000 pounds of coal and an explosive energy equivalent to 10,000 tons of TNT.

Drs. Meitner and Frisch communicated the news to Professor Niels Bohr, then in the United States, who lost no time in announcing it at a scientific meeting in Washington. In a matter of days the experiment had been corroborated in many laboratories throughout the country. Man at last had a key to the vast energy locked up within the atom.

It was soon recognized, on the basis of pure theory at first (presented by Prof. Bohr and Dr. John Wheeler of Princeton), that it was the U.235 that was being split. In a matter of weeks another vital discovery was made almost simultaneously in France and in the United States, namely, that when a uranium 235 atom is split by a neutron, additional neutrons are liberated from the split atom to continue the process of splitting other atoms, thus starting what is known as a chain reaction, one atom setting off another in the manner of a firecracker.

This second discovery immediately brought the ominous realization that uranium fission held the possibility of providing the most destructive weapon. Soon the frightening news began trickling out of Germany that the Nazis were concentrating on this very problem. Our physicists, particularly the exiles among them, headed by Dr. Albert Einstein, Fermi, Leo Szilard and others, brought the matter to President Roosevelt, who appointed a committee of experts to study the problem. Thus started the greatest race against time in history.

On Dec. 6, 1941, one day before Pearl Harbor, the preliminary work had progressed to the point where it was recognized that an all out effort was necessary if we were to stay in the race, as by that time it looked almost certain that Germany was at least one year ahead. By Dec. 2, 1942, a team headed by Prof. Fermi at Chicago demonstrated for the first time that a chain reaction was possible. This brought the race into its final and decisive phase.

To bring the work out of the scientific laboratory into large-scale industrial production a new Army organization, named the Manhattan Engineer District, was created and put in charge of Major General (then Brigadier General) Leslie R. Groves. Under his direction, and with the cooperation of scientists, industrialists and labor, was created the greatest industrial empire of its kind in history. From an initial appropriation of \$6,000, the project eventually spent a total of \$2,000,000,000, with plants covering hundreds of thousands of acres scattered over many parts of the United States and Canada. Scientists of many lands, including many exiles as well as British, Canadian and French scientists, worked against time to help win the race.

The main plants were in Tennessee, the State of Washington and at Los Alamos, New Mexico. There were also three great research centers established at Columbia University, the University of Chicago, and the University of California, as well as smaller research centers at more than a score of universities and research institutions.

The gigantic plants at Tennessee, located on a 59,000 acre tract at Oak Ridge, near Knoxville, were designed to concentrate uranium 235 by two different methods. The plants at Hanford, Washington, were designed to produce plutonium, a man-made element, also known as element 94, which is produced in an "atomic boiler" (known as an atomic pile) by allowing the neutrons liberated from the split atoms of uranium 235 to enter the nuclei of the atoms of the much more abundant uranium 238. One extra neutron entering the nucleus of the uranium 238 causes two of the neutrons inside the nucleus to become transmuted into protons, so that the nucleus now contains 94, instead of 92, protons. The extra neutron also increases the atomic weight from 238 to 239.

Plutonium 239 is as fissionable as uranium 235 and has the added advantage that it is a different element from uranium, so that it can be separated from its parent substance (uranium 238) by chemical means, which are much easier than the physical methods necessary to separate uranium 235 from uranium 238. The last two are always found in nature as a mixture and always in the same ratio of 140 parts of U.238 to 1 part of U.235. No possibility exists for finding a more concentrated source of the latter.

Both uranium 238 and thorium (atomic weight 232) are fissionable with fast neutrons but neither liberates enough neutrons to maintain a chain reaction. However, just as uranium 238 can be converted into plutonium 239, so thorium 232 can be converted into uranium of atomic weight 233, an element not found in nature, which has the same fissionable-chain reaction properties as uranium 235 or plutonium. The process for transmuting thorium 232 into uranium 233 is the same as the one for transmuting uranium 238 into plutonium. To do so, it is, of course, necessary to mix it with uranium 235 or with plutonium. Thus it can be seen that without uranium 235 to start with neither plutonium nor uranium 233 could be produced out of uranium 238 or thorium. In other words, a nation not possessing fairly large stocks of natural uranium could not produce either atomic bombs or atomic power no matter how much thorium it had.

By July, 1945, we had available both uranium 235 and plutonium in large enough quantities to produce atomic bombs of two types, the so-called Hiroshima and Nagasaki types. This, however, does not mean, as is generally believed, that the difference between them is due to the difference between uranium 235 and plutonium.

The first atomic explosion took place at 5:30 on the morning of Monday, July 16, 1945, in the bleak New Mexico desert on the northwestern corner of the Alamogordo Air Base. The first atomic bomb used in warfare was dropped from a B-29 on Hiroshima on Monday morning, 8:15 A. M., Hiroshima time. The second was dropped on Nagasaki three days later and brought the greatest war in history to a victorious end.

The estimates that the general effect of one atomic bomb would be equal to the explosion of 20,000 tons of TNT were borne out by later investigations on Hiroshima and Nagasaki. Hiroshima suffered 135,000 casualties, which included more than 50 percent of its population. It was comparable in size to Providence, Rhode Island, or Dallas, Texas. Nearly half, or 66,000 of the casualties, were deaths, the greatest number of which occurred immediately after the bombing. Nagasaki, a city of 196,000, suffered 64,000 casualties, of which 39,000 were deaths. Burns caused about 60 percent of the deaths in Hiroshima and 80 percent in Nagasaki. Falling debris and flying glass caused 30 percent of the deaths in Hiroshima and 14 percent in Nagasaki.

The investigation showed that the effects of the atom bomb on human beings were of three types: (1) Burns, including flash burns caused by the instantaneous heat and light radiation, remarkable for the great ground area over which they were inflicted. (2) Mechanical injuries, resulting from the flying debris, falling buildings and blast effects. (3) Radiation injuries, due entirely to gamma rays and neutrons emitted at the instant of explosion and similar to the results of severe X-ray overexposures. The investigations also revealed that no harmful amounts of persistent radioactivity were present after the explosions, this for the reason that both bombs were exploded at a considerable height from the ground.

The bomb explodes in the incredible time of one-tenth of a millionth of a second. At the center of the explosion the temperature reaches 100,000,000 degrees Fahrenheit, or about 10,000 times that of the surface of the sun. It produces pressures equivalent to many millions of atmospheres and creates winds traveling at about 1,000 miles per hour.

All energy is produced by conversion of matter into a state in which it can do work. In ordinary chemical energy, such as the burning of coal or oil, some of the outer electrons are converted into energy. In the case of atomic, or rather, nuclear energy, some of the matter of the protons and neutrons in the nucleus of the atom is transformed into an energy state. The only difference is that in nuclear energy the amount of matter thus transformed is millions of times greater. The transformation takes place according to the famous Einstein formula that the amount of energy in any given mass is equal to the mass of the substance multiplied by the square of the velocity of light ($E=Mc^2$). This reveals that one gram of matter is the equivalent in energy to 25,000,000 kilowatt hours.

In terms of explosives this means that one kilogram of U.235 or plutonium is the equivalent of 20,000,000 tons of TNT. However, in the process of fission only one-tenth of one percent (i.e., one one-thousandth) of the mass of each atom is converted into energy.

This means that the complete fission of one kilogram of U.235 or plutonium would yield an equivalent of no more than 20,000 tons of TNT. Since one one-thousandth of a kilogram is one gram (less than half the weight of a dime) it means that the conversion of that minute amount of matter into energy is sufficient to yield the destructive power of one atomic bomb. This does not mean, of course, that the atomic bomb weighed only one kilogram, for the matter of the bomb's efficiency, still a highly guarded secret, must be taken into consideration. The figure 20,000 tons-per kilogram represents an efficiency of 100 percent.

According to the unanimous opinion of scientists there can be no military defense against the atomic bomb. Nor can the secret be kept for more than five to fifteen years. Eventually, it is predicted, atomic bombs will be cheap and easy to make, so that a nation with the industrial capacity could produce them by the thousands. One atomic bomb attack, it was testified at a Senate hearing, could destroy overnight 40,000,000 of our population.

Two more atomic bombs were exploded over a target array of nearly a hundred naval vessels of all types at Bikini Lagoon in the Marshall Islands in what was known as Operation Crossroads. The first, known as Test Able, was dropped from a B-29 on June 30, 1946, while the second, known as Test Baker, was exploded under water, at an unrevealed depth, on July 24, 1946. The first test sank five ships and did serious damage to the superstructure of many more vessels placed at various distances from the explosion. The second raised a gigantic column of 10,000,000 tons of water, sank two battleships and one aircraft carrier (the *Arkansas*, *Nagato*, and *Saratoga*), and several smaller vessels; also, as was expected, it did major damage to the hulls of many more ships. The tests were so conclusive that a deep under-water test, scheduled for 1947, was called off as unnecessary.

The tests revealed that the atomic bomb has revolutionized naval warfare as it did land warfare. They showed that radical changes were necessary both in the design of ships and in naval tactics. Ships in a harbor would be particularly vulnerable. Amphibious warfare, such as in the last war, would become suicidal against an enemy possessing atomic bombs. The radiations alone from several atomic bombs, dropped low, or exploded under water, would be enough to destroy an armada such as landed on the Normandy beachhead.

Even before the bomb was used it was realized by those in the know that some method of international control would have to be worked out if civilization was to be protected against possible annihilation. After meetings at Washington and at Moscow it was agreed to create an Atomic Energy Commission under the auspices of the United Nations. In April, 1946, the now famous report by the board of consultants of the Secretary of State, of which David E. Lilienthal was chairman, was made public. This report was later adopted in principle, with some additions, as the official policy of the United States, and was formally presented as such by Bernard M. Baruch, United States Representative on the Atomic Energy Commission, before the commission's first formal meeting on June 14, 1946. At about the same time a bill providing for domestic control of atomic energy, placing control in the hands of a five-member civilian authority to be appointed by the President, was passed by Congress and signed by President Truman who appointed Mr. Lilienthal as chairman.

The United States plan makes the distinction between "dangerous" activities, such as the production of fissionable material that can be used for atomic bombs, and "safe" activities, namely, the development and use of atomic energy for peaceful purposes. This distinction is fortunately possible because of the two different processes involved. To produce atomic bombs it is necessary to have concentrated uranium 235, plutonium, or uranium 233 (made from thorium). To produce atomic power for industrial, medicinal, or other peacetime uses, diluted, or "denatured" material could be used. In this connection it must be remembered that whereas a nuclear explosion involves an uncontrolled chain reaction with fast neutrons, traveling at thousands of miles per second, the pro-

duction of atomic power for peacetime uses involves a controlled chain reaction with slowed down neutrons, traveling at only one mile per second.

The plan therefore calls for the creation of an Atomic Development Authority by the United Nations which would have complete control over all the activities pertaining to the production of dangerous materials. This, of course, means control of all uranium and thorium mines anywhere in the world, as well as control of the plants producing fissionable materials in pure form. These materials, when produced by the ADA, would then be "denatured," that is, diluted with isotopes, to such an extent that they could no longer be used for atomic explosives but could still be very useful for beneficial purposes, such as the production of atomic power, new elements for industry and medicine, research, etc. These "denatured" materials the ADA would distribute to authorized users among the nations of the world.

To make certain that no unauthorized uses are made of the "denatured" materials a system of rigid international inspection is called for and swift sure punishment for violators. To provide sure and swift punishment for violators, Mr. Baruch added the stipulation that as far as the subject of atomic weapons is concerned there must be no veto to obstruct swift and effective action.

The Soviet delegate, Mr. Andrei A. Gromyko, described the plan as unacceptable. He proposed instead a treaty to outlaw atomic bombs, destruction of all atomic bombs within three months after the signing of the treaty, with each nation to supervise its own system of controls and punishment for violators.

The advent of atomic power promises to open a new era. It will not be possible to use a power pill to drive cars or planes because amounts less than what is known as "critical mass" cannot be used and because massive shielding is required as a guard against radiation.

On the other hand it will be possible to build large power plants for generating enormous quantities of power in cities as well as in ships. It could be used to irrigate wastelands where neither coal, oil or water power is available and turn deserts into blooming gardens. It could be used to air-condition the tropics and make sub-Arctic lands habitable.

Power is the least of the promises of atomic energy. It holds greater promise as a key to the mysteries in nature. With it man can create elements at will for use in industry and medicine. Ordinary elements can be made radioactive and used effectively in cancer treatment. Already radioactive iodine is being used to treat cancer of the thyroid.

Certain elements can be used as "tracers," or "tagged atoms" for probing some of the mysteries of nature. With atomic energy, for example, we can make a new type of carbon, of atomic weight 14 instead of 12 which, since it is distinguishable from ordinary carbon, permits tracing of its course in the living body of plant, animal and man. We may find out why and how we get cancer, for example, and the means to prevent it and cure it. We may find out why we grow old and how to postpone the coming of old age. We may learn why chlorophyll, the substance that makes grass green, is the only agent in nature that knows the secret of harnessing energy from the sun for the creating of the food on which we live. It is this ability to store solar energy that gives us the coal and oil we use for energy. Since chlorophyll has carbon atoms in its make-up, carbon 14 may help us to learn how to create food from simple substances, as a plant does, and how to harness solar energy.

With atomic energy man at last has a fuel with enough power to lift him beyond the region where the earth's gravity can pull him back. He thus at last has a fuel for a space ship to carry him to the moon and the planets. This is not to say that the interplanetary era is "just around the corner," but its faint shadow is already discernible.

Man stands at the gateway of a new world provided he does not commit suicide in the meantime.

THE PHYSICAL SCIENCES

64

BERNARD JAFFE

author of *Men of Science in America*, *Crucibles*, *Outposts of Science*

ON JANUARY 10, 1946, men made contact with the moon for the first time in history. Army scientists at Belmar, N. J., shot a beam of high-frequency radio pulses through the hitherto impenetrable ionosphere. The radar waves struck the moon and bounced back to the earth. A series of jagged, saw-toothed lines on an oscilloscope showed that the round trip of about 477,000 miles had taken 2.4 seconds, exactly as calculated. Predictions soon followed the startling news. Men would map the moon, contact planets, and prepare for interplanetary communication.

Fundamental research during 1946 in fields other than electronics and atomic energy was less fruitful because many men had turned to these exciting fields. Besides, most of the key European centers of research, crippled during the war, had just revived.

Astronomy

Least affected by the war were the astronomers, most of whom never left their telescopes. Two new comets were reported. A scientist in New Zealand and a Washington, D. C., businessman found them in the constellations of Puppis and Cygnus. Yerkes Observatory announced a new explosion of the star or nova, T. Coronae Borealis, and the University of Arizona added six more superheavyweight stars (hundreds of times denser than steel) to the eighteen already known. Mt. Wilson Observatory presented final proof that the sunspot cycle was completed in 22 years rather than in eleven. The *Dreamboat*, flying nonstop from Honolulu to Cairo across the Arctic, confirmed that the north magnetic pole was 200 miles nearer to the geographic pole. Harvard's Dr. Bok proclaimed the universe not much older than the earth—a mere 3 billion instead of 5 billion years. And even a new astronomical landmark was rising on Mt. Palomar in California with the completion of the 200-inch telescope, another landmark in astronomy was being abandoned. For the 271-year-old Royal Greenwich Observatory was transferred from London to Sussex, 15 miles east of the prime meridian. The world, however, will still fix its time to *Greenwich* mean time.

Physics

In the desert area of White Sands, New Mexico, 14-ton German V2 rockets were sent flaming into the air, their warheads filled with instruments for gathering data on mesotrons. These little-understood particles thrown out of the hearts of atoms by cosmic rays hold many of the secrets of the atom's nucleus. Attaining speeds of 3600 miles per hour the rockets reached altitudes as high as 105 miles. Mesotrons were also tracked by M. I. T. scientists who went aloft in B-29s. But these studies were limited. They depended upon the capture of a few mesotrons produced by cosmic rays coming from interstellar space.

A much more effective method for the study of mesotrons was made possible by the building of the first *synchrotron*, the most important single development of the year in atomic research. The synchrotron is a cyclotron to which the principle of frequency modulation used in radio transmission is applied to increase its power. The new feature was first suggested by a Soviet scientist, V. Veksler, and independently introduced by Edwin M. McMillan in the laboratory of Ernest O. Lawrence, inventor of the cyclotron. It was first applied to Lawrence's 37-inch cyclotron, and will be applied later to the huge 184-inch cyclotron now nearing completion. It is expected that particles will be accelerated in this machine to energies equivalent to 400,000,000 electron volts, powerful enough to produce mesotrons for laboratory study.

Another new type of atom-smasher called a *linear accelerator* was constructed by Luis W. Alvarez. This 40-ft.-long experimental model is capable of supplying energies of 40,000,000 electron volts. The machine can be increased in size to 1000 feet or more to furnish energies equivalent to a billion electron volts which supply streams of mesotrons.

In RCA laboratories the magnification of the electron microscope was doubled to 200,000 diameters, a magnification which would blow up the thickness of a postage stamp to the height of a twenty-story building.

A new standard of measurement was suggested. Instead of the red cadmium line adopted in 1893, it was proposed to use the green line of the unstable mercury isotope 198 prepared by the modern alchemy of bombarding gold with neutrons. The new line is 10 times finer, possible measurements as tiny as one billionth of a centimeter.

Chemistry

On August 2 the first allotment of a by-product of the atomic pile for peacetime use was made at Oak Ridge, Tennessee. On this historic occasion five tiny bits of radioactive Carbon 14 were distributed among Nobel prizeman James Franck of the University of Chicago, and research workers at the Barnard Free Skin and Cancer Hospital of St. Louis, the University of Minnesota and the Medical Schools of the Universities of Pennsylvania and California. Cyclotrons also made available additional quantities of artificially radioactive isotopes including sodium, potassium, phosphorus and iron which were used as tracer elements in the further study of photosynthesis, gangrene, cancer, diabetes and blood, muscle, liver and brain.

Synthetic chemistry continued to add to its tens of thousands of new creations. Cane sugar was prepared synthetically for the first time by chemists who also synthesized two sugars never before known. New derivatives of streptomycin, penicillin and DDT were born in the chemists' test tube. Dr. Vincent du Vigneaud and his associates at Cornell synthesized penicillin. *Aralen*, a new substitute for quinine, developed with the aid of human guinea pigs, was made available to the public for the first time. A new "palatability" vitamin, Nutrient X, found in milk, eggs, liver and beef, came out of the laboratories of our Department of Agriculture to be added to the 16 vitamins already recognized. The 25-year-old search for the chemically pure growth hormone ended when Chio H. Li, working with several associates in the laboratory of Herbert M. Evans, prepared it from the anterior lobes of the pituitary glands of cattle. Rats, injected with this hormone, grew to giant size. The credulous even talked of a race of giant men springing up at the prick of a hypodermic.

After several weeks of uncertainty the two man-made elements Nos. 95 and 96 were named *Americium* and *Curium* by their codiscoverer, Glenn T. Seaborg. The synthesis of elements 43, 61, 85 and 87 formerly known as masurium, illinium, alabamine and virginium was also reported, bringing the number of chemical elements discovered and named by Americans to seven.

Technology and Engineering

The most important advance in technology and engineering was the first study of power production from a high temperature atomic pile undertaken at Oak Ridge. Other progress centered around further developments in the peacetime role of electronics including radar, another lusty child of the war, and jet and rocket propulsion. *Loran*, a radio location network, was greatly extended to enable ships and planes to determine their positions quickly and accurately. *Shoran*, another wartime device began charting the earth's surface. Further use of radar to prevent collisions at sea was reported. The *S. S. City of Richmond* on Chesapeake Bay was equipped with radar designed to show obstacles through fog and blackness within a range between 100 yards and 32 miles. A new attack on the problem of weather forecasting was resumed when the U. S. Weather Bureau extended the use of this radar weapon. Flying daily from Florida, Newfoundland, the Azores and California, special radar-equipped planes watch their scopes for approaching storms and other weather conditions over the ocean within 200 miles.

To increase the range of television broadcasts, General Electric and Westinghouse engineers took to the air in planes and blimps. Flying as high as 6 miles they hope to increase the present range of 50 miles to 200. Latest developments in television and air navigation were combined in a single system known as *teleran* which was given its first public test at Indianapolis. This system enables a pilot to watch a screen in front of him showing storms ahead, land obstacles, and other planes in flight, and guides him to a safe landing even in total darkness.

New turbo-jet engines powered the XP-84 *Thunderbolt* which flew at 611 miles per hour. The Navy tested a new 210-lb. rocket motor for supersonic planes. This motor is fueled with alcohol and liquid oxygen, like the V2, and generates power equivalent to that of all the engines of a B-29. New British and American planes powered by jet and rocket engines were built to fly at speeds greater than that of sound. One of these supersonic planes tested was the Army-Bell XS-1. To help in these developments the largest and most modern wind tunnel was opened at Moffett Field, California. It is capable of producing wind up to 1500 miles per hour, or twice the velocity of sound at sea level.

Supersonics for dispelling fog over air fields was successfully tested at Arcata, California. Inaudible sound wave vibrations of 20,000 to 40,000 cycles per second were used in these tests. A magnetic detector first used against submarines was developed and successfully used on planes for rapid and accurate prospecting of oil deposits lying under the American continental shelf recently placed under Federal jurisdiction.

Cooperation Among Scientists

Cooperation among world scientists was resumed. The International Astronomical Union convened again in Copenhagen. Representatives of 13 nations including the United States, Great Britain and the U. S. S. R. recommended the creation of an international astronomical observatory under the U. N. O. A bill for the creation of a powerful National Science Foundation was passed by our Senate. The social awareness of men of science as illustrated by the activities of the Federation of American Scientists was more widespread. And 1946 took time out to celebrate two important centennials—the first public demonstration of the use of ether in surgery, and the establishment of the Smithsonian Institution.

CONSIDERATIONS • 1946

by

CHRISTOPHER MORLEY

author of *Thunder on the Left*, *Kitty Foyle*, etc.

LITERATURE is a social phenomenon, especially in a country so quick on the intercom as U. S. A. Here and now it cannot be intelligibly discussed without some suggestion of its civilian background. Even if a book were withdrawn on publication day, it has already been read by dozens or hundreds of communicative people: typists, editors, printers, reviewers, even a few ambitious and inquisitive booksellers. Even if never technically published, it might have more eventual influence than many smart sellers. The first point to suggest is that 1946 is unusual for the great books that were not published. They may have been written or in course of writing, but they don't seem to have got into public print.

Paper wasn't the only shortage.

The American muse, of strong and diverse heart, as Steve Benét said, was in 1946 drinking gin and eating horsemeat; uttering hyperthyroids of pain, or else climbing backward and upward for anesthetic in Henry James and Sherlock Holmes and Alice-in-

*The publisher and the reader of this almanac are asked to remember that this is a personal memorandum. It is not a complete or official summary. It is based on a list of U. S. book publications, January to September 1946, supplied by the Saturday Review of Literature. It is individual testimony, as impromptu as sincere, bearing only upon what I myself had time to read. *Caveat lector.*

Wonderland.† For the first time in a number of years, the current product in books was so obviously second-rate that older classics were rediscovered and reprinted in good supply. For instance, those two not altogether dissimilar prophets, Walt Whitman and archy the roach. Probably our greatest loss, in one vein, was that archy could not be here to comment on the Truman-Wallace episode. By the way, it required the social spasms of Europe in 1848 to start Walt Whitman thinking. Perhaps by 1948 someone else may have been startled into a fresh and new imagination of the world—The Mother with her Equal Brood. I give us until 1948, but not much longer, to find it.

Literature is a stream and not a series of parcels. It can't be chopped off into annual trial balances. Ink is hypersensitive stuff; it quickly shows the stains of fatigue, confusion and bile. Throughout these months we have suffered the universal cat-fever of melancholia and dismay. As at Vienna in 1815, or in London in 1919, everyone danced. The popularity of ballet is always diagnostic. To repeat an old social apothegm (my own), after Talleyrand comes Sally Rand. Another form of social *Angst*‡ was the emphasis laid upon the modes and manners of teen-agers. It was as if mortal conscience knew these kids might not have long. Give them a whirl while possible.

Under these conditions literature behaved as any analyst would expect. There was more jeebie than Hebe.§ The human mind was in exactly that tizzy familiar to us all: when you know you have just laid something down but can't find it. I had it in my hand a moment ago, where did I put it? Peace was like that. For a few weeks we had it and somehow it got mislaid. The usual human instinct in such episodes is to blame someone. We have been trying to satisfy ourselves by blaming Russia. But needling Russia is like needling a haystack. The oecumenical familiar phrase of the year was "coming apart at the seams."

All this clumsy, but I hope intuitive, comment is relevant to literature. One of the most deeply interesting pieces I read in 1946 was by Professor Ralph W. Gerard, neuro-physiologist at the University of Chicago. *The Scientific Monthly* (June, 1946) reprinted his lecture on "The Biological Bases of Imagination." He pointed out, what was flashing-new to me, that the word "consider" literally means to see the stars in groups or patterns and not as random sprinkles of light. So for my own consolation I am trying to find some design for stargazing. Why was it, for instance, that in 1946 Shakespeare was suddenly recognized as the greatest scenarist for moving-pictures that ever lived? This could only be because many of those actually drawing salary were so appalling? Why is it that "The Tempest," the greatest political fable ever written, is getting ready to be re-revived? There is hardly a stick of type in it that does not dance on a White House desk. Miranda might be speaking for Joe Stalin after Bikini:

"Still it is beating in my mind, your reason
For raising this sea storm?"

When politics goes astray, it is because its practitioners never took the arts seriously.

Nineteen Forty-six was a busy and, I believe, a prosperous year in the Book Trade. It was a reasonable phenomenon that the top merchandise package was the simple jocose relief of "The Egg and I," where no one got shirred except a husband. But few American works of imagination in 1946 are likely to be recognized or remembered, say, two years hence. There is a possible exception, Christopher LaFarge's under-emphasized portrait of the old New England shrew in two hurricanes ("The Sudden Guest"). As well as I remember, LaFarge never labored the idea that these local cyclones might symbolize the two great mortal storms of our time. Consequently, his

†It was no coincidence but pure symptom of instinctive need that 1946 began with Brooke Cadwallader's Tenniel scarf and ended with the beautiful two Alice volumes as Book-of-the-Month Club dividend. The student of literary moeurs can often get cross-bearings on the intellectual taste of a period by watching what people wear. Mr. Wakeman in "The Hucksters" did an excellent job on hand-painted neckties as a symbol. Any analyst of international affairs may well have been anxious in seeing the present haberdashery of high officers in Washington.

‡Cyril Connolly's phrase. I wish Connolly were an American so I could pay him tribute. To my completely private taste, his "The Unquiet Grave" was one of the most significant books of the year. Significance came through, as it rarely does in an American writer, completely without shame.

§Footnote for *Information Please*: Hebe, the sommelière of the gods.

story—though he fractured the spell by an interpolated narrative—acquired the coefficient of expansion of true art. In dealing with true art, the more we think about it the stronger it is for us, and we for it. "All the King's Men" by Penn Warren was a novel of fine conscience and power, but rather dense reading.

Storm of all kinds is the only consideration I can figure. Like Alcoholics Anonymous, Mental Castaways Anonymous were blown to and fro. The year began hung over in the psychosis of "The Lost Weekend," which had just been done (brilliantly, they tell me) in the movies. Its author was finishing another remarkable clinical study in which more than a Weekend was lost; indeed, the Hormone itself. There followed the erotic storm of "Hecate County," the cerebral storm of "The Snake Pit," the account executive storm of "The Hucksters." Then there was Mr. Saroyan's typhoon of beatitudes, Mr. Bromfield's parching wind of agronomy, and a notably entertaining theosophist typhoon in the biography of Madame Blavatsky (an uproariously comic book).

Speaking of storms, perhaps the best barograph was a book both written and published without the least overt intellectual pretension, Mr. Gresham's "Nightmare Alley." The introductory quotes from T. S. Eliot and Petronius are not pretension but a windshield. In this biography of a carnival fakir he shows us a snake pit with real snakes. His greatest achievement is the sordid or obscene accident in boyhood which becomes a "compulsion" and explains his hero's switchback career. This is a book for the obstinately charitable, but it has moments that raise horror to Rabelaisian belly-laugh. As much as anything in the book, I admired the publisher's blurb; it told me: "written with casual and contemptuous dispassion." This, together with "The Sudden Guest," is my private nomination as a book that might, however painfully, be remembered.

Beside these strong brews, the sober narrative virtues or critical surveys had slow going. Some of the best writing, as is natural, dealt with the unalterable sea. Mr. McFee's "In the First Watch," for instance, a book of deeply brooded fidelity to an ancient tough tradition, pawky in humor sometimes too stinging for the landsman. Captain Karig's "Battle Report," and Sheean's "This House Against This House," and Dos Passos' "Tour of Duty," and John Mason Brown's mellifluous "Seeing Things," and Greenslet's "The Lowells," and Justice Jackson's "Case Against the Nazi War Criminals" were, among others, books that had in various ways survived what Lewis Mumford calls "the ordeal of reality." Taking a skywide view, it might be that some of the last pieces of Ernie Pyle were as important as more meditated things.

A book Ernie Pyle would have loved and whose inside attitude is much the same, is "Mr. Roberts," by Thomas Heggen. It is a frank, humane, and gorgeously humorous study of the hypertensions among a ship's crew at sea. The *Reluctant* was a Navy cargo ship on rackingly tedious duty among South Pacific islands. I don't believe the peculiar gripes of enforced celibacy have ever been so blithely and so touchingly laid bare. Bare is the right word; what an interesting evidence of our shifting ethics that these brilliantly carnal-spiritual sketches could have been first printed in the *Atlantic*. This book should be required reading at Annapolis, and I would love to see it reviewed by some brass hats of the Royal Navy. In a delightful way, "Mr. Roberts" makes a perfect companion for Mr. McFee's story of cargo vessels of an earlier era. What the sea does to men does not change, and both these books have (Mr. Heggen will understand) the birthmark.

The year comes toward its close with the reprint in book form of John Hersey's nobly detached, matter-of-agony report on Hiroshima. But as far as creative imagination goes (and it can go a long way) the published work of the Americans in the past year has been disappointing. It has been mostly in what my Japanese friend Mrs. Sugimoto calls "the ashen district." No wonder; and its marks of pain and doubt are probably wholesome. If our belles-lettres of 1946 had been a Grecian urn of fair attitudes we would truly have cause for despair. Any number of symbolic anecdotes might be offered, but I think the one that amused me most was Harry Hansen's account of the suitcase that turned up at Scribner's. It bore the name and Cuban despatch tag of Mr. Hemingway. There was jubilee in the editorial office. Here at last, they exclaimed, must be something

really good, Hemingway's new novel. The bag was locked but publishers have passkeys to everything. They prised it open and found two old pairs of fishing pants.

But somehow 1946 was the kind of year when in happy secrecy something fine might well be under way. Professor Gerard quotes Professor Lowes: "Out of chaos the imagination frames a thing of beauty." Chaos we had more universal than ever before. When toxins are so strong, antibodies are probably at work.

So, for 1947, Imagination Please.

ANISFIELD-WOLF AWARDS

The Anisfield-Wolf Awards for the best books on race relations were established in 1935, and the first award was made in 1936. They are derived from a fund provided by Edith A. Wolf of Cleveland in memory of her father, John Anisfield, and her husband, Eugene E. Wolf. The original award was for \$1000, but beginning with 1942 the amount was doubled, and since that time it has been doubled annually between two books. Selections are under sponsorship of The Saturday Review of Literature.

- 1936—"Negro Politicians"—By Harold F. Gosnell
 1937—"We Europeans: A Survey of Racial Problems"—By Julian S. Huxley and A. C. Haddon
 1938—"We Americans"—Elin L. Anderson
 1939—"The Negro College Graduate"—By Charles S. Johnson

- 1940—"Negro Family in the United States"—By E. Franklin Frazier
 1941—"From Many Lands"—By Louis Adamic
 1942—"Quest"—By Leopold Infeld
 "The Haitian People"—By James G. Legburne
 1943—"Dust Tracks on A Road"—By Zora Neale Hurston. "Negroes in Brazil"—By Donald Pierson
 1944—"The World of Sholom Aleichem"—By Maurice Samuel. "New World A-Coming"—By Roi Ottley
 1945—"Earth and High Heaven"—By Gwethalyn Graham. "An American Dilemma"—By Gunnar Myrdal
 1946—"One Nation"—By Wallace Stegner and the Editors of *Look*
 "Black Metropolis"—By St. Clair Drake and Horace R. Cayton

RARE BOOKS AT AUCTION

Prices at 1945-46 auctions:

- LEWIS CARROLL'S original manuscript of "Alice's Adventures Under Ground," which he later expanded into "Alice's Adventures in Wonderland" \$50,000
 FIRST FOLIO SHAKESPEARE, London, 1623 (the Manley-Earl of Rosebery-Hogan copy) \$50,000
 "ALICE'S ADVENTURES in Wonderland," London, 1865 (corrected sheets of suppressed first edition, with ten original drawings by John Tenniel) \$23,000
 CHAUCER'S "Canterbury Tales," London, 1478 (first edition, printed by William Caxton, a defective copy) \$13,000
 BUNYAN'S "Pilgrim's Progress," London, 1668 (first edition) \$8,000

- "ALICE'S ADVENTURES in Wonderland," London, 1865 (presentation copy from the author) \$7,500
 MILTON'S "Paradise Lost," London, 1667 (first edition, first title page) ... \$6,500
 SPENSER'S "Faerie Queene," London, 1590 (first edition) \$6,000
 GRAY'S "Elegy Written in a Country Churchyard," London, 1751 (first edition) \$4,500
 THIRD FOLIO Shakespeare, London, 1685 \$4,500
 WALTON'S "Compleat Angler," London, 1653 (first edition) \$4,400
 HOLY BIBLE, Authorized (King James) Version, London, 1611 (first edition) \$4,000

THE THEATRE • 1945-46

64

JOHN MASON BROWN

drama critic of the Saturday Review of Literature
and author of *Seeing Things, To All Hands, Many a Watchful Night*

NEW YORK DID NOT have America to thank for its most memorable evening in the theatre last year. That evening came late in the season, after months of waiting; indeed, as late as the twentieth of May. It was then that London's Old Vic Company, having won acceptance rather than created fervor by its productions of the two parts of *Henry IV* and *Uncle Vanya*, presented Sheridan's *The Critic* and *Oedipus* as a double bill.

It was then, too, especially in Yeats's version of the Sophoclean tragedy that Laurence Olivier proved himself to be more than a capable actor possessed of extraordinary versatility. His Theban king represented a great part, greatly comprehended and projected. The two terrible groans, which escaped from him as from a clubbed animal when at last he understood his guilt, were exceeded in their frenzy only by the bravos with which Mr. Olivier was cheered at the curtain's fall. In a Greek play, written nearly twenty-four hundred years ago and acted by a British company in the spirit of its original writing, the New York theatre of the first winter after World War II found not only its finest performance but its most authentic thrill.

Another Greek play, by the same author, provided Broadway with its most exalted reminder of what America had been spared during the recent struggle. This was the *Antigone*, that ageless tale of tyranny which, in Jean Anouilh's modern adaptation, had meant much to Parisians in the war years. Into the very ears of the Nazis it released a battle cry for liberty in an occupied Paris. The tragedy was thought cold and difficult by many here. On the whole, too, it was coldly received in spite of the admitted excellence of Katharine Cornell's *Antigone* and Cedric Hardwicke's *Creon*. But to those willing, and able, to forget the comfortable security of America and remember the recent agony of the Old World, it could claim both heat and grandeur. Not only as a commendable experiment in the theatre but as an experience, however vicarious, in the feelings of a conquered people.

The war's nearness cast its inescapable shadow over the entire season. It explained the continued absence of new, young talents, and the confusion with which older playwrights approached a world once again supposedly at peace. It also explained why revivals contributed to the season more than their usual quota of interest.

Maurice Evans, for example, recently out of the Army where he had played the Dane to troops in the Pacific, brought his G.I. *Hamlet* to Broadway. Once the champion of the uncut text, Mr. Evans now appeared in so truncated a version that Ophelia was left unburied and Yorick unremembered. But, regardless of what subtleties were lacking in it, a jeep dashing up a mountain could not have moved in a livelier fashion than this production did as a melodrama, when it sped from climax to climax. Mr. Evans's extrovert prince made clear again a welcome fact. He is an actor who is not afraid of acting. Furthermore, he is able to do full justice to the beauties of Shakespeare's verse.

Another revival was equally successful. It was Shaw's *Pygmalion* as done by Theatre Incorporated, that promising new producing group which sponsored the Old Vic's season. Gertrude Lawrence was the evening's Eliza Doolittle, and a highly satisfactory one. There were, of course, other revivals. Miss Cornell was seen briefly in *Candida*. The Theatre Guild staged a pedestrian *Winter's Tale*. Miss LeGallienne appeared in Thomas Job's adaptation of *Thérèse*, Zola's guignol which long ago had scandalized New York but which now seemed very tame compared to Mr. Job's own *Uncle Harry*. Such old musicals as *The Red Mill* and *Show Boat* won huge audiences. And Bobby Clark scraped, ogled, grunted, and capered as Monsieur Jourdain in a slapstick version of *The Would-Be Gen-*

tleman which, though it might have baffled Molière, delighted Mr. Clark's large and ardent circle of fans.

The test of a theatre's health does not lie in its revivals. They can be fine indications of its skill. But, before a theatre can be said to be really alive, new playwrights must be heard from, speaking for their own day. It was precisely here that the season, though entertaining, was at its weakest. Managers appeared to be frightened away, for example, from war scripts. Rightly or wrongly, they thought the public had had enough. Even so, among the year's most interesting offerings were several which did not turn their backs on the war. One of these was Harry Brown's *A Sound of Hunting*, about a group of G.I.'s at Cassino. Although the drama was marred by the inclusion of a woefully overdrawn correspondent, there were those who were convinced that its dialogue was the best soldier talk to have been heard hereabouts behind the footlights since *What Price Glory?*

Another war play was *Home of the Brave*. It was a poignant psychiatric case history by Arthur Laurents. It also sought to deal with anti-Semitism, and was hurt rather than helped by having taken aim at two targets instead of one. Irwin Shaw's *The Assassin* dealt with the Darlan affair. To those who had neither been in North Africa nor followed the case closely it seemed incredible. Which was a pity. Because, in spite of its faults, it merited a longer run than it achieved. Significantly enough, the production dealing with the war which was most enthusiastically received was *Call Me Mister*, a fast-moving and hilarious revue about separatees. It was staged and presented by a group of talented young people who were themselves just discharged from the services. It offered an uproarious, sometimes sobering, journey on the "Going Home Train."

Although escape seemed to be Broadway's contribution to reconversion, the theatre did dare to face certain problems, some topical, others of long and ugly standing. Four times—in a dramatization of *Strange Fruit*, in *Jeb*, in *On Whitman Avenue*, and in *Deep Are the Roots*—it endeavored to grapple with the race problem. Well-intentioned as these attempts were, most of them were inept. Indeed, of the four only Arnaud d'Usseau's and James Gow's *Deep Are the Roots* succeeded dramatically. It may have been unblushingly melodramatic as it recounted the indignities and horrors to which a gallant Negro lieutenant was subjected when he returned to his home in the far South. But it could claim this virtue. Both as written and as acted it riveted the attention of an audience.

Two comedies concerned themselves convulsingly with American politics. One of these was Garson Kanin's *Born Yesterday*; the other Howard Lindsay's and Russel Crouse's *State of the Union*. Both were slick and canny products of our showshops. And both, beneath their gagging, made serious pleas for the need of idealists in our political life. It was to *State of the Union* that the Pulitzer judges gave their prize. Although both of these comedies won votes from some of the drama critics, the Critics Circle gave no award. In their group opinion the season was not prize-worthy. They contented themselves with conferring a citation upon *Carousel* as the year's outstanding musical play.

Needless to say, there were successes. The Lunts rightly scored one of the most glittering triumphs of their triumphant careers because of the perfection of their joint playing in Terence Rattigan's *O Mistress Mine*. Louis Calhern and Dorothy Gish were widely applauded for their performances as Justice and Mrs. Holmes in Emmet Lavery's heart-warming biographical play, *The Magnificent Yankee*. In *Dream Girl* Elmer Rice pleased many playgoers by providing for his wife, Betty Field, more parts than most monologists play in their entire lives. And in *Lute Song*, a Broadway version of a venerable Chinese classic, those who rejoice in spectacles (and even those who don't) could not fail to be impressed by the beauty of Robert Edmond Jones's settings and costumes.

In the realm of musicals, the calliopic Ethel Merman swept everything and everyone before her as Annie Oakley in *Annie Get Your Gun*. Among the other contestants in this field *The Day Before Spring* achieved a comfortable run. So did *Are You With It?*, *Three to Make Ready* with Ray Bolger, and *Billion Dollar Baby*. Four musical comedies, however, scored the most resounding flops, each to the reputed tune of over \$200,000.

Business was good, if art on the whole was indifferent. The season was unlucky for

such of the older playwrights as Robert E. Sherwood, S. N. Behrman, George Kelly, and Maxwell Anderson. Mr. Anderson's *Truckline Cafe*, however, cannot be set down as a complete failure inasmuch as the reviews it received provoked Mr. Anderson into describing the critics as members of the "Jukes family of journalism"—a phrase that threatens to be adhesive.

Hopes are already high for the next season. Eugene O'Neill has broken his thirteen-year silence with *The Iceman Cometh*. Most of the older dramatists have new plays in which they believe. At least two repertory organizations are being formed. And thousands of young people are back from the war. The optimists pin their faith on them, remembering how, after World War I, the American theatre flowered.

CONCERT MUSIC 1945-1946

OPERA REVIEW 1945-1946

by

DEEMS TAYLOR

critic, composer and author of *Of Men and Music*

IN THE MARCH of musical seasons, the one of 1945-1946 will be officially noted as the first of the new peacetime. As it occurred, however, it was easily recognizable as the last of the lingering wartime. There was the same dependence on performers, native and foreign, who had lived here during the war years; the same multiple appearances by celebrities not yet able to resume touring the world.

Beginning its 104th season with a program that included Aaron Copland's "Appalachian Spring," the New York Philharmonic-Symphony Orchestra sounded a note that echoed repeatedly in other orchestral activities elsewhere. The same work was included on the opening program of the Cleveland Orchestra, and was played by the Boston Symphony at home and on tour, and by a dozen other organizations in the course of the year.

From the dozens of new American works presented in New York during the year, the members of the Music Critics' Circle selected Samuel Barber's cello concerto as the best they had heard. It was played for the first time at an April matinee of the Boston Symphony Orchestra, with Serge Koussevitzky conducting and Raya Garbousova as soloist.

Another native work of consequence was Marc Blitzstein's "Airborne" Symphony, for orchestra, narrator, chorus and soloists, which was introduced by Leonard Bernstein and the New York City Symphony at the City Center. Planned by the composer while serving as a member of the 8th Air Force in England, it was not completed until he had returned to civilian life. Orson Welles was the narrator at the first performance. Another memento of army life was Barber's setting of Stephen Spender's "A Stop Watch and an Ordnance Map" which the Collegiate Chorale, directed by Robert Shaw, sang with great effect at a Carnegie Hall concert.

The most sizable of the foreign novelties was Serge Prokofiev's fifth symphony, first played in New York by the Boston Symphony, repeated at a later visit, and offered by Artur Rodzinski to the audiences of the Philharmonic-Symphony Orchestra during its subscription season. Igor Stravinsky brought a new symphony with him when he served as guest conductor of the Philharmonic, and Roy Harris appeared to conduct his own "Memories of Childhood," dedicated to a small son of the music director of the same orchestra.

The other orchestras and conductors offered plenty of standard fare. In their own cities, the leading organizations paid tribute to the masters as follows: Beethoven (Philharmonic, 12, Philadelphia, 10, Boston, 9); Tchaikovsky (9, 6, 5); Brahms (6, 9, 6); Wagner (9, 10, 6); Mozart (6, 5, 6). Bruno Walter contributed his own kind of novelty to the New York season by conducting two symphonies of Mahler—the 9th with the Philharmonic, the 4th with the Philadelphia.

In other respects, the symphonic season in New York was marked by Leonard Bernstein's succession to Leopold Stokowski as director of the City Symphony. In spite of a disorderly schedule and limited rehearsal time, he maintained a surprisingly high quality of performance, a tribute both to his talent and the enthusiasm of his players. Most of his programs blended contemporary works of established favor—such as Milhaud's "Creation of the World"—with standard works not over-played—such as Schumann's Symphony No. 2.

In common with orchestras elsewhere, those of New York, Boston and Philadelphia marked the death of Bela Bartok (shortly before the opening of the season, in September 1945) with performances of works written by the eminent Hungarian composer dur-

ing the final years of his life, while a resident of this country. The remarkable vitality of the music was uniformly commented upon by the press, and a skeptical public responded with enthusiasm to music of its own time which spoke with timeless accents.

Following the completion of the season in its own city, the Philadelphia Orchestra undertook one of the longest tours in American orchestral history, a tour that extended as far west as Vancouver, British Columbia, and as far south as New Orleans—altogether a total of 39 appearances in 30 cities. Washington made its own kind of symphonic news when a performance of Beethoven's Ninth Symphony included in the audience President Truman and members of his family. It was noted with wonder that the President followed the progress of the music from a score.

A major change in the symphonic line-up occurred in midwinter with the announcement that George Szell, a member of the Metropolitan Opera's conducting staff, would succeed Erich Leinsdorf as music director of the Cleveland Orchestra. The oft-rumored retirement of Koussevitzky from the Boston Orchestra loomed again on the horizon, stimulated by the announcement that he would limit himself to thirteen weeks' conducting in the season to come.

Arturo Toscanini, at 79, continued to provide the most virile and enlivening performances to be heard anywhere in his several series of appearances with the NBC Orchestra, broadcast through the sponsorship of the General Motors Corporation. As a special observance of the fiftieth anniversary of the Italian premiere of Puccini's "La Bohème" Toscanini undertook a broadcast of the opera on two successive Sunday broadcasts. It was the first performance in this country of an opera under Toscanini's direction in thirty years, and was universally hailed for the revelation that it was.

The year also had its interests in the recital field, most of them contributed by vocalists of long standing. Lotte Lehmann, Frieda Hempel and Povla Frijsh sang repeatedly to sold-out halls; and the unquestioned toast of the season was the English soprano, Maggie Teyte, who had not appeared here since the late thirties, and then with indifferent success. Now a high priestess complete with cult, she had the admirers of her phonograph recordings of French songs as the backlog of an audience that filled Town Hall to the walls half a dozen times during the year. Giuseppe de Luca returned late in the season to show how a voice discreetly used can retain its beauty through fifty years of service, singing both in concert and opera. Heartened by these manifestations, Maria Jeritza also braved a recital (in Carnegie Hall). She looked magnificent.

Marian Anderson celebrated the tenth anniversary of her concert debut in New York (she actually began her career as a competition winner at the Lewisohn Stadium in 1927) and Joseph Szigeti, the twentieth of his. Long past such anniversaries were Kreisler and Heifetz, Horowitz, and Rubinstein, who continued their amazing record of making virtually any appearance a gala occasion.

A notable absence of chamber music programs other than those presented by the New Friends of Music in their subscription series was attributed, by some, to the war and the lack of new ensembles from abroad. Others observed, however, that an appearance for the New Friends accomplished the purpose of obtaining reviews without the gamble involved in a self-sponsored recital.

A few faces which had been missing for some time returned as the season progressed. Albert Spalding resumed his place as dean of American violinists after several years as an officer in Italy; Eugene List played again after several years service (not as an officer) in France and Germany. It was not until the season was virtually at an end that a fresh personality arrived to stimulate conversation. The critic who deemed it appropriate to say of Maryla Jonas, Polish refugee who came to Carnegie Hall by way of South America, that she was "the greatest woman pianist since Teresa Careno" may have bitten off more than Miss Jonas could chew. However, the handful of listeners who were present when she first appeared were replaced by thousands when she played again a few weeks later; and the roster of the season's soloists with the Philharmonic-Symphony Orchestra shows, now, that the name of Jonas led them all.

SUMMER ACTIVITIES

- (1) Esplanade, Boston: Tanglewood, Mass. (capacity 10,000, \$1 to \$5, four series of three concerts each).
- (2) Kleinhans Hall (capacity 2,939, \$.60 to \$1.20, fourteen concerts).
- (3) Ravinia Park (capacity 1,000 reserved seats, \$1.25, many free listeners accommodated, 6 weeks' season).
- (4) Public Auditorium (capacity 7,500, \$.60 to \$1.80, 10 weeks' season).
- (5) Music Hall (capacity 2,000, \$1.20 to \$2.40, 27 events).
- (6) Beauregard Square (capacity 1,850, \$1.25 to \$2.20 concerts).
- (7) Lewisohn Stadium (capacity 22,000, \$.25 to \$2.40, 11 weeks' season).
- (8) Robin Hood Dell (capacity 14,000, \$.25 to \$1.65, 10 weeks' season).
- (9) Watergate (seats for 8,000, additional room for 20,000, \$.50 to \$2.40, 6 weeks' season).

Opera Review

1945-1946

AS IN MOST of the dozen years past, the opera season in the United States was principally an account of the activities of the Metropolitan Opera Association, in New York and on tour. There was the customary spell of performances elsewhere, with Chicago sponsoring a four-weeks' season and San Francisco one of similar duration. For the most part, however, they were performances by Metropolitan artists under local auspices.

Though the Metropolitan season was not as long as some, it marked a resurgence toward the peak. The eighteen weeks marked also a mid-point between the extremes of 24 weeks (1928-29) and 14 weeks (1935-36). During this year's period, 137 performances were presented, including ten in Philadelphia; the eighteen Saturday matinees were heard, as usual, not only by capacity audiences in the theatre, but also by a vast radio audience extending from the Hawaiian Islands to Europe.

Beginning on April 1st, the company followed its customary visits to Baltimore and Boston with a circuit that extended from Chicago to Dallas, with Cleveland, St. Louis, Memphis and Chattanooga as way points. Sold-out attendances were the rule of the run, with more cities petitioning for appearances than could be accommodated.

For the most part, the company was dependent on artists under contract to it from the previous year. However, there were a few worthwhile recruits from other sources. The first of them, Torsten Ralf, made his debut as Lohengrin at the opening performance on November 26, 1945. The Swedish tenor demonstrated the abilities that had made him a standard performer at European opera houses in prewar days, adding able impersonations of such roles as Tannhaeuser, Otello, Parsifal and Walther von Stolzing in "Meistersinger" as the season progressed.

Several of these works profited from the season's other important newcomer—the baritone Joel Berglund. His Hans Sachs, together with his Wotan in "Walkure", established him as the best qualified baritone the Metropolitan has had for these roles since the prime of Friedrich Schorr.

Also of note in the opening "Lohengrin" was the conducting of Fritz Busch, one of the first German musicians to defy the Nazis when he was general director of the Dresden Opera in 1933. In addition to "Lohengrin", he conducted a revival of Donizetti's "Don Pasquale", also "Tannhaeuser" and "Tristan". The opening night, for the first time in history, was broadcast with a full quota of notes, musical and sartorial.

The steady stream of young American singers who have passed through the Metropolitan's stage door in the last decade was swelled this season by two of the most talented of them. Both came with a background in radio which hardly compared with the traditional training of La Scala or the Monnaie in Brussels. However there was no charge of incompetence leveled against either Dorothy Kirsten or Robert Merrill. In addition to Mimi in "Bohème", which was her debut role, Miss Kirsten sang a creditable Violetta in "Traviata" and a performance of Juliet. Merrill's two roles were Escamillo in "Carmen" and the elder Germont in "Traviata", both notable for voluminous tones of real beauty.

There was a full quota of other "first performances" by established members of the company. Two of the more interesting were Risè Steven's first effort as Carmen and Stella Roman's Mimi. Stevens offered a Carmen on the German model and was scolded by some critics for a little more restraint than they thought appropriate. Roman brought no special qualities to her Mimi other than a beautiful voice and a rather wistful manner.

In deference to the new amity in the Far East, the Metropolitan restored Puccini's "Madame Butterfly" to the repertory after a lapse from—of all dates—December 6, 1941. Licia Albanese resumed her stylish Butterfly, with James Melton as Pinkerton for the first time.

As in the seasons immediately preceding, there were as many persons drawn to an opera by the answer to "Who is conducting?" as there was to "Who is singing?" In

addition to Busch and Sodero, the weekly lists offered a sequence of Bruno Walter (doing "Fidelio", "Magic Flute" and "Masked Ball"), George Szell ("Don Giovanni", "Rosenkavalier", "Meistersinger", "Goetterdaemmerung" and "Otello") and Emil Cooper ("Romeo", Parsifal" and "La Gioconda").

The "only yesterdays" of opera were recalled when Lauritz Melchior celebrated his twentieth year as a member of the company on February 26, 1946. Though it was not until the season of 1927 that Ezio Pinza joined the company, the favorite Italian chose to celebrate his twentieth year at the house in the spring of '46. The occasion was the last of five performances of "Don Giovanni", for whose present-day popularity Pinza has been in large part responsible.

Even after the Metropolitan departed on its tour, there was no lack of opera in New York. Fortune Gallo brought his San Carlo Opera Company into the Center Theatre for some twenty performances, distinguished largely for their inexpensiveness. Before his three weeks were concluded, the City Center embarked on its own enterprise, featuring young American artists. However, the largest share of news space was won by two newcomers—the young Negro soprano Camilla Williams, who sang an uncommonly skillful Butterfly in her first New York stage appearance; and a stalwart baritone from Italy, Enzo Mascherini.

At the conclusion of its 61st season of operations, the Metropolitan Opera Association offered the following figures concerning its operations:

Income	
New York	\$1,571,297.94
On tour	679,771.71
Broadcasts	171,494.10
Additional, to total	<u>\$2,627,852.65</u>
Expenses	
Singers and conductors	\$631,545
Orchestra	438,124
Chorus	252,315
Ballot	52,383
	<u>\$1,374,368</u>
Executive and clerical	144,266
Stage department	140,189
Building operation	425,482
RR, transfer and travel	202,544
Additional, to total	<u>\$2,488,735</u>
Operating profit before taxes, interest and depreciation	
	\$139,117
Real estate tax	\$32,125
Interest expense	44,623
Depreciation provision	50,000
	<u>\$126,748</u>
Operating gain, year ending May 31, 1946	
	\$12,368.95

Radio Poll

To encourage the interest of its radio listeners, the Metropolitan invited them to vote, in two categories, for works to be included in the 1946-1947 series of broadcast performances. One was a selection of five operas from the general repertory; the other a selection of five operas from works which have been absent from the repertory for various lengths of time. The results were as follows:

General repertory		Special repertory	
Aida	16,345	Haensel und Gretel	14,645
Carmen	13,257	Boris Goudonoff	12,740
Traviata	11,749	Rosenkavalier	12,598
Tristan	11,312	Otello	11,343
Bohème	10,779	Bartered Bride	11,036

THE SCREEN

by

HOWARD BARNES

movie critic N. Y. *Herald Tribune*

RECONVERSION was no great problem for the screen in 1946. What with expert craftsmen discarding uniforms and a backlog of important films caused by booking jams, there was an ample supply of motion-picture entertainment. The demand was strikingly manifested in booming box-office business. Unfortunately this happy balance of economic pressures rarely found commensurate reflection in terms of artistry. There was more than a little groping along well-channeled production paths. There was a minimum of the exciting experimentation, or the knowing handling of cinematic fundamentals, which inspire memorable achievements.

Being the most popular of contemporary art forms, the screen is inevitably conditioned by the passing scene. Since the contours of this were as erratic as a seismographic recording of a distant earthquake, film-makers plunged hard for what is vaguely known as escapist material. Lavish musicals dotted the year's screen landscape. Out and out comedies and tough melodramas shouldered the song and dance festivals for top honors. Since many of these were made with skill and chromium-plated production finish, they maintained a reasonable average of diversion. Wanting were films to rank with "The Lost Weekend" of the year before in freshness of theme and urgency of treatment.

A notable exception was "The Best Years of Our Lives," which proved a dramatic and moving account of service men returning to civilian life. Robert E. Sherwood's adaptation of MacKinlay Kantor's novel was eloquent, honest and nicely articulated, while William Wyler's consummate direction sustained what was essentially a piece of contemporary reportage. Fredric March, Myrna Loy, Dana Andrews, Teresa Wright and Harold Russell, who actually lost his arms in World War II, gave explicit and brilliantly contrasting portrayals, to reveal both sides of the human reconversion medal. The Samuel Goldwyn production was as audacious as it was artful. In contrast to other motion pictures, it had an immediate and powerful appeal.

"The Razor's Edge," "The Yearling," "Anna and the King of Siam," and "The Green Years" succeeded best in making filmgoers forget immediate postwar problems by the enchantment of eloquent imagery and drama. "A Walk in the Sun" and "Sister Kenny" were more exploratory in their approach to the medium.

Perhaps the complete expression of Hollywood's diffidence in tackling contemporary themes was the screen adaptation of the Marjorie Kinnan Rawlings' Pulitzer Prize winning novel. Its account of a small boy growing up in the bayou country of Florida after the Civil War is tender, beautiful and remote. The eight years that Metro-Goldwyn-Mayer spent in making "The Yearling" have borne rich fruit. While it has several brilliantly contrived animal scenes as the lad's pet deer matches his growth in the critical emergence from childhood, it is essentially a moving and absorbing recreation of human experience. Clarence Brown's direction accents the sentimental aspects of the original, but it has sweep and power. Gregory Peck, Jane Wyman and little Claude Jarman give the star system a jolt with their consummate portrayals of the leading roles. And the Technicolor should stand for some time as a model for superb tinting.

"The Razor's Edge" is an equally fine translation of a book to a motion picture. Twentieth Century-Fox recaptured the turgid drama and Gallic atmosphere of Maugham's novel in a striking manner. Tyrone Power endowed the film with a memorable performance. Clifton Webb, Gene Tierney, Anne Baxter and the others in the cast filled in the background of a modern Pilgrim's Progress splendidly and Edmund Goulding's staging proved a top job.

In "Anna and the King of Siam" there was a daring departure from obvious conven-

tions by the same studio. Margaret Landon's biography of an Englishwoman who found herself instructing the harem of an Oriental despot found full and fascinating realization in John Cromwell's knowing staging of the production and the fully dimensioned portrayals of the lady and the king by Irene Dunne and Rex Harrison. "The Green Years" proved another family portrait of a vanished era as it described an Irish Catholic lad living his formative years in a dour Scotch community. The A. J. Cronin novel was well-served by Charles Coburn's lusty playing and Victor Saville's realistic staging.

Although there was a concerted policy on the part of the studios to forsake war pictures, one of the best of them all was "A Walk in the Sun." Harry Brown's fine story of foot soldiers fighting a small battle in a global war on an Italian beach-head found absorbing film interpretation in the direction of Lewis Milestone, celebrated for another war chronicle, "All Quiet on the Western Front." His concentration on significant detail in what was a minor skirmish made the work an epic of embattled democracy. Dana Andrews and an all-male company collaborated superbly with him in an honest and distinguished film. Similar integrity characterized "Sister Kenny." Although a frankly biased biography of a controversial figure in the treatment of poliomyelitis, it proved an engrossing account of the age-old struggle between reactionary and radical forces in medical science and a glowing portrait of a courageous nurse. Rosalind Russell did wonders in giving the piece humanity and urgency. Dudley Nichols, as producer-writer-director, turned in one of the finest jobs of his career.

The outstanding musicals of the year are best described by their subjects and their stars. A new cycle was in evidence as contemporary music-makers were eulogized in so-called biographies. "The Jolson Story" was an affectionate account of the celebrated mammy singer, distinguished by knowing shots of shifting styles in show business. "Blue Skies" had Fred Astaire and Bing Crosby in their dancing, singing routines with a prodigal accompaniment of Irving Berlin songs. Cole Porter's tunes enlivened "Night and Day," with Cary Grant in the dubious central characterization.

The great Walt Disney illustrated a group of compositions in "Make Mine Music" with animated cartoons, but the film proved extremely uneven. In "Song of the South" he made what he termed a "live action musical drama."

The accent was more on comedy than music in the case of "Road to Utopia," which found Big Crosby and Bob Hope romping through a hilarious entertainment. From an escapist standpoint it proved one of the most satisfying offerings of the year. "Two Sisters From Boston" was a similar amalgam of clowning and singing, the former richly underlined by Jimmy Durante. "Ziegfeld Follies," on the other hand, suggested that the hit or miss revue was not the most felicitous screen form.

The best of the plotted comedies were "The Kid From Brooklyn" and "Cluny Brown." The former spoofed the prize fight racket with regaling results as Danny Kaye contributed another performing tour-de-force. The latter was marked indelibly by the well-known directorial touch of Ernst Lubitsch, and a charming portrayal of a dizzy plumber's daughter by Jennifer Jones. Screen melodramas maintained a higher standard of quality than the comedies. The motion picture extension of Ernest Hemingway's short story, "The Killers," was savagely arresting. "Notorious" found the gifted Alfred Hitchcock using all his melodramatic tricks on a spy story, enhanced for fans by the acting of Ingrid Bergman and Cary Grant in the leading roles. "The Spiral Staircase," "The Dark Mirror," "Undercurrent," "The Chase" and "Duel in the Sun" were other notable motion picture blends of terror and suspense.

Historical subjects were given indifferent projection. "Two Years Before the Mast" had moments of maritime magnificence, but they were rather smothered in variations on the original book. "Kitty" paraded Paulette Goddard in a series of stunning costumes, but its dramatic compulsion was faltering. The brilliant documentaries which distinguished the war years were conspicuous by their absence.

From abroad came a number of choice productions. Laurence Olivier, who gave the theatrical season renewed vitality in the Old Vic repertory, brought Shakespeare miracu-

lously to the screen in the British-made "Henry V." Noel Coward's "Brief Encounter," the semi-documentary, "The Raider" and the adaptation of Shaw's "Caesar and Cleopatra" were other striking English importations. The French cinema contributed "The Well-Digger's Daughter" and "Portrait of a Woman" and Italy sent over a somber story of resistance, "Open City." From the U. S. S. R. came "The Turning Point," a brilliant semi-documentary account of the siege of Stalingrad.

The commercial aspects of the year were gratifying for the screen industry, but there were portents of radical changes in production. The abolishing of block booking caused many studios to abandon class B productions and there were those who foresaw the phenomenon of films failing at the box office. At the same time this concentration of individual offerings promised rich opportunities for individual and courageous achievements. Labor conditions were at a crucial point at the year's close.

Film Box-Office Leaders

Although it must be borne in mind that returns were not in on such year-end releases as "The Best Years of Our Lives," "The Razor's Edge," "The Yearling," "Undercurrent" or "Song of the South," the leading box-office attractions of the year may be tabulated as follows:

"Adventure" (Clark Gable, Greer Garson)
 "Anna and the King of Siam" (Irene Dunne, Rex Harrison)
 "The Bandit of Sherwood Forest" (Cornel Wilde, Anita Louise)
 "The Big Sleep" (Humphrey Bogart, Lauren Bacall)
 "Blue Skies" (Bing Crosby, Fred Astaire)
 "Caesar and Cleopatra" (Vivien Leigh, Claude Rains)
 "Canyon Passage" (Dana Andrews, Brian Donlevy, Susan Hayward)
 "The Dark Mirror" (Olivia de Havilland, Lew Ayres)
 "Easy to Wed" (Van Johnson, Keenan Wynn)
 "Gilda" (Rita Hayworth, Glenn Ford)
 "The Harvey Girls" (Judy Garland, John Hodiak)
 "Henry V" (Laurence Olivier)
 "The Jolson Story" (Larry Parks, Evelyn Keyes)

"The Kid From Brooklyn" (Danny Kaye)
 "The Killers" (Burt Lancaster, Ava Gardner)
 "Night and Day" (Cary Grant, Alexis Smith, Monty Woolley)
 "Notorious" (Cary Grant, Ingrid Bergman)
 "The Outlaw" (Jane Russell)
 "The Postman Always Rings Twice" (Lana Turner, John Garfield)
 "Road to Utopia" (Bing Crosby, Bob Hope)
 "Scarlet Street" (Edward G. Robinson, Joan Bennett)
 "Sentimental Journey" (John Payne, Maureen O'Hara)
 "Smoky" (Fred MacMurray, Anne Baxter)
 "The Spanish Main" (Paul Henreid, Maureen O'Hara)
 "The Spiral Staircase" (Dorothy McGuire, George Brent)
 "A Stolen Life" (Bette Davis, Glenn Ford)
 "The Strange Love of Martha Ivers" (Barbara Stanwyck, Van Heflin)
 "Three Little Girls in Blue" (June Haver, George Montgomery)
 "Two Years Before the Mast" (Alan Ladd, Brian Donlevy)

RADIO

by

JOHN CROSBY

radio critic N. Y. Herald Tribune

DURING THE FOUR war years the broadcasting industry enjoyed a period of unparalleled profits while the nation's radio listeners were plagued by increasing and unchecked commercialism. Despite this, radio gained new prestige and many new listeners who tuned in to hear the news broadcasts and forgot to turn off the radio when they ended, thus gradually acquiring the listening habit.

In 1946 the roof, while it did not fall in, sagged dangerously. In the first place radio came in for the most sustained and violent barrage of criticism in its twenty-six-year history from newspapers, magazines and the Federal Communications Commission. Sec-

only, the bottom fell out of the broadcaster's pocketbook when advertisers slashed their war-swollen accounts to, and sometimes below, prewar levels.

The torrent of criticism was touched off by the Federal Communications Commission which on March 7 issued a carefully documented, 139-page report entitled "The Public Service Responsibility of Broadcast Licensees." In this, the FCC charged there had been a serious deterioration in broadcasts standards in the last five years. The report detailed shocking differentials between the promises made by broadcasters when they received their licenses and their actual performance afterward. It listed one station, KMAC, San Antonio, Texas, which carried 2,215 commercials in 133 hours of broadcasting, an average of 16.7 an hour. The FCC deplored the fact that as many as 55 of the 59 and a half hours of network daytime broadcasting were given over to soap opera and pointed out that, as a consequence of this sudsy caterwauling, 78 percent of the nation's radio sets were turned off in those hours. In conclusion, the commission warned that in the future a radio station's performance would be studied when the time came to renew its license—a clear warning to broadcasters to operate in the public, rather than their own, interest or face revocation of their licenses.

The report, labeled *The Blue Book* after the color of its cover, brought outraged howls from the broadcasters who had become accustomed to thinking of the FCC as a bit of a joke. Justin Miller, president of the National Association of Broadcasters, which represents two-thirds of the nation's radio stations, declared that the FCC was trying to impose governmental control over what the people of the country shall hear. Apart from "The Chicago Tribune" and the Hearst newspapers, Judge Miller had little other public support for this view. "The New York Times," "The New York Herald Tribune," "The St. Louis Post-Dispatch," "Life" magazine, "Variety" and a host of other newspapers supported the view of the commission that radio needed a house cleaning. Many of them voiced the opinion that radio would be wise to do its own house cleaning rather than let the government do it for them.

The editorial in "Life" summed up the opinion of many of the nation's more intelligent listeners: "The American radio currently presents one of history's most amusing, yet disturbing instances of mankind's technology getting ahead of its culture . . . In twenty-five years radio has advanced technically from the cat whisker and crystal to almost full color video. But in the same time it has progressed from Graham McNamee to Gabriel Heatter . . . from Jack Pearl to Milton Berle. We have the new theater, plush seats, gold curtain, but where is the show?"

Criticism mounted not only from without but from within. At an Oklahoma City radio convention, Arch Oboler, one of radio's most progressive writers, charged that radio was "burying itself under a heap of humbug." At the Institute for Education by Radio at Ohio University, Nathan Straus, president of station WMCA in New York, said the broadcasters' reaction to *The Blue Book* was "hysterical denunciation." He urged that the broadcasters cooperate with the FCC in order to wrest from the advertisers their predominant control of radio programing.

Did any of this outburst of condemnation do any good? Cynics both in and out of the industry doubt it. At the end of the year the fifteen programs with the top radio ratings contained seven names—Fred Allen, "Lux Radio Theater," Jack Benny, Bing Crosby, Amos 'n' Andy, Eddie Cantor and Walter Winchell—who had been in the first fifteen ten years earlier. Others on the list such as Charlie McCarthy, Red Skelton, Fibber McGee and Molly, and Bob Hope, were hardly new faces. There were no new ideas.

While Hooper ratings reflect popular taste rather than high critical standards, radio critics and writers agreed with the public in most respects. The winners of the annual "Radio Daily" poll, taken among 1,091 persons who write about radio for a living and presumably think about it more seriously than the average listener, were generally the same persons who enjoyed the highest Hooper ratings.

Bing Crosby, a veteran, and Dinah Shore, not exactly a newcomer, were way out in front among the popular vocalists. The New York Philharmonic and the NBC Symphony

topped the other symphony orchestras. Leading the soap operas—or dramatic serials as they would rather be known—was “One Man’s Family” which is practically as old as the audion tube. “Information, Please,” almost the original quiz show, led all others in quality. Bob Hope was both the nation’s and critics’ favorite comedian and entertainer.

“America’s Town Meeting of the Air,” practically the original forum program, headed the others in that category, and Bill Stern, NBC’s ace sports commentator, led all others in his field. “Lux Radio Theater” won both the popular and critical votes as the best dramatic program, although a fairly new full-hour program “Theater Guild of the Air,” gave it a lot of competition among the critics but not with the public.

A preview of the 1946–47 season by “Radio Daily” was not very encouraging. It listed 120 musical shows, 100 dramatic shows, many of them mysteries; countless strip serials or soap operas; forty quiz shows, most of them moronic, and even more than the usual number of give-away shows on which audience participants will be showered with nylons and iceboxes in exchange for making fools of themselves over a national hookup.

One ray of light shot through the gloom. Charles A. Siepmann, former counsel for the FCC, brought out a book called “Radio’s Second Chance” extolling frequency modulation—or staticless—radio. He pointed out that FM radio would open the way for 3,500 to 5,000 new radio stations. By eliminating the shortage of frequencies, FM would break the monopoly of the four networks and offer labor, educators and other minority groups a voice on the air—now so wholly controlled by laxative, cigarette and soap companies.

However, at the end of the year, FM was still a long way from the public. The eighty-five principal radio manufacturers set a production goal for the year of almost 22 million radios but only about 9 percent would be FM sets or would have FM bands. The FCC approved hundreds of applications for FM stations but construction was slowed by the shortage of building materials and by a natural reluctance to start FM operations when so few persons owned sets.

One other event deserves mention. On June 19, 45,000 persons watched Joe Louis club Billy Conn into unconsciousness at Yankee Stadium while an estimated 100,000 others saw the same knockout on television receivers in New York, Philadelphia and Washington. RCA’s miraculous new image orthicon camera brought the television audience a crystal-clear and far more intimate view of the fight than that of the stadium audience.

BALLET AND DANCE • PHONOGRAPHIC RECORDINGS

by

IRVING KOLODIN

music critic *New York Sun*,

author of *Guide To Recorded Music, The Metropolitan Opera*

The chronicle of ballet in America, where it has been a novelty, a fad and a much publicized “spectacle” since its re-introduction in 1932, entered upon a new cycle in 1946. Whereas it had originally been an appendage of the music managements, the emergence of four traveling groups, with large budgets and long tours, clearly placed it in the category of “show business”. In New York it was physically as well as figuratively a part of Broadway, with simultaneous appearances at the Metropolitan and the Broadway Theatre of two companies in the early fall.

The provocative element in the situation was provided by the Ballet Theatre, which resumed an independent career after four years under the banner of S. Hurok. The trend toward a conventional “lavish” repertory in the Russian manner was rejected in favor of a return to the more intimate productions which had characterized the company’s start. As a symbol of things to come, a principal novelty of the season in the Broadway Theatre was titled “Facsimile”, bringing together again the creators of the popular

"Fancy Free" (Jerome Robbins, choreographer, Leonard Bernstein, composer and Oliver Smith, scenic designer). It was joined by the English Frederick Ashton's "The Skaters" (to music of Meyerbeer) and a version of the now indispensable "Giselle" with decor by Eugene Berman. Among its personnel, Ballet Theatre welcomed back Igor Youskevitch as premiere dancer after a term of naval service, adding him to a roster which included Hugh Laing, Michael Kidd, John Kriza, Nora Kaye, Alicia Alonso and Lucia Chase.

As the nucleus of new activity, Hurok retained the services of the most publicized "team" in ballet, Alicia Markova and Anton Dolin. Such other luminaries of the Ballet Theatre as Andre Eglevsky, Rosella Hightower and George Skibine also chose to continue with the manager who had sponsored the revival of America's interest in ballet. As the basis of a repertory, he had "Giselle", for Markova; a series of standard works in versions by Dolin, and a new treatment of Dumas' "Camille" for Markova, with music of Schubert. He also had the Metropolitan Opera House as a frame for his presentations.

To fill out these valuable but insufficient attractions, he turned to Col. W. de Basil, with whom Hurok had launched ballet at the St. James Theatre in 1932. After five years in South America, Basil brought such established attractions as "Paganini", and "Scheherezade", and the symphonic ballets of Massine, none of them seen in the intervening period. The additional premieres of the season were Lichine's "Cain and Abel", and Psota's "Yara". After the New York season, Markova and Dolin resumed touring with the small unit of their own, joining with the main group for engagements in the larger road cities.

The other major company, which owns the rights to the phrase "Ballet Russe de Monte Carlo", suffered a blow to its New York season in the City Center of Music and Drama through an injury to Alexandra Danilova. Her scheduled appearance in the company's important novelty, "The Bells", was somewhat balanced by the willingness of Ruth Page, creator of the ballet, to dance the part she had invented.

A feature of the company's schedule continued to be works of George Balanchine—"Ballet Imperial", "Baiser de la Fee", "Mozartiana", "Night Shadow" and the newly revived "Serenade"—plus the exclusive rights to three of the most popular works to merge in recent ballet history: "Rodeo", "Beau Danube", and "Gaité Parisienne".

In the realm of what is known as "dance" rather than "ballet", 1946 was also a boom year. A spring season in New York by Martha Graham and her company, twice-prolonged, was the index to a popularity for this innovator greater than ever before. Such new works as "Appalachian Spring", with the much-admired score of Aaron Copland, as well as the Emily Dickinson-inspired "Letter to the World", and the ritualistic "El Penitente" gave a new variety to Graham's work.

While these groups were attracting most of the anticipation of dance lovers throughout the country, there were nearly a dozen others scheduled for New York engagements and nation-wide tours during the winter months. The most celebrated were the Jooss Ballet, with its famous "Green Table" and such favorite dancers as Noelle de Mosa, Rolf Alexander, Ula Soederbaum and Hans Zullig; and the Trudi Schoop ballet of "Fridolin" fame.

More than a few dancers of solid repute were concealed under such titles as "Ballet for America", "Fox Hole Ballet" and "Dance Trio", in which they found greater opportunities than existed in the larger, more routinized groups. Katharine Dunham interrupted a road tour to bring her "Bal Negre" company into New York for a month in the fall, when an unexpected theatre vacancy opened up.

Phonograph Recordings

IF THE multiplicity of labels and records to be seen in any music shop during 1946 suggested that this market was booming at a dizzy rate, there were ample supporting facts to be cited. More than 200 different brand names were attached to records issued in this year, mostly by independent companies which had few facilities other than "talent" and a sales force.

The allocation of materials and production facilities between popular and classical has not given the follower of the latter all they have wanted during the war years, and

expected to have again by this time. José Iturbi's earnings of \$118,000 from a single folio of Chopin music (a reproduction of his performances in "A Song to Remember") indicated that a boom exists in this field too, when merchandise is available. Neither Columbia nor Victor is in any respect abreast of the back orders for catalogue material with many famous albums out of stock for two and three years.

The Year's Notable Recordings CLASSICAL ALBUMS—ORCHESTRAL

Bach: Brandenburg Concertos No. 3 and 4. Brilliant performances by Serge Koussevitzky and the Boston Symphony, made in the Theatre-Concert Hall at Tanglewood. Superbly reproduced. (RCA-Victor)

Bizet: Symphony No. 1. A youthful masterpiece by the composer of *Carmen*, full of charm and freshness. Artur Rodzinski conducting the Philharmonic-Symphony Orchestra. (Columbia)

Copland: Appalachian Spring. A fine addition to the growing catalogue of American music on records. Written for Martha Graham and her Dance Group, *Appalachian Spring* has already passed its fiftieth performance by native orchestras. Serge Koussevitzky, who sponsored its concert hall debut, conducts the Boston Symphony in a performance of remarkable clarity and spirit. (RCA-Victor)

Haydn: Symphony No. 97 in C. Symphony No. 99 in B flat. Sir Thomas Beecham is responsible for the first of these, Toscanini for the second. Varied as the viewpoints of the two men are, the results are flattering to the composer, and gratifying to the listener. (Both RCA-Victor)

Mahler: Symphony No. 4. A sturdy, comprehending performance by Bruno Walter—friend and disciple of the composer—played with distinction by the Philharmonic-Symphony Orchestra. (Columbia)

Milhaud: Protée. The gendarmes were called to quell the rioting when Paris first heard this incidental music to Paul Claudel's play, but that was twenty-odd years ago. Pierre Monteux does a lively job of it with the San Francisco Symphony, and the sound from the grooves is stunning. (RCA-Victor)

Rachmaninoff: Concerto No. 2. Die-hards still prefer the composer's own playing of this music on records, but the progress in recording since it was made gives infinite advantages to Artur Rubinstein, the soloist in this version. A fluent and powerful performance by him is not too well supported by the playing of the NBC Orchestra under Vladimir Golschmann. (RCA-Victor)

Tchaikovsky: Swan Lake. A pleasurable collection of excerpts from the favorite ballet—including some not generally heard in the abridged versions recently popular—performed with verve and taste by Vladimir Golschmann and the St. Louis Symphony Orchestra. Brilliantly recorded. (RCA-Victor)

CLASSICAL ALBUMS—VOCAL

Mahler: Songs of a Wayfarer. First American recording of these expressive songs, with Carol Brice, contralto, and Fritz Reiner conducting Pittsburgh Symphony. (Columbia)

Schubert: Die Schöne Müllerin. Lotte Lehmann sings this cycle of songs (complete save for *Ungeduld*, which she has recorded previously) with fine art, and the emotion appropriate to them. (Columbia)

CLASSICAL ALBUMS—INSTRUMENTAL

Bach: Goldberg Variations. The year's most distinguished accomplishment by an American record firm, permitting a wider distribution of Wanda Landowska's matchless harpsichord performance than was possible with the subscription-sold version she made in prewar Europe. Recorded with care and notable success. (Victor)

Beethoven: Sonata in C minor, opus 30, No. 3. Isaac Stern and Alexander Zakin are not the most famous names that might be associated with a playing of this violin and piano sonata, but their qualities would be hard to surpass. The reproduction is outstandingly good. (Columbia)

CLASSICAL SINGLE RECORDS

Herold: Zampa Overture. A re-do of the entertaining old stand-by, notable for the energy and dash provided by Efrem Kurtz in his direction of the Philharmonic-Symphony Orchestra. Good full-range recording. (Columbia)

Mozart: Seraglio Overture. Beecham's Mozart is a legend, and this is the year's one new example of it. The London Philharmonic plays splendidly. (Victor)

Prokofiev: Overture on Yiddish Themes. An oddity concocted by Prokofiev during a visit to America in the 20s', it is played with humor by an ensemble of the small size for which it was intended. Well recorded. (DISC)

Verdi: Dite alla giovine (Traviata). The robust voice of the youthful Robert Merrill and the compelling one of Licia Albanese are perfectly blended in this exceptional operatic recording. (RCA-Victor)

Weber: Der Freischutz Overture. A whole philosophy of orchestral execution and musical virtuosity could be distilled from this single disk by Toscanini and the NBC Orchestra. Few recordings surpass it in realism and power. (RCA-Victor)

POPULAR ALBUMS

Grofé: Grand Canyon Suite. A triumph of adaptation by Arturo Toscanini, leading the NBC Orchestra in a light work rarely played with such virtuoso precision. The recording is splendid. (Victor)

Kern: Collection of Songs. Risë Stevens on a prima donna's holiday, singing this material with much more than customary taste. Alan Schulman's arrangements are likewise superior. (Columbia)

Porter: Collection of Songs. The latest of Artie Shaw's orchestra is one with strings, and they add much to the pleasures of these performances. *Love for Sale, Get Out of Town, Night and Day, You Do Something to Me* are some of the tunes played with grand verve and style. (Musicraft)

SHOW MUSIC

Berlin: Annie Get Your Gun. A generous review of the hit show, with Ethel Merman, Ray Middleton and the rest of the original cast. Not as good to hear as to see, but inimitable nevertheless. (Decca)

Rome: Call Me Mister. All the boys and girls from Jules Munshin to Betty Garrett, in high humor and good form. A very thorough job. (Decca)

Rodgers: Carousel Waltzes. Better sounding on a symphony orchestra than it was in the theater pit, due no little to the skillful hand of Fritz Reiner. (Columbia)

Sing Out Sweet Land. Alfred Drake and Burl Ives in a delightful compendium of Americana, plus such other helpers as Alma Kaye, Bibi Osterwald and Juanita Hall. The generous set of six records is decidedly worth owning. (Decca)

POPULAR AND DANCE

Ellington: Black, Brown and Beige. Two twelve-inch disks from the lengthiest of Duke's scores, including the famous *The Blues*. (RCA-Victor)

Herman: Wildroot. 1946 big-band jazz at its most typical. Not for the fainthearted. (Columbia)

King Cole Trio: Highway 66. 1946 little-group jazz at its most typical. Mischievous piano by Nat Cole, also insinuating voice by the same. (Capitol)

Leonard: They Say It's Wonderful. The best vocal version of this ballad from Annie, credited to Jack Leonard, ex-Dorsey vocalist. (Majestic)

Lee: Aren't You Kinda Glad. Well-phrased delivery of the best in the group of "new" Gershwin tunes, sung with proper meaning by Peggy Lee. (Capitol)

CHILDREN'S RECORDS

Tubby the Tuba. An entertaining creation by Paul Tripp and George Kleinsinger, in which musical instruments are humanized, for educational purposes, in a story pattern. Victor Jory makes a friendly-voiced narrator. (Cosmo)

THE YEAR IN ART

by

THOMAS CRAVEN

art critic, author of *Men in Art*, *Modern Treasury of Art Masterpieces*,
Story of Painting, *Cartoon Cavalcade*

IN THE FIELD of art, in 1946, two developments, or tendencies, predominated: first, the ascendancy of abstract, or non-objective painting in America; second, the cordial working relations established between art and industry. The first tendency pointed the way to confusion and disaster, and if sufficiently prolonged, may well result in the alienation of the growing popular support of art and in the possible collapse of a school of painters dealing realistically with life in the United States.

Abstract art. The rise of abstract art, commonly described as a shift to the Left, is without political significance although the founder of non-objective painting, Pablo Picasso, openly and boastfully espoused the communist cause. In the United States, as in other nations, the retreat from realism, or representation, may be largely attributed to postwar disillusionment. Indoctrinated against nationalism in all its forms, their hopes shattered by resounding talk of another world war, bereft of any unifying faith or compelling direction, artists everywhere began to flee from realities into a world of abstractions and to express themselves in a symbolical language. This language, it should be noted, is the technical derivative of Cubism and other sects born during and after World War I, an art idiom which has infiltrated into galleries and educational institutions throughout America. It has now become the prevailing language of hundreds of bewildered youngsters conscious of the woes of humanity.

In 1946, not only in the international exhibition rooms of New York but also in the Middle West, the Northwest, and California, the major emphasis was on abstract painting, or that form of art in which the natural physiognomy of a person or thing, and its organic shape and proportions, are abolished or converted into geometrical equivalents. It was a fine year for competitions and in most of the contests the top awards went to the non-realistic artists. To promote its fantastic wares, the heavily endowed Museum of Non-Objective Painting, of New York, displayed graphs and scale models of a proposed building, a new home, designed by the one and only Frank Lloyd Wright for a site on upper Fifth Avenue, a modernist structure resembling the latest style of electric washing machine with a transparent plastic blister for a dome, or top. In the High School of Music and Art, of New York, and in high schools of forty-eight States; in socially prominent academies, like Andover, talented youths were taught to delineate, not human features, but combinations of cubes and cones. At the University of Iowa, where the late Grant Wood set the example by his beautifully designed paintings of the central valleys and their inhabitants, cornfed students were counseled to imitate the distortions and triangulations of displaced abstractionists; and in Hollywood, motion picture producers began to traffic in surrealism.

Surrealism. Popularly introduced to America some years ago by the eccentric Spanish painter and window dresser, Salvador Dali, surrealism gained enormous momentum during 1946. Dali, technically gifted and a superior showman, designed dream sets for certain preposterous movies and exerted marked influence on women's styles, and on the illustrations, format, and textual matter of the smart set magazines. The main influence of surrealism, however, was on young and groping artists on one hand, and on the homeless, war-torn veterans on the other, artists who expressed their private agonies, frustrations, and nightmares—and all the floating debris of their sad, subconscious minds—by warping real things into strange symbols and semi-abstract decompositions.

Advertising art. The second tendency, the alliance between art and industry, was productive of extraordinary results, good and bad. For the first time on an extensive scale, artists of all persuasions lent their talents to the exploitation of merchandise and it was a common sight to see in the pages of popular magazines and in house organs, commercial paintings executed expressly for manufacturers of cigarettes, whisky, radio sets, airplanes, petroleum products, and pharmaceutical supplies. The artists engaged in such enterprises, for the most part, were nationally known exponents of vigorous realism, men like Thomas Benton, James Chapin, Adolf Dehn, Peter Hurd, Aaron Bohrod, and Paul Sample. The abstract, or left-wing painters, were employed as fantastic illustrators for fashion magazines and as designers of modernist interiors and decorations.

The reasons for the influx of artists into the field of advertising were purely economic. According to a survey made in 1946 by the Magazine of Art, the average annual income, per capita, of America's most reputable artists, from the sales of their paintings, was slightly more than \$1000, and rather than starve, the artists resorted to commercial jobs. That their trade ventures raised the level of advertising art is an open question, but the cheapening effect of trade practices on the work of the most estimable painters is a matter of common recognition. The most salutary effects of the union of art and industry were exemplified in the attitude of big corporations—the Pepsi-Cola Company, Abbott Laboratories, Encyclopaedia Britannica, and International Business Machines, to name the most prominent, which bought liberally of all kinds of American art, used their purchases occasionally for advertising purposes, and circulated their growing collections from coast to coast.

Competitions. The largest competition of the year, the third annual exhibition of the Pepsi-Cola Corporation, with \$15,000 in prize money, attracted painters of all denominations, the majority being left of center and the severely academic almost non-existent. First prize, \$2500, awarded to Boris Deutsch for a ghastly conception of atomic fury in the manner of Picasso's *Guernica*. Second prize, \$2000, to Lucio Lopez-Rey for a medieval bogey picture; third prize, \$1500, to Robert Gwathmey for a semi-abstract black *Madonna and Child*; fourth award, \$1000, to Abraham Rattner for a ghoulish piece of surrealism.

David Loew and Albert Lewin, self-conscious Hollywood aesthetes and producers, commissioned a dozen specialists in disintegration, among them Salvador Dali, Max Ernst, Ivan Lorraine Albright, Stanley Spencer, and Abraham Rattner, to paint the *Temptation of St. Anthony* for a setting to be used in a motion picture of Maupassant's *Bel Ami*. The prize award, \$3000, was captured by Ernst, European surrealist and expert in the realm of demented imagery.

The Carnegie Institute's annual affair, usually international in scope, was limited to 300 invited Americans, most of them competent, tepid and unoriginal. First prize, \$1000, to Karl Knaths for a conventional specimen of flat Cubism; second prize, \$700, to Jack Levine, a young artist of great promise; third prize, \$500, to William Gropper for a grotesque conception of Don Quixote.

Principal exhibitions. Knoedler & Company, famed international art dealers, celebrated their one hundredth anniversary with an historical showing in New York.

The Whitney Museum of New York, noted for its devotion to American art, offered, under the title, "Pioneers of Modern Art," canvases by Joseph Stella, Thomas Benton, Stuart Davis, Preston Dickinson, Max Weber and John Marin.

In London, early in the year, the first showing by Picasso since the war was greeted with sneers and snubs. The same paintings, shown later in New York, with other works by the School of Paris, were acclaimed as the cream and flower of modern art.

In London, a comprehensive exhibition of American paintings from Thomas Eakins to Thomas Benton was critically excoriated because it was too typically American, or in its modern aspects, too close to the French. In the United States, two exhibitions of British art, one of old portrait and landscape masters, the other of modernists, were extravagantly praised.

NEWS RECORD of 1946

Compiled by

THE NEW YORK HERALD TRIBUNE

JANUARY

IT WAS THE first New Year's Eve for six years on which men were not shooting at each other formally. So people wedged themselves tighter than ever into night spots. But the peace wasn't quite all we had hoped for. The world still had things to worry about—Russia—the peace treaty wrangles—that ghastly atom—the seeming feebleness of the a-borning United Nations. Strikes hobbled the United States—automobile, steel, electrical appliances, meat packing. We had expected to get those gadgets we love—washing machines, horseless carriages, mixing machines which pre-chew food. Also homes. But no. Not even men's white shirts or suits, for the moment.

- 1 William O'Dwyer, who came to America from Ireland in 1910 with \$23.85 in his pocket, inaugurated Mayor of New York City, succeeding Fiorello H. LaGuardia, who becomes radio commenorator.
- 1 Emperor Hirohito shocks Japan by saying he is not divine.
- 3 Truman blames Congress for blocking his program.
- 3 William Joyce ("Lord Haw-Haw" on German radio) is hanged in London as traitor.
- 5 Allies make public Hitler death documents; he expelled Goering and Himmler; married Eva Braun, 35.
- 7 American occupation troops hold mass demonstrations saying they "wanna go home"; demonstrations spread to India, Korea, Japan, Philippines, France, Germany.
- 10 U. S. Army hits the moon with radar impulses and catches them on the bounce.
- 10 General Assembly of the United Nations meets first time, in London; elects Paul Henri-Spaak, of Belgium, president.
- 10 Truce signed in China between Chiang Kai-shek's central government forces and Chinese Communists; General George C. Marshall is the mediator.

- 11 Long-distance phone service cut to dribble by strike in 26 states.
 - 14-16 Three-day general strike in Argentina in protest against dictatorship of Colonel Juan D. Péron.
 - 15 200,000 C. I. O. electrical workers go on strike, cutting off production of appliances.
 - 17 United Nations Security Council meets for first time, in London.
 - 18 Truman nominates Edwin W. Pauley, oil man and former Democratic party treasurer, as Undersecretary of the Navy.
 - 19 Iran (Persia) asks United Nations Security Council to help oust Soviet occupation troops.
 - 20 800,000 steel workers strike.
 - 20 General Charles de Gaulle resigns as President of France.
 - 21 Truman, in message on the state of the nation, asks Congress to act on twenty-six measures; is concerned about preventing inflation and subsequent depression.
 - 24 U. N. General Assembly creates Atomic Energy Commission.
 - 25 John L. Lewis and his United Mine Workers rejoin American Federation of Labor, which they had bolted in 1936.
 - 26 Government takes over meat-packing industry as 250,000 go on strike; unions tell men to work for government.
- DIED:** Harry Hopkins, 55; William T. Dewart, 36.

FEBRUARY

IN PITTSBURGH the heavens glowed again; the steel strike was over and America's factories greedily gobbled the ingots. General Motors, however, was still closed by its long strike. In Washington, political fireworks lit the heavens. Secretary of the Interior Ickes spoke out against Edwin W. Pauley, Truman's nominee for Undersecretary of the Navy. Ickes became a newspaper columnist instead of a Cabinet minister. People briskly bought Betty Mac-

Donald's "The Egg and I," a book destined to sell a million copies—which would, if laid side by side, reach from New York to Philadelphia, and be a lot more profitable than laying eggs. The Gallup Poll found President Truman popular with 63 percent of the people. (Remember this statistic in October.)

- 2 Ickes blasts Pauley as unfit to be Navy Undersecretary.
- 3 United Nations committee recommends permanent headquarters in New York-Connecticut border area. Residents of Greenwich protest.
- 6 Security Council rejects Russia's plea to investigate presence of British troops in Greece.
- 6 Truman urges U. S. to save food in order to prevent famine abroad.
- 7 House brushes aside Truman's plan for labor fact-finding boards and instead passes more drastic Case bill.
- 7 Soviet Ukraine charges before Security Council that British troops in Java menace peace; asks investigation.
- 7 Truman says he won't withdraw Pauley nomination.
- 9 Southern Democrats in Senate win three-week filibuster to block creation of Fair Employment Practices Commission.
- 0 Stalin announces new five-year plan for Russia.
- 2 Mayor shuts down New York for lack of fuel due to tugboat strike. Navy brings in coal.
- 2 State Department accuses Péron regime in Argentina of helping Nazis plot conquest in South America.
- 3 Security Council refuses to investigate British troops in Java.
- 3 Ickes, Secretary of the Interior for thirteen years, resigns in anger over Pauley affair.
- 4 United Nations chooses New York City as temporary headquarters.
- 5 Steel strike ends; men get increase President recommended—18½ cents an hour, setting pattern for wage rises.
- 8 Four American Archbishops become Cardinals.
- 8 James M. Curley, Mayor of Boston, sentenced to six months and \$1,000 fine in mail fraud.
- 0 Vassar gets woman president, first time in 85 years; Sarah Gibson Blanding.
- 1 Anti-Petrillo bill passed by House.
- 1 Anti-British rioting in Egypt, worst in decade.
- 4 Argentina elects Péron President.

28 France closes border with Spain in protest against totalitarian regime of Franco.

DIED: E. Phillips Oppenheim, 79; George Arliss, 77; Dr. Charles M. Sheldon, 89 (author of "In His Steps," which outsold every book but the Bible).

MARCH

DAPPER, DARK, DEAD-PAN, 38-year-old Andrei A. Gromyko stalked out of the United Nations Security Council meeting in New York. Was Russia pulling out of the United Nations? No, just a diplomatic war of nerves. Meanwhile, the United States was moving King Judah and tribe from their beloved Bikini Atoll. And Winston Churchill coined a phrase in a Missouri speech—"the iron curtain." Stalin said Churchill was a "firebrand of war." Here at home, domestic wars—Gloria Vanderbilt Stokowski served an ultimatum on her mamma; said she'd cut off mamma's \$21,000 yearly allowance; mamma could get a job. The four-month-old General Motors strike ended. Then coal miners walked out.

- 1 Bank of England goes under government ownership after 252 years of private operation.
- 4 England, France and U. S. publish documents showing Franco's collaboration with Axis, and call on the Spanish people to overthrow him.
- 6 Japan drafts new constitution abolishing army, navy, air forces forever, making war unconstitutional.
- 7 Sixty-five-day Western Electric strike settled.
- 9 Infra-red eye developed; shines ten miles.
- 10 Italians hold first free election since 1922.
- 12 Herbert H. Lehman resigns after three years as director of United Nations Relief and Rehabilitation Administration.
- 13 Four-month-old General Motors strike is settled; men get 18½ cents an hour more.
- 13 Soviet troops evacuate Mukden, on way out of Manchuria, stripping factories of machinery as they go.
- 13 Truman withdraws Pauley nomination after futile seven-week fight for Senate confirmation.
- 15 Attlee offers India full independence inside the Empire or outside.
- 25 Security Council begins second session, in New York City; Iran again appeals to get Russian troops out.

- 26 Government forbids construction of most types of business buildings so materials can go into homes for veterans.
 - 27 Soviet delegate, Gromyko, begins 13-day boycott of Security Council in protest against keeping Iran's complaint about Russia on the agenda.
 - 31 Greece holds first postwar election; Rightists win; leftists charge terrorism.
 - 31 John L. Lewis's 400,000 bituminous miners quit work, demanding higher pay and a union welfare fund contributed by employers.
- DIED:** Largo Caballero, 76; George Z. Medalie, 62; Philip Merivale, 59.

APRIL

SO WE HAD smashed Nazism and Fascism? Well, admirers of Benito Mussolini stole the dead, disintegrating Duce from the unmarked potter's grave in Milan which he had occupied just one year. And Russia, Poland and France, asked the United Nations to heave overboard Generalissimo Franco, the Axis-loving tyrant of Spain. The United States gave up trying to oust the Nazi-aping dictator of Argentina, President Perón, and sent him an ambassador. Democratic France decreed the death of legalized prostitution. Here at home we read "This Side of Innocence," a book about "tempestuous mating," which was destined to sell 1,267,000 copies, which if stacked up would make a pile more than sixteen miles high. The miners were still out fishing, so factories and stores had to close.

- 1 Republicans elect new national chairman: Brazilla Carroll Reece, Tennessee lawyer and former Congressman.
- 2 Government reports nation's civilian production at highest level ever reached —\$150,000,000,000 a year.
- 3 Firing squad executes Lt. Gen. Masaharu Homma, who ordered Bataan Death March.
- 4 Russia promises Iran to withdraw troops by May 6.
- 5 Iran agrees to give Russia oil rights; consents to semi-autonomy for northern province of Azerbaijan.
- 10 Poland asks Security Council to act against Franco regime in Spain, calling it threat to peace.
- 10 Japan holds first free parliamentary election since 1932; "Liberal" party (actually conservative) wins.

- 18 U. S. recognizes regime of Marshal Tito in Yugoslavia.
 - 18 League of Nations meets for last time in Geneva, to put itself out of existence.
 - 19 U. S. orders 25 percent reduction in American consumption of flour, to export more to starving Europe.
 - 20 Rival factions in China are fighting, despite truce; Chinese Communists capture Changchun from Chiang Kai-shek's troops.
 - 23 Security Council refuses, 8 to 3, to drop Iran case from agenda, as demanded by Russia.
 - 23 Manuel A. Roxas is elected President of the Philippines, defeating President Sergio Osmeña.
 - 25 Council of Foreign Ministers (Byrnes, Bevin, Molotov and Bidault) meets in Paris to draw up peace treaties for Italy, Rumania, Hungary, Bulgaria and Finland.
 - 29 U. S. proposes treaty with England, Russia and France to keep Germany disarmed twenty-five years, by force if necessary; Russia is cool.
 - 30 Anglo-American Committee of Inquiry recommends letting 100,000 Jewish refugees from Europe into Palestine promptly.
- DIED:** Lord Keynes, 62; Chief Justice Harlan Fiske Stone, 73; Vincent Youmans, 47; Noah Beery Sr., 63.

MAY

EUROPE lost another king (scarcely a good poker hand left) when little Victor Emmanuel bustled off to Egypt. America lost nearly half its flow of drinking alcohol, which bustled off in the form of grain to hungry Europe. We missed our trains in a big way when the railroad unions struck. What to do about these labor disputes? The President had one idea, Congress another, result: zero. In Detroit the painters' union picketed a man for painting his own home. A liberal play, "State of the Union," won the Pulitzer prize. And in the South the Ku Klux Klan began to bloom again. Stocks reached their peak for the four-year-old wartime bull market, then started gently sliding down. (See September and weep.)

- 1 Security Council opens investigation of Franco regime in Spain.
- 5 France votes to reject proposed postwar constitution, although it was favored by Communists, numerically largest party.

- 6 Russia fails to report to Security Council whether she withdrew troops from Iran, as promised. Iran says it can't get into Azerbaijan province to find out.
- 6 Council of Foreign Ministers deadlocked over Trieste. Russia backs Yugoslavia in demanding it. Western Allies back Italy in demanding it.
- 6 Russia drops claim to trusteeship over Italian Tripolitania in North Africa.
- 7 Britain promises to withdraw troops from Egypt; negotiations are under way for a new treaty.
- 9 King Victor Emmanuel III abdicates, hoping Italy's monarchy can be saved by his son, Humbert, who takes throne.
- 3 Congress passes 2,700,000-unit veterans' housing bill.
- 5 Council of Foreign Ministers in Paris fails to reach agreement on peace treaties and recesses.
- 5 Truman seizes railroads in face of strike threat.
- 6 British offer home-rule plan for India—a Hindu-Moslem federal union, with some autonomy for Moslems, but not independent status (Pakistan) which they demanded.
- 6 Shigeru Yoshida named Japanese Premier; Tokyo newspapers say he represents old prewar ruling clique.
- 0 Army plane crashes into Bank of Manhattan Building in New York, killing five aboard.
- 3 All U. S. railroads stop as unions go on strike.
- 4 Truman orders Army to run railroads if trains aren't moving tomorrow evening.
- 5 Truman calls special session of Congress; asks power to draft workers to run a government-seized industry. House immediately passes it, but not Senate (which rejected it on May 29).
- 5 Rail unions surrender; accept Truman terms—18½-cent hourly increase, which they dislike. Trains run.
- 6 Communists win overwhelmingly in Czechoslovakia election.
- 8-29 Twenty-eight Nazis, convicted of killing 300,000 persons in the Dachau concentration camp, walk up thirteen steps to the gallows at Landsberg, and are hanged by an American sergeant.
- 9 Congress passes Case bill, first piece of restrictive labor legislation in thirteen years; sixty-day cooling-off period required before strikes.
- 9 Coal strike over, after one-sixth of year's output lost. Miners get modified welfare fund; government operates mines because owners won't sign contract.

DIED: Booth Tarkington, 76; Joseph Medill Patterson, 67.

JUNE

CONGRESS and the President knocked out price control and Joe Louis knocked out Billy Conn. Soviet Russia shocked the Security Council by recklessly wielding her veto power three times in one afternoon. In Chicago the Army recovered a million and a half dollars' worth of jewels stolen by a colonel and his WAC wife (the Jack Durants) from the once-royal House of Hesse in Germany. In Chicago flames surged through the La Salle Hotel on the night of June 5th and burned up fifty-eight persons. In Chicago William Heirens, high school boy, confessed (A) having killed Frances Brown last December and written on her mirror: "For heaven's sake, catch me before I kill more." (B) Having killed six-year-old Suzanne Degnan and tossed her severed head in a sewer. And (C) having killed Mrs. Josephine Ross in her bedroom.

- 2 Italy votes to abolish monarchy. Christian Democrats (Catholic center party) win; Socialists second; Communists third.
- 2 French election demotes Communists to second place; puts Popular Republican Movement (Catholic center party) on top.
- 3 Twenty-seven Japanese war leaders go on trial in Tokyo, parallel Nuremberg trials.
- 6 John Wesley Snyder, old St. Louis banker friend of Truman's, is named Secretary of the Treasury.
- 6 Fred M. Vinson, whose father was a jailer in Kentucky, is appointed Chief Justice of the United States.
- 6 General Marshall arranges another truce, effective June 7, between Chiang Kai-shek's central government and the Chinese Communists.
- 10 Yugoslavs put on trial General Draja Mihailovitch, an Allied hero early in the war, for traitorous collaboration with Germans. American group protests, saying he is being persecuted for anti-Communism.
- 10 Justice Robert H. Jackson, in Nuremberg, issues unprecedented blast against his Supreme Court colleague, Justice Hugo L. Black, saying he sat in a case from which he might well have disqualified himself.

- 11 Truman vetoes Case Bill restricting strikes, saying it attacks symptoms rather than causes.
- 12 Bevin says England cannot put 100,000 Jews into Palestine right away, because Arabs would fight.
- 13 Congress passes price control bill, extending O. P. A., but full of loophole amendments.
- 14 United Nations Atomic Energy Commission meets first time; U. S. advocates international controls and abolition of Big Five veto power if some nation starts to develop atom for war use.
- 15 Council of Foreign Ministers meets again in Paris in fourth effort to agree on peace treaties.
- 19 Russia offers an atom control plan differing greatly from U. S. proposal.
- 19 Georges Bidault, former history teacher who headed resistance movement, elected provisional president of France.
- 20 Council of Foreign Ministers agrees to postpone for a year what to do with Italian colonies.
- 25 Congress passes nine-month draft extension to March 31, 1947.
- 26 Russia exercises veto three times in Security Council in regard to Spanish question, which is kept on the agenda.
- 28 Chester Bowles resigns as O. P. A. administrator, in protest against Congress bill which would "legalize inflation."
- 29 Truman vetoes price control bill, letting O. P. A. expire; but he hopes Congress will extend the present law. Congress does not; O. P. A. expires.
- 29 British arrest 2,718 Jews in Palestine, trying to round up terrorists.

DIED: William S. Hart, 81; Jack Johnson, 68; Mikhail I. Kalinin, 70; Senator John H. Bankhead, 73; Major Edward Bowes, 72.

JULY

IN FAR-AWAY Poland a mob slaughtered thirty-six Jews at Kielce, in the worst postwar pogrom. In the United States a mob of Southerners shot to death four Negro men and women (one a war veteran) at Monroe, Ga. Next door in Mississippi the voters renominated for the Senate Theodore G. Bilbo, who had urged red-blooded Mississippians to go to any lengths to keep Negroes from voting. In New York City, John S. Sumner, Executive Secretary of the Society for the Suppression of Vice, pantingly read "Memoirs of Hecate County," a new book by Edmund Wilson, and persuaded cops to raid bookshops.

In Paris the Big Four Council of Foreign Ministers failed to agree on peace treaties and recessed. In Pittsburgh, a note of cheer: Miss Norah Carpenter, of England, got married to the G.I. who had given her a surprise packet of quadruplets, three surviving.

- 1 Army B-29 bomber, Dave's Dream, drops atom bomb in first test at Bikini Atoll. Eleven outmoded ships are destroyed and twenty-five crippled. The animal toll is 15.3 percent.
- 2 Now that price controls are off, cows, pigs and sheep rush to market. Cattle prices set a record—\$22.50 a hundred-weight in Chicago.
- 3 Council of Foreign Ministers agrees to internationalize Trieste, making it a ward of the United Nations.
- 4 U. S. grants Philippines independence.
- 5-31 Thousands of Jews flee in terror from Poland into European countries, hoping to get to Palestine, after July 4 pogrom at Kielce.
- 7 Howard Hughes badly injured when his photographic plane crashes in test flight in California.
- 10 Molotov reveals Russia's plan for Germany—no federalization; strong central government; \$10 billion reparations to Russia.
- 10 Government estimates cost of basic commodities has risen 16 percent in two weeks; purchaser's dollar has shrunk to 84 cents.
- 12 Government orders all Lockheed Constellation planes to stay on ground; two of them caught fire in the air recently.
- 12 Council of Foreign Ministers recesses, still without agreement.
- 13 Congress approves \$3,750,000,000 loan to England; British plan to buy American machinery, food, movies.
- 15 Yugoslavia condemns General Mihailo vitch to be shot. He is executed two days later.
- 16 Isolationist Senator Burton K. Wheeler beaten for Democratic renomination in Montana after twenty-four years in Senate.
- 17 Eugene Talmadge, who based his campaign on white-supremacy issue, wins Democratic nomination for governor of Georgia, by unit vote but not by plurality.
- 19 Senate War Investigating Committee subpoenas Andrew J. May, chairman of House Military Affairs Committee, to explain why he did so many favors for Garsson munitions combine, and how he happened to cash checks from them. He promises to testify Friday. (Suffers heart attack; does not testify.)

- 10 Congressional Pearl Harbor investigating committee blames Admiral Kimmel and General Short (Pearl Harbor commanders) for negligence in Japan's sneak attack; also blames Washington top officers.
- 12 Jewish terrorists bomb King David Hotel in Jerusalem (British government headquarters), killing 71.
- 12 Last German prisoners of war leave Camp Shanks, New York.
- 5 Second atom bomb is tested at Bikini, exploded under water; battleship, aircraft carrier and eight other craft sent to the bottom.
- 5 O. P. A. is revived after lapse of twenty-five days as Congress passes new bill, which Truman signs "with reluctance" because of loopholes.
- 6 Congress passes bill putting U. S. atom control in hands of civilian board of five, instead of Army.
- 9 Twenty-one nations assemble in Paris to discuss peace treaties with Italy, Bulgaria, Rumania, Hungary and Finland. Treaties had been prepared by Big Four Council of Foreign Ministers, with some points still in dispute.
- 9 England accepts American proposal to merge our occupation zones in Germany economically; Russia and France decline merger.

DIED: Gertrude Stein, 72

AUGUST

THE SWOONERS swooned to "To Each His Own," which the radio sang at us; and the bookstores sold us "The Hucksters," which revealed that advertising men are only human, or almost. The Paris Peace Conference was so unpeaceful that Senator Tom Connally said, "They sit all day and go ya-ya-ya." At home the seventy-ninth Congress quit going ya-ya-ya and adjourned for the longest vacation in eight years. In Athens, Tenn., the H.I. Non-Partisan League whipped out its guns and chased all the local officials out of town, by way of ending political corruption with a bang. The phrase "Kilroy Was Here" bored us almost to its own extinction, but not quite yet.

- 1 Truman signs civilian atom-control bill.
- 2 Italian police find stolen body of Mussolini in a trunk hidden in a monastery near Milan.
- 2 British halt refugee ships bringing to Palestine European Jews who have no immigration permits; they are transhipped to detention in Cyprus.

- 13 Russia demands from Turkey a share in the military control of the Dardanelles.
 - 13 La Follette dynasty in Wisconsin is overthrown when Republicans fail to renominate Sen. Robert M. La Follette.
 - 19 Yugoslavs shoot down U. S. Army transport plane flying over a corner of Yugoslavia; all aboard die.
 - 20 U. S. sends stiff protest to Yugoslavia.
 - 29 Security Council votes to admit Sweden, Iceland and Afghanistan to U. N. membership. Russia vetoes applications from Eire, Portugal, Trans-Jordan; Council rejects applications from two Russian satellites: Albania and Outer Mongolia.
 - 29 Col. James Killian, who commanded U. S. Army jail in Litchfield, England, is convicted of cruel treatment of American soldier-prisoners; fined \$500.
 - 29 Russia demands that the Security Council find out how many troops England and the U. S. maintain in nations other than ex-enemies.
- DIED:** H. G. Wells, 79; James C. McReynolds, 84.

SEPTEMBER

THE PIGS and sheep and steers went on strike. Price ceilings went back on meat, meat vanished, butcher shops closed, we all became vegetarians like G. B. Shaw. President Truman fired Henry Wallace from the Cabinet for saying Secretary Byrnes was too tough with Russia. The stock market took the worst nosedive in sixteen years, wiping out an estimated \$9 billion of paper wealth. But the prices of things kept going up. By mid-month the value of the dollar had shrunk to 69 cents in terms of what it would buy. Housewives not only were frustrated for meat, but also scrambled for soap, sugar, salad oil.

- 1 Greece votes to bring back King George II, in exile in London since Germans overran Greece.
- 2 First all-Indian government inaugurated; Jawaharlal Nehru heads Cabinet.
- 4 Soviet Ukraine tells Security Council British troops in Greece menace world peace.
- 5 A. F. of L. seamen go on strike, tying up all U. S. ships.
- 8 Nine-year-old King Simeon II of Bulgaria loses his throne as nation votes to abolish monarchy.
- 8 British war veterans, unable to find houses, storm into empty luxury apartments in London.

- 10 Price ceilings restored on U. S. meat.
 - 13 Striking A. F. of L. seamen win wage demands, go to work.
 - 14 Seamen belonging to C. I. O. strike to get as much as A. F. of L. men; ships tied up.
 - 15 Shipping strike ends; wage demands are met.
 - 17 Soviet Russia reveals widespread purge of collective farm officials suspected of grafting.
 - 20 Truman fires Wallace from the Cabinet.
 - 20 Security Council rebuffs Russia, refusing to act against British troops in Greece.
 - 22 W. Averill Harriman succeeds Henry Wallace as Secretary of Commerce.
 - 24 Stalin says he sees no real danger of war with U. S. and Britain.
 - 28 Yugoslavia says it won't sign peace treaty with Italy as drawn up by Paris Conference, because it gives too much territory in Trieste area to Italy.
 - 30 Nineteen Nazi leaders found guilty at Nuremberg.
- DIED:** George Washington Hill, 61; Sir James Jeans, 69.

OCTOBER

THOSE STEERS that went on strike last month clogged the highways of the Mid West in their rush to get their necks under the slaughterhouse ax. In the absence of price control, steaks jumped to \$1.25 a pound; pork chops to \$1.00; hamburger to 69 cents. A \$100-a-week cashier embezzled almost a million dollars in ten months from his firm, the Mergenthaler Linotype Company. The Duke and Duchess of Windsor went back to England for the first time in seven years. They were welcomed five days later by thieves who climbed the drainpipe and eased off with \$80,000 worth of the Duchess's jewels. The Gallup Poll said 32 percent of the people approved President Truman's management.

- 1 Eleven Nazis sentenced to die by Nuremberg tribunal; seven sent to prison; three acquitted (Von Papen, Schacht, Fritzsche).
- 1 The Truculent Turtle, Navy plane, sets nonstop distance record, flying 11,236 miles from Perth, Australia, to Columbus, Ohio, in 55 hours, 15 minutes.
- 1 Shipping strike begins; deck officers walk out for more money.

- 4 Truman urges England to allow Jews to enter Palestine, regardless of Arab opposition.
- 6 Army B-29, Pacusan Dreamboat, lands in Cairo after flying over top of the world nonstop from Honolulu, 10,925 miles in 39 hours, 36 minutes.
- 11 Army cancels draft calls for the rest of the year.
- 12 Henry Wallace becomes editor of "The New Republic" magazine.
- 13 France adopts a new constitution, by narrow margin of 1,000,000 votes, despite De Gaulle's opposition.
- 14 Truman abolishes price control on meat; orders O. P. A. to speed decontrol generally.
- 15 Paris Peace Conference adjourns; disputed points will go back to Council of Foreign Ministers for final decision.
- 16 Goering kills himself with cyanide of potassium a few hours before ten other Nazis are executed at Nuremberg.
- 18 Byrnes says he is worried by "the continued if not increasing tension between us and the Soviet Union."
- 20 Berlin holds first municipal elections; Social Democrats win; Communists badly trounced.
- 21 Russia seizes thousands of skilled German workers, deporting them to Russia to work there.
- 21 First big airline strike begins; pilots quit on Trans World Airline, stranding passengers in Rome, Algiers, Ireland.
- 23 U. N. General Assembly opens in New York.
- 25 O. John Rogge is fired from Department of Justice for revealing prewar Nazi links of John L. Lewis, Burton K. Wheeler, and others.
- 28 Stalin denies Russia has atomic bomb.
- 28 Shipping strike ends on Atlantic and Gulf coasts; costliest in U. S. history.
- 28 Truman appoints David E. Lillienthal chairman of Atomic Energy Commission for U. S. Control.

DIED: General Joseph W. Stilwell, 63; Gifford Pinchot, 81; Barney Oldfield, 68.

NOVEMBER

THROUGHOUT the land in this election month there echoed the deadly two-word slogan of the Republicans: "Had Enough?" The people went to the polls and answered *yes*, and put Republicans in charge of both Houses of Congress for the first time since 1928. So this country moved toward conservatism while most of the rest of the world was moving in the opposite

direction. People suggested that President Truman resign and make room for a Republican President, but he was not interested. In Connecticut the traffic problem was licked by a homemade automobile which drove up to the airport, put on wings and flew away. In New York the Metropolitan Opera resumed with all its glitter, and one of the five fabulous bracelets on the right arm of Mrs. George Washington Kavanaugh flew away, despite the presence of her bodyguard; three days later this little \$5,000 bauble of platinum, diamonds and emeralds was returned by an honest housewife who had found it in the lobby on her way up to the topmost gallery. This country shed its wartime price controls, and whisky went up to about \$8 a bottle. Sugar reappeared, and meat; but jelly vanished from the marts. So did rice. A resourceful papa showered his daughter with Wheaties at her wedding. Editor Ralph Ingersoll vanished from the adless newspaper he had founded, New York's "PM", when owner Marshall Field decided he'd rather take in ads than shell out more millions. And at the end of the month, the nation's lights were dimmed, railroad traffic was cut down, factories began closing. For John L. Lewis and his 400,000 miners were on the warpath again. Judge Goldsborough ordered Lewis to call off his newest strike, but Lewis preferred to go on trial for contempt of court.

- 3 Emperor Hirohito promulgates Japan's new constitution, which forbids war forever.
- 4 Big Four Council of Foreign Ministers meets in New York, hoping to complete peace treaties for Italy, Hungary, Rumania, Bulgaria and Finland.
- 4 British disclose that Hindu-Moslem riots in India have cost 5,081 lives in the last four months.
- 5 Republican landslide overturns Democratic control of Senate and House.
- 6 Senator Fulbright, Arkansas Democrat, suggests Truman resign and let a Republican be President, so government won't be stalemated.
- 6 U. S. announces it will put Pacific islands wrested from Japan under United Nations trusteeship, on condition we are permitted to bar outsiders any time.
- 9 Truman ends all price and wage controls, except on rents, sugar and rice, effective Nov. 11.

- 10 France holds first election under new constitution; Communists become leading party.
- 12 Dutch end 15-month strife in Java by tentatively recognizing Indonesian Republic.
- 14 Victorious Republicans say they will cut income taxes 20 percent when new Congress meets in January.
- 15 Chinese National Assembly convenes to draw up new constitution. Chinese Communists boycott it and prepare to fight.
- 15 John L. Lewis gives signal for coal strike Nov. 21 in defiance of government operation of the mines.
- 17 C. I. O. announces that it will "resent and reject" Communist Party interference in union affairs.
- 18 Federal Judge Goldsborough issues restraining order telling John L. Lewis to retract his signal for mine strike.
- 20 Moslem League announces boycott of constitutional assembly to set up a free India; the League objects to Hindu predominance.
- 21 Soft coal miners strike. Lewis ignores court order.
- 22 Federal Court dismisses sedition case against twenty-six Americans who were put on trial, accused of pro-Nazism, in 1944.
- 24 Swiss flyers rescue twelve Americans marooned five days on an Alpine glacier after Army plane made forced landing.
- 24 First German state in U. S. occupation zone—Wuerttemberg-Baden—adopts a democratic constitution and flies the old black, red and gold flag of the pre-Hitler German Republic.
- 25 Railroad traffic is reduced and nationwide dimout is put into effect to save coal because of strike.
- 25 Students riot in Cairo, protesting proposed new treaty with England; they demand British withdraw at once.
- 26 Shipload of Jews, trying to enter Palestine without permits, battle British troops moving them to transports for deportation to Cyprus.
- 27 New York court rules Edmund Wilson's "Memoirs of Hecate County" an obscene book and fines publisher \$1,000; one of the three judges dissents.
- 27 United Nations General Assembly committee calls for census of all nations' armed forces at home and abroad by Jan. 1.
- 28 Georges Bidault resigns as Premier of France, so new legislature can elect a temporary successor.

- 28 Russia reverses stand and tells United Nations General Assembly it favors principle of international inspection system for control of armaments and atomic energy.
- 29 Judge Goldsborough puts John L. Lewis on trial for contempt of court for failing to call off coal strike.
- 29 Paul Porter resigns as Price Administrator; the agency will be liquidated, since few price controls remain.
- 30 British military court in Rome condemns to death two German generals responsible for massacring 335 Italian hostages during the war in the Ardeatine caves.

DIED: James J. Walker, 65; Henry Morgenthau Sr., 90.

DECEMBER

THE month began with the nation's most perturbing post-war labor dispute. John L. Lewis had his 400,000 miners twiddling their thumbs, while factories began closing, lights grew dim, trains stopped carrying freight except essentials. A Federal Judge ordered Lewis to send the miners back; he ignored the order. The judge fined the United Mine Workers \$3,500,000, Lewis, \$10,000 for contempt of court. As anger and pressure grew, Lewis dramatically called off the strike on its seventeenth day until April 1.

The international picture seemed to be clearing. After more than a year, the Big Four Council of Foreign Ministers agreed on treaties for Italy, Rumania, Hungary, Bulgaria and Finland. The Council agreed to draft the German Treaty in Moscow, beginning March 10. Sudden about-faces removed two of the biggest obstacles to armament reduction and atom control. Russia agreed to an international inspection system and once an inspection system was set up no nation should have power to veto its operations.

- 1 Miguel Alemán inaugurated President of Mexico. Friendly to the United States, he hopes for a loan. Bavaria and Greater Hesse adopt democratic constitutions.
- 2 Federal court in Chicago holds unconstitutional the Lea Act, passed to curb James Caesar Petrillo, president of the American Federation of Musicians. Britain and U. S. sign agreement for economic merger of American and British zones of occupation in Germany. U. S. proposes that the United Nations

call on the people of Spain to depose Generalissimo Franco.

- 3 Truman nominates O. Max Gardner as American Ambassador to the Court of St. James's. Wilson W. Wyatt, Housing Administrator, resigns. Oakland, Calif., is crippled by a general strike.
- 4 Greece demands U. N. investigate guerrilla warfare in northern Greece; accuses Yugoslavia, Rumania and Bulgaria of aiding rebels.
- 5 Council of Foreign Ministers completes peace treaties for Italy, Rumania, Hungary, Bulgaria and Finland.
- 7 Worst disaster of the year in U. S.—pre-dawn fire sweeps Winecoff Hotel in Atlanta, Ga., killing over 120. John L. Lewis calls off coal strike because of "public necessity."
- 8 U. N. Assembly asks Security Council to reduce use of big-power veto.
- 9 Council of Foreign Ministers agrees to meet March 10 in Moscow to draft peace treaties for Germany and Austria. The *Europa* sinks in a gale at Le Havre, and hits hulk of the *Paris*.
- 10 Iranian troops march into Azerbaijan, and fighting begins. U. N. E. S. C. O. ends first conference in Paris, with Julian Huxley as Director-General.

DIED: Walter Johnson, 59; Damon Runyon, 62; Leo S. Rowe, 75; Big Bill Dwyer, 63.

MAYBE every year is cock-eyed in this land of ours, but this one seemed cockier-eyed than usual. It set new records in strikes, songs, soaring prices. Four and a half million workers were involved in strikes. Three million phonograph records were sold. But just look at some of the prices—a ready-made shirt at Altman's, \$17.50; a couple of hair-brushes at Mark Cross, \$150; a nice round hamburger for lunch at a New York club, \$2.75. You got no bread with one meat ball; you tipped the bus-boy half a buck for your glass of water, the waiter a buck for bringing the hamburger, the maitre d'hôtel a buck or two for letting you eat in the joint. Saks-Fifth Avenue sold you a cigar for \$1.50, and kept it fresh until you were prepared to smoke it. There were omens that prices wouldn't stay quite so high. Seventeen days before Christmas people weren't shelling out the way they should. Altman's knocked down a bowl from \$395 to \$250; Jay Thorpe slashed a mink coat from \$10,000 to \$6,000. High on the best-seller list was a book by Joshua Loth Liebman entitled "Peace of Mind." Boy, did we need it!

Elections Abroad in 1946

IN 1946 there were strange contrasts in expressions of the popular will. Simeon II of Bulgaria was removed from his throne by a plebiscite whereas George II of Greece regained his throne the same way. Poland and Iran postponed scheduled elections beyond the year while the French went to the polls eight times. Some countries moved to the left, others to the right, still others remained in the center. Elections returns, not always complete, represent the latest available figures.

ARGENTINA.—Juan Domingo Perón was elected President for a six-year term, with an overwhelming majority in both houses of Congress. He received 1,474,444 popular votes and 304 electoral votes to José Tamborini's 707,359 popular and 72 electoral votes.

AUSTRIA.—On November 25, the Catholic People's party, a rightist group, won 84 seats in the National Assembly, whereas the Socialists won 76 and the Communists 5.

BELGIUM.—On February 17, the left wing group won control of the Chamber of Deputies when the Socialists won 69 seats, the Communists 24 and the Liberals 17, compared to the Christian Socialists 92. However, the Senate was won by the latter party with 54 seats to a combined 50 for the opposition. The Christian Socialists also won 344 of the 696 Councilships in the provincial elections. Thus, Belgium has a left wing Chamber of Deputies and a right wing Senate. The Cabinet under Huysmans, chosen Aug. 2, is composed of Socialists, Liberals and Communists.

BOLIVIA.—On July 22, an armed revolt by workers and students overthrew the government and resulted in the hanging of President Gualberto Villarroel from a lamp-post in La Paz. A provisional government was set up under Nestor Guillen. On August 16, Tomás Manje Gutiérrez became Acting President.

BULGARIA.—By plebiscite on September 8, 92 percent of the voters of Bulgaria voted to oust Simeon II and make Bulgaria a republic. On October 27, the Communist Fatherland Front, consisting of the Bulgarian Worker's party, the Agrarians, the National Union party, the Socialists and the Radicals, received 2,980,175 votes (54 percent of all cast) and gained 364 seats in the National Assembly. The remaining 601 seats were won by the Bulgarian Democrats, dissident Agrarians and Social Democrats, who together polled 1,230,960 votes. Communist Georgi Dimitrov became Premier on November 22.

CHINA.—China's first national Constitutional Assembly in nearly twelve years met at Nanking on November 15, to adopt a Constitution for the Chinese Republic and thus end one party rule. The Assembly, which was to be attended by 2050 delegates from all parties, opened with the Communists boycotting the meeting. The Youth party and the Social Democratic parties also failed to attend the opening.

CZECHOSLOVAKIA.—2,695,965 of the 7,067,356 votes cast went to the Communists on May 27, giving them 114 seats in the Assembly. A coalition of the Communists, Social Democrats and Slovakian Laborites controls 152 of the 300 seats. The 148 rightist representatives include National Socialists, People's party, Slovakian Democrats and Slovakian Freedom party.

ECUADOR.—The June 30 elections gave the Conservatives 33 seats in the Assembly, dissident Liberals 20, Independents 6, dissident Leftists 2, Democrats 1. Liberals, Socialists and Communists abstained from voting. On August 11, the Constituent Assembly, by a vote of 43 to 10, re-elected José María Velasco Ibarra as President.

FRANCE.—On May 5, by plebiscite, the French rejected a Communist-Socialist constitution. On October 13, they accepted a new constitution. This one creates a Chamber of Deputies with sole power of legislation, a Council of the Republic, and a President to be elected by the Assembly.

Election results were:

Party	Assembly seats	Votes
Popular Republicans	160	5,589,130
Communists	148	5,203,046
Socialists	120	4,198,110
Radical and Allied	59	2,179,067
Rightists	57	2,623,679
November 10—		
Communists	163	5,475,955
Popular Republicans	160	5,033,430
Socialists	93	3,454,080
Radical and Allied	59	1,975,660
Minor	99	3,136,630
To be elected (from colonies)	45

GERMANY.—There were no national but many local elections in Germany in 1946. On May 27, thirty-eight cities in the United States Zone gave Christian Socialist Union 484 Council seats, Social Democrats 421, Communists 47 and Liberal Democrats 34. On September 1, the Socialist Unity (Communists and Socialists) won 56 percent of Saxony's municipal elections to 22 percent each for the Christian Democratic Union and Liberal Democrats in the Russian Zone. On October 13, the Christian Democrats gained control in the British Zone and in the French Zone.

The Berlin City Council elections resulted in defeat for the Russian-supported Socialist Unity party on October 20. The Social Democrats received 948,851 votes,

the Christian Democrats 432,016, the Socialist Unity 383,247 and the Liberal Democrats 181,835.

Bavaria, on December 2, elected 104 Christian Socialist delegates; Social Democrats won 54, Economic Reconstruction party 13, the Free Democratic 9, and Communists none.

GREECE.—As a result of the election of March 31, boycotted by the leftists, the Populists won 191 seats; the National Bloc, 56; Liberals, 42; Zervas, 17; Tourkavassilis, 8; Independents, 3.

On September 1, by 1,135,675 to 451,540, the Greeks restored George II as King.

HUNGARY.—By assembly vote on February 1, Hungary became a republic with Zoltan Tildy as President. On November 4, parliamentary elections resulted in the Small Holders party (Conservatives) receiving 60 percent of the vote, Communists and Socialists 25 percent together and the rest scattered among the Peasant, Democratic, Citizens and Radical parties.

ITALY.—The Court of Cassation announced, on June 18, the abolition of the monarchy because 12,717,923 people voted for a republic and only 10,719,284 for the retention of Humbert II. Constituent Assembly elections resulted as follows:

Christian Democrats, 207; Socialists, 115; Communists, 104; National Democratic Union, 44; Common Man, 30; Republicans, 23; National Freedom Bloc, 16; Action party, 7; minor parties, 13.

JAPAN.—As a result of the April 10th parliamentary elections, Conservatives, despite party names, won a complete victory. The Diet included 139 Liberals, 92 Social Democrats, 91 Progressives, 84 Independents, 38 minor party delegates, 16 Cooperatives, 5 Communists.

PHILIPPINE ISLANDS.—Manuel Acuna Roxas defeated Sergio Osmeña for the Presidency on April 29. Although Roxas had been accused of collaboration, Paul V. McNutt exonerated him on December 2.

RUMANIA.—In an election on November 19, whose fairness and freedom was questioned by the United States and Great Britain, the Communist-dominated National Democratic Front was voted into power, receiving 4,766,360 votes against the 879,927 for the nearest competitor, the National Peasant party. The vote gave the National Democratic Front 348 seats in Parliament to 32 for the National Peasant party, 29 for the Hungarian Peoples Union, 3 for the National Liberal party, and 2 for the Democratic Peasant party.

World War II Peace Treaty Obligations

The Big Four Foreign Ministers' Council on Dec. 5 set peace terms for satellite nations, to be signed in Paris in February. Terms for Germany and Austria will be fixed in Moscow in March.

ITALY.—Army, 250,000; navy, 22,500; air force, 25,000.

Reparations: \$100,000,000 to USSR; \$125,000,000 to Yugoslavia; \$105,000,000 to Greece; \$25,000,000 to Ethiopia; \$5,000,000 to Albania.

Territory Loss: All lands east of French line to Yugoslavia; Free Territory of Trieste; Adriatic islands to Yugoslavia; Briga and Tenda and small area north to France. All African colonies and Dodecanese Islands.

Compensation: 66⅔ percent of the value of Allied property damaged in Italy.

Demilitarization: 12 miles deep along French and Yugoslav borders; coastal region of Sardinia and Sicily; Pantelleria and neighboring islands.

RUMANIA.—Army, 120,000; navy, 5,000; air force, 8,000.

Reparations: \$300,000,000 to USSR.

Territory Loss: Bessarabia and part of Bukovina to USSR; southern Dobruja to Bulgaria.

Compensation: 66⅔ percent of the value of Allied property damaged in Rumania.

Free Navigation: Foreign ships on Danube treated equally as regards port charges and other costs.

BULGARIA.—Army, 55,000; navy, 3,500; air force, 5,200.

Reparations: \$45,000,000 to Greece; \$25,000,000 to Yugoslavia.

Territory Loss: None.

Demilitarization: Partial along Greek frontier.

Compensation: 66⅔ percent of the value of Allied property damaged in Bulgaria.

Free Navigation: Same as Rumania.

HUNGARY.—Army and navy of 65,000; air force of 5,000.

Reparations: \$200,000,000 to USSR; \$50,000,000 each to Czechoslovakia and Yugoslavia.

Territory Loss: A few towns south of the Danube to Czechoslovakia; return to Rumania of part of Transylvania.

Compensation: 66⅔ percent of the value of Allied property damaged in Hungary.

Free Navigation: Same as Rumania.

FINLAND.—Army, 34,400; navy, 4,500; air force, 3,000.

Reparations: \$300,000,000 to USSR.

Territory Loss: Petsamo to USSR; other territory mentioned in armistice.

Compensation: 66⅔ percent of the value of Allied property damaged in Finland.

THE ELECTION of 1946

by

ARTHUR M. SCHLESINGER, Jr.

THE Republican gains in the mid-term elections of 1946 represented primarily a widespread protest vote rather than a positive and clear mandate on questions of policy. The protest had its origins in the feeling that wartime controls had been maintained too long; in the dissatisfaction over the meat shortage of October, over the housing shortage, over the slow resumption of production and the scarcity of many desired consumers' goods; and in the misgivings created by the Truman-Wallace imbroglio over foreign policy. All these factors combined to create a broad and undiscriminating revulsion against the party in power and a strong desire for change.

The elections thus produced Republican majorities both in the House of Representatives and the Senate. This marks the fourth time since the Civil War that the opposition party has been in control of Congress. The other occasions were the 46th Congress (1879-81), when the Democrats were in control during the second half of Rutherford B. Hayes's presidency; the 54th Congress (1895-97), when the Republicans were in control during the second half of Grover Cleveland's second term; and the 72nd Congress (1931-33), when the Democrats were in effective control during the second half of Herbert Hoover's presidency (the Republicans retained a purely technical majority in the Senate). Each of these periods was marked by legislative stalemate and executive frustration.

In an effort to solve the difficulties created when one party controls the executive branch and the other the legislative, it has been suggested that President Truman resign, naming a Republican as Secretary of State and thus as his successor. This plan represents an attempt to adapt the British system of ministerial responsibility to the American political structure. In this particular form, it has no precedent in American history. Woodrow Wilson, if he had lost the election of 1916, had planned to make Charles Evans Hughes his successor immediately and thereby eliminate the delay (then four months) in the transfer of responsibility; and he seems later to have played with the idea of asking senators opposed to the League of

Nations to resign and run again as a test whether they or he represented public opinion more accurately. But the mid-term election of 1918, which amounted to a virtual vote of non-confidence, did not lead him to think along the lines of resignation.

The resignation plan, as first proposed, had the serious disadvantage of allowing the resigning president to appoint his successor and thus denying the people their proper role in the selection of the president. To meet this objection, some commentators have suggested the revival of the Act of 1792 which provides for a new election whenever the presidency becomes vacant, whether because of death or for other reasons, including resignation.

The Republican victory in 1946 also marks the end of the cycle of liberalism which has dominated the country since about 1930. It has been calculated that periods of conservatism and liberalism succeed each other at fairly regular intervals (though this may be expressed in terms of change of direction within a party as well as displacement of one party by the other). American political history falls roughly into the following such periods:

*1765-1787
1787-1801
*1801-1816
1816-1829
*1829-1841
1841-1861
*1861-1869
1869-1901
*1901-1918
1918-1931
*1931-1946

(see Arthur M. Schlesinger, "Tides of American Politics," *Yale Review*, xxix, 217-230, December, 1939).

The average length of each period is 16.6 years; and, omitting the atypical years between 1861-1901, the average length of each conservative period is 15 years, of each liberal period is 16.5 years. In view of the increased speed of modern life, of the expanded American involvement in world affairs and the ever-present possibility of economic depression, it is impossible to know to what extent these past tendencies will continue to hold good for the future.

*Leftward.

Author of *The Age of Jackson*

1946 Pulitzer Prize winner in History

States and Territories, Presidential election tables and other pertinent national and state information compiled from official sources.

THE RISE OF THE UNITED STATES

BY ARTHUR M. SCHLESINGER, SR.

1. Under the English Flag

The land now comprehended within the United States once belonged to Spain, France, England, Holland and Sweden. Spain, colonizing from Mexico in the sixteenth and seventeenth centuries, expanded over most of the Gulf Coast, Texas and the border zone westward through California. France, moving down from Canada in the eighteenth century, annexed the Mississippi Valley from the Appalachians to the Rockies. Meanwhile, in the seventeenth century, the English began peopling the Atlantic shore, and finding the Dutch already established in the present New York and the Swedes in Delaware, seized their possessions. The so-called first Americans, the Indians, resisted the encroachments at their peril.

Notwithstanding this varied international background, United States history has been largely the product of influences emanating from the seaboard communities. Unlike the Spanish and French, the English regarded their colonies as genuine extensions of the homeland, and the settlers sowed English customs, institutions and speech so thoroughly that they eventually spread everywhere. True, the transplanted ways underwent modification, but this arose from necessities imposed by a wilderness existence and, as time went on, from a growing sense of self-sufficiency.

Organized settlement began in 1607 at Jamestown, where the first representative assembly was set up in 1619. The Pilgrims followed at Plymouth in 1620, spearheading a much larger migration of Puritans into New England. Later in the century the Quakers occupied a midway region owned by William Penn, making Philadelphia their headquarters and fanning out in every direction. By 1700 all the thirteen colonies existed but the southernmost, Georgia, which came into being in 1733. The settlers crossed the ocean to escape economic, religious and political oppression and to start anew in a land of greater opportunity.

In time, other strains reinforced the original English population: French Huguenots, Scotch Irish, Germans and minor groups, including the Dutch and Swedes already on hand. African slaves, first introduced at Jamestown in 1619, were welcomed in all the colonies, though the economic need for them was greater in the South, and the system took deeper root there than elsewhere. The people in the North engaged mainly in small farming, fishing and commerce, the Southerners largely in plantation production. Everywhere the colonists practiced self-government. When they clashed with the English-

appointed governors, they usually won out by withholding appropriations.

As the population penetrated farther inland, the settlers encountered the French guarding Canada and the eastern fringes of the Mississippi Valley. In a succession of wars (1689-1763), paralleling greater struggles between the parent nations abroad, France was finally ejected from North America and Britain's dominion extended to the Mississippi. Spain fell heir to the country west of the river, though some years later Napoleon was temporarily to reclaim it for France.

2. Birth of the Nation

With the removal of the Gallic menace the colonists felt less dependent upon the mother country militarily, and England's change from her former policy of "salutary neglect" aroused active resentment. A series of revenue measures, starting with the Sugar Act of 1764, provoked meetings of protest, nonimportation pacts and mob demonstrations in America. Colonial home rule was at stake, also freedom of trade, and the provincials appealed to the principle: "No taxation without representation." Parliament's action in 1774 penalizing all Massachusetts for the deed of a few in dumping dutied tea into Boston Harbor led to the first armed clash at Concord and Lexington on April 19, 1775; but a year and more passed before the patriots resolved upon the hazardous step of independence. The famous Declaration of July 4, 1776, penned by Thomas Jefferson for the Second Continental Congress, justified revolution as the only means to guarantee the "unalienable Rights" of "Life, Liberty and the pursuit of Happiness." Under George Washington as commander in chief the fighting shifted from New England into the middle states and then into the south. General Gates's victory at Saratoga on October 17, 1777, brought England's ancient enemy, France, into the war; just four years later the British yielded to the Allies at Yorktown. The Peace Treaty in 1783 recognized the United States as stretching to the Mississippi.

The infant, though born and baptized, had yet to be weaned. The league of states, formed under the Articles of Confederation in 1781, proved too weak either to deal effectively with foreign countries, or to raise necessary funds, or to ensure unrestricted domestic trade. Within the states, however, Revolutionary idealism prompted action to forbid primogeniture and tax-supported religions, and the Northern commonwealths abolished slavery, a prohibition which Congress's Ordinance of 1787 extended to the territory north of the Ohio. Feebleness of government, combined

with social disturbances culminating in Shays's Rebellion in Massachusetts, made sober men tremble for the sanctity of property rights and seemed to cloud the nation's future. The Federal Convention, summoned in 1787, designed a new framework after much wrangling between rival interests and sections.

The Constitution established a government of three separate and coordinate departments—legislative, executive and judicial—each endowed with adequate power, and each to serve as a check and balance on the others. Within its own sphere the general government was supreme, and it exerted its will not through state officials, as under the Articles of Confederation, but immediately upon individuals. Direct popular representation was limited to the House of Representatives, the Senate being chosen by the legislatures (a system which lasted till 1913), the President designated by Electors (who in practice, however, quickly lost their deliberative function), and the Supreme Court appointed by the President and Senate for life. Opposed in many states because of its centralizing and undemocratic features, the Constitution eventually won adoption on the assurance that a bill of rights would be added to preclude federal interference with civil liberties such as freedom of speech, the press and religion. The first ten amendments, in 1792, fulfilled the promise.

Perhaps no convention would have ratified the Constitution if it had been realized that an indivisible Union would ensue. The framers, engaged in the practical task of curing the defects of the Confederation government, strewed phrases through the document that had contradictory implications. On the basis of the text it was possible for equally honest men to maintain that the states were more powerful than the nation, or that the nation overtopped the states. At one time or other nearly every legislature, given what it considered sufficient provocation, asserted the right of nullification or secession. Short of such extreme doctrines, controversy began almost immediately over the question of whether the Constitution should be construed broadly to enhance the national authority or narrowly to lessen it.

Under George Washington, President from 1789 to 1797, the new government became a going concern. Congress, guided by Secretary of the Treasury Alexander Hamilton, buttressed the public credit by arranging to pay at par the national debt and the war-incurred state debts and by creating a United States Bank modeled upon the Bank of England. These measures, especially the last, alarmed Jefferson, veteran liberal and Washington's Secretary of State. Fearing that the legislation would build up a dangerous moneyed class, he urged a strict interpretation of the Con-

stitution in opposition to Hamilton's loose-construction views. The French Revolution widened the breach, for the Jeffersonian Democrats applauded as an upsurge of liberty what the Federalists dreaded as an irruption of chaos. But both men, knowing America's defenseless state, backed Washington's decision to maintain neutrality in France's war with England. Returned to power under John Adams, the Federalists in 1798, however, declared naval hostilities against France and passed the Alien Sedition Acts to muzzle opposition criticism. Though Adams, defying his party, prevented a full-scale war, he lost the election of 1800 to Jefferson. The Federalists never saw office again.

3. Democracy and Nationalism

The farming interest, which Jefferson deemed the bulwark of free government, had steadily increased since the Revolution. As settlers trekked inland, new states joined the original thirteen: Vermont, Kentucky and Tennessee in the 1790's, with Ohio and others shortly to follow. Pioneer life begot an intense individualism, fostered political and economic democracy, stimulated nationalism. In the South, by contrast, Eli Whitney's invention of the cotton gin in 1791 opened the way for plantation agriculture and Negro slavery to expand westward beyond the Mississippi. The growth of manufacturing in the Northeast introduced a third element into the scene. The rivalries of these sectional forces wove the principal strands of American history until the Civil War. Toward the mid-century the situation was further confused by the spread of manhood suffrage and a sudden mass immigration from Ireland and Germany.

Jefferson inaugurated the "Virginia Dynasty," his eight years giving way to two terms each of James Madison and James Monroe. He performed his greatest service by purchasing Louisiana from Napoleon in 1803, an act which, though violating his constitutional scruples, carried the flag to the Rockies and vastly enlarged the agricultural domain. With France and England again locked in conflict, depredations on American commerce gave constant provocation to war, but the peace-loving Jefferson applied economic sanctions in the form of an embargo keeping merchantmen at home. Such measures failed, however, and under Madison in 1812 Congress, goaded by the Warhawks, mostly Westerners, declared war on England. Unlike France, she had compounded her offenses by impressing American sailors and, moreover, lay exposed to land attack in Canada. But the assaults on Canada miscarried, and Britain's attempts at counter-invasion with veterans freed by Napoleon's defeat in 1814 fared little better.

Unhappily, Andrew Jackson's victory at New Orleans on January 8, 1815, occurred several weeks too late to affect the Peace Treaty of Ghent, which settled none of the prewar disputes.

Nevertheless the war experience greatly accelerated American nationalism. In 1816 Congress enacted the first protective tariff and chartered a new United States Bank on the model of Hamilton's. In 1819 the country acquired the Gulf region from Spain, who chose to sell rather than have it seized. In 1823 the President, prompted by successful revolutions in Latin America, proclaimed the Monroe Doctrine, warning Europe to keep hands off this new area of freedom.

Other events, however, prefigured growing sectional discord. Opposition to admitting Missouri as a slave state was ended in 1820 only by Congress's agreeing that the rest of the Louisiana Purchase north of the parallel marking her southern boundary should be free soil. Successive tariffs alienated Southerners as class legislation discriminating against their welfare. Touted by the astute South Carolinian, John C. Calhoun, they refurbished the doctrine of state rights as defensive armor. John Quincy Adams's administration (1825-1829) did nothing to improve conditions, and the advent of his successor, Jackson, precipitated a crisis.

Old Hickory, as indomitable in peace as in war, acted boldly against divisive tendencies, whether from the slavocracy or the money power. When South Carolina nullified the Tariff of 1832, he prepared for military action, whereupon the state accepted Congress's olive branch of a lower scale of duties. He smote financial privilege by destroying the Second United States Bank, which wielded monopolistic control over the nation's credit facilities. After eight years Jackson's lieutenant, Martin Van Buren, took over, but a business depression following the Panic of 1837 so discredited his administration that in 1840 the Whigs uproariously elected William Henry Harrison in the famous log-cabin campaign. He died after a month in office, however, and the Whigs fared hardly better with his unintended successor, John Tyler, whose strict-constructionist predilections foiled their plan to establish a third national bank.

Within the free states these years witnessed a ceaseless ferment of humanitarian agitation: crusades for public education, temperance, prison reform, labor's rights, women's rights. Humane people, viewing slavery as an anachronism and a sin, formed organizations to urge its abolition. The moderate-minded, content with demanding its exclusion from the territories, founded a series of unsuccessful parties, beginning with the election of 1840. The

South, frightened by these threats to its cherished institution, found little good in any of the movements and regarded the restless North with mounting apprehension.

4. Sectional Conflict

Western expansionist zeal plus the Southern desire for more slave territory elected James K. Polk over his Whig rival, Henry Clay, in 1844. When the outgoing Congress executed the Democratic pledge to annex Texas, Polk proceeded to high-pressure England into partitioning the jointly held Oregon country at the forty-ninth parallel, and in 1846, while that was still under way, contrived a war with Mexico to acquire California and the territory eastward to Texas. American forces quickly overran northern Mexico and California, but a fiercely contested march from Vera Cruz through the mountains to Mexico City proved necessary before Polk achieved his goal in the Treaty of Guadalupe Hidalgo early in 1848.

The conquests approximately completed the present continental boundaries. The immediate effect, however, was to arouse sectional dissension over the question of slavery in the new Southwest. Zachary Taylor, elected by the Whigs in 1848, died in office after sixteen months, leaving the crisis in the lap of Millard Fillmore. The Compromise of 1850, piloted through Congress by Henry Clay, admitted California as a free state, left slavery in Utah and New Mexico territories to future judicial determination, and disposed of other disputes. But the settlement soon turned into unsettlement, for Fillmore's Democratic successors, Franklin Pierce and James Buchanan, supported pro-Southern policies.

The Kansas-Nebraska Act of 1854, authorizing slavery by "popular sovereignty" in the country west of Missouri and Iowa, outraged Northerners as a base repudiation of the historic Missouri Compromise. Guerrilla warfare followed in Kansas, while in the free states the old-time antislavery elements joined with dissident Whigs and Democrats to organize the Republican party. The Republicans insisted that slavery be kept out of all federal territories. Angry contests on the floors of Congress operated like a war of nerves, convincing each side that the other was plotting its ruin. John Brown's insane attempt in 1859 to incite a servile insurrection merely poured oil on the flames. When the Republicans in 1860 elected Abraham Lincoln over a divided Democratic opposition, eleven slave states, appealing to state-rights principles, seceded and established the Confederate States of America.

For the hostilities that ensued, the North possessed the long-run advantage

of superior economic resources and man power, but before these could come into play, the South hoped to win by military prowess and perhaps by the intervention of England, which needed Southern cotton. England, however, never went quite so far, and the Southern authorities failed also to reckon with the inspired leadership of President Lincoln, who taught his people that the preservation of the Union involved not only their country's future but the democratic hope everywhere. While the North went about establishing a blockade by sea, the Confederates under Robert E. Lee brilliantly repulsed repeated land attacks on their capital, Richmond, and countered with battles on Northern soil at Antietam in 1862 and Gettysburg in 1863. But in the west they steadily lost ground until the Union forces late in 1864 swept around the southern tip of the mountains into Lee's rear and, by a pincers movement with Ulysses S. Grant before Richmond, brought final defeat the following April. As soon as military fortunes favored, Lincoln under his war powers proclaimed the emancipation of slaves in all unconquered states and districts, and the Thirteenth Amendment in 1865 universalized the decree. America at long last had caught up with the preamble of the Declaration of Independence.

Even prior to his re-election in 1864, Lincoln "with malice toward none" announced a plan to ease the return of the Southern states to their former place in the Union; but before much could be accomplished, his assassination on April 15, 1865, brought into office Andrew Johnson, who shared his views of reconstruction without his gifts of persuasion. Over Johnson's vetoes the Radical Republicans adopted a punitive program. They imposed military rule upon the South, impeached and almost ousted the President, and exacted ratification of the Fourteenth and Fifteenth Amendments before readmitting the last states in 1870. These amendments were designed to make the freedman a full-fledged citizen and voter. Even so, federal bayonets kept Northern-controlled Carpetbag governments in power for several years more.

5. Business and Government

Already the Republicans were changing from a humanitarian party to one of conservative business. The war gave an immense stimulus to economic life, speeding the construction of railways, the exploitation of minerals and other resources, the development of large-scale manufacturing, the accumulation of wealth, and bringing to the fore great captains of industry and finance, who naturally turned for favors to the dominant party. Despite economic depressions after the Panics of 1873 and

1893, this alliance of business and politics governed the country almost uninteruptedly for the rest of the century, putting successively into office Grant (for eight years), Rutherford B. Hayes, James A. Garfield, Chester A. Arthur (for Garfield's unexpired term), Benjamin Harrison and William McKinley (for two terms).

In the Hayes-Tilden election of 1876, however, the Republicans nearly came to grief, partly because of revelations of widespread graft in Grant's second administration, and partly because of disputed electoral returns from the surviving Carpetbag states. A special commission, created by Congress, decided for Hayes by a strictly partisan vote. The Democrats actually won eight years later, the voters preferring Grover Cleveland to James G. Blaine whom they suspected of political corruption. Cleveland, though defeated in 1888, triumphed again in 1892 largely because the Republicans had claimed too much for the beneficence of tariff protection. The Republicans avoided other disasters by harping upon Democratic disloyalty during the war ("waving the bloody shirt") and by catering to the Northern veterans' vote with generous pensions.

Conservative Republicanism met its principal difficulties in Congress, where the Western members, supported usually by Southern Democrats, uneasily resisted capitalistic domination. The Farther West, peopling rapidly after the war, gave a fresh dimension to the nation. Thanks to the attractions of precious minerals, cattle raising and free homesteads, this last frontier yielded steadily to settled communities, and between 1876 and 1896 eight additional states entered the Union. A new sectionalism emerged in politics, for Western needs and aspirations differed at many points from those of the East. The wage earners, too, feared the growing power of Big Business, but despite mounting numbers they lacked political representation and hence concentrated on trade-union methods, forming the American Federation of Labor in 1881. The two depression periods produced violent strikes and upheavals. Labor, however, prevailed upon Congress to place restraints on immigration in order to discourage competition by underpaid workers, especially from Southern and Central Europe.

Legislative struggles nearly always pivoted on issues affecting the new industrial order. The problem of greenback inflation, arising from the war, was finally settled to Eastern satisfaction by the Resumption Act of 1875. The drive for higher and yet higher protection succeeded with occasional setbacks until the Dingley Tariff in 1897 set a record. Congress under Western pressure took ineffective steps in 1887 and 1890 to regulate railways and business combinations, and it made some

early concessions also to the Western demand for free silver. During the Panic of 1893, however, Cleveland induced Congress to stop the inflation; and after the silverites, capturing the Democratic convention in 1896, failed to elect their nominee, William Jennings Bryan, the Republicans reduced silver to a minor coin and committed the country to the gold standard.

Foreign relations reflected similar tendencies, for the expanding industrial system demanded new markets, openings for investment and sources of raw materials. Cleveland withstood imperialistic sentiment, and in 1898 the McKinley administration intervened in the Cuban insurrection under the whip of popular anger at Spanish methods of repression and the explosion of the battleship *Maine* in Havana Harbor. Spain was quickly routed not only in the West Indies but also in her possessions off Asia. Though the "splendid little war" was prompted less by Wall Street than by a superheated sensational press, it bore fruit in the annexation of Puerto Rico, the Philippines and Guam, and brought businessmen further advantages through the quasi protectorate imposed on Cuba (later extended to other Caribbean countries). About the same time Hawaii and American Samoa were acquired, and Secretary of State John Hay's "open door" policy promised a growing trade with China. Theodore Roosevelt, raised to the presidency by McKinley's assassination in September, 1901, further advanced the cause by abetting a revolution against Colombia, thereby assuring the construction of the Panama Canal and much shorter distances within the colonial empire.

In domestic politics, however, Roosevelt aligned himself with the rising sentiment against business-dominated government, preaching with gusto the doctrine of the "square deal," and in his seven years breaking ground for later and more substantial advances. Despite party reactionaries he put teeth into the enforcement of the Antitrust Act of 1890, bullied Congress into tightening control over railroads and industrial monopolies, and initiated measures for conserving the nation's natural resources. William Howard Taft, his choice as successor, quietly pursued similar policies; but Taft's endorsement of the steep Payne-Aldrich Tariff together with other missteps so embittered the reformers that, failing to prevent his renomination in 1912, they organized the Progressive party to run their idol "Teddy" again. The Democrats, facing a divided opposition, elected their candidate, Woodrow Wilson.

Superbly endowed intellectually, and gifted with Jefferson's power to express democratic aspirations, Wilson proceeded with magisterial authority to climax the earlier efforts at reform. The Underwood

Tariff enacted the lowest rates since the Civil War; the Federal Reserve Act superseded an outworn national banking system; and the Clayton Act created the Federal Trade Commission to stop "unfair methods of competition." Two other measures, launched by popular demand during World War I, involved changes in the Constitution. The Eighteenth Amendment in 1920 enacted national prohibition, which ran its stormy course in thirteen years and required the Twenty-first for its undoing. The Nineteenth Amendment (1920) extended to all women the suffrage which some already possessed.

6. World War and After

With America a neutral in 1914 when the European struggle began, the administration's chief energies turned to the protection of maritime rights. Wilson and his countrymen, hating war and traditionally isolationist, only gradually perceived the threat to national security if a militaristic Germany should supplant Britain as mistress of the Atlantic; but Berlin's revival of ruthless submarine operations a few months after Wilson's second election clarified men's minds. Congress, stirred by his appeal that "The world must be made safe for democracy," declared war on April 6, 1917. The government, racing against time, swiftly put the nation on a battle footing, enacting universal conscription, taking over the railways, and regimenting industry, labor and agriculture. It was the country's introduction to total war. In the spring of 1918 Yankee troops under General John J. Pershing helped repulse a great German drive on the Marne and then, in July, shared in the mighty Meuse-Argonne counteroffensive, which ended the struggle on November 11.

At the Paris Peace Conference Wilson fought stubbornly for the democratic settlement he had earlier outlined under Fourteen Points, but gained principally his proposal of a League of Nations, which he saw as a sort of continuing peace conference. At home the Republican-controlled Senate, whipping up isolationist sentiment, completed his rout, for when Wilson spurned efforts to amend the treaty, that body under the two-thirds requirement rejected it by a minority vote. The tide was turning from wartime idealism to what Warren G. Harding, overwhelmingly elected by the Republicans in 1920, called "normalcy." Disclosures of corruption in high government circles hastened Harding's death, elevating Calvin Coolidge, who renewed his presidency by election a year later and was followed in 1929 by Herbert Hoover. All three, while keeping out of the League, nevertheless cooperated with some of its minor activities and, on their own, concluded a number of collective treaties

for temporary naval disarmament and the outlawry of war.

These part-way steps were offset, however, by an upsurge of economic nationalism: a skyward trend of protective duties, a relaxing of controls over giant corporations, and a quota limitation on European immigration. "Rugged individualism" produced the dizziest prosperity the country had ever known, only to collapse in 1929 into the worst depression ever known. Hoover, striving vainly to repair the damage, met abject defeat in 1932 at the hands of the socially minded Franklin D. Roosevelt, who pledged a "new deal" by the Democrats. Under Roosevelt's thrilling leadership Congress, casting precedent to the winds, voted billions for relief, "primed the pump" of business and agriculture to hasten recovery, and inaugurated long-range reforms to increase foreign trade through reciprocal tariff reductions, reorganize banking practices, safeguard trade-union activities, guarantee minimum wages, destroy electrical holding companies, and provide for social insurance and a government-planned development of the Tennessee Valley.

7. World War Again

Toward Latin America Franklin Roosevelt adopted the "good neighbor" policy, relinquishing the Caribbean protectorates and transforming the Monroe Doctrine into a mutual nonaggression pact. As further evidence of the retreat from imperialism, Congress made provision for Philippine freedom in 1946. Relations with other parts of the world, however, posed increasing problems. As the Axis dictators and their Oriental partner, Japan, began over-running weaker peoples, Congress under isolationist influences directed Roosevelt, against his wish, to embargo munition sales to both victim and assailant; but public opinion forced a lifting of the ban after England and France in September, 1939, took up arms against Nazi aggression. Hitler's subjugation of France the following June emboldened Roosevelt to more active steps, for crippled England now alone defended the Atlantic from totalitarian domination. Congress at his behest voted vast sums for rearmament and adopted peacetime conscription, and Roosevelt, without consulting Congress, gave England fifty destroyers in exchange for a string of naval bases off North America.

Isolationists, mostly Republicans, denounced Roosevelt's "warmongering," while he, still clinging to measures "short of war," stressed insistently the gathering dangers to the American way of life—to freedom of speech, freedom of worship, freedom from want and freedom from fear. The people responded by choosing him in 1940 as their first third-term President. In March, 1941, he secured adoption of the

lend-lease plan and soon began using the navy to safeguard the supplies en route. Before matters reached a crisis, the Japanese war lords, irked by America's stiffening attitude toward their own conquests and gambling upon an Axis victory in Europe, treacherously attacked Pearl Harbor on December 7, clearing the way for the seizure of Guam, the Philippines and two of the Aleutians, as well as many Dutch and British holdings. Within four days Germany and Italy declared war against the United States.

America quickly girded herself for the mightiest struggle in history. Enlarging upon Wilson's wartime methods, the government completely reorganized the national economy for an unparalleled output of arms and food. By summer, sea, land and air forces were attacking the enemy all over the globe. In May, 1943, after bitter fighting, Anglo-American armies expelled the Axis from North Africa, then invaded southern Italy and forced the government's submission in September, though the Nazis there kept up the fight. Landing in Normandy in June, 1944, the Allies under Dwight D. Eisenhower's supreme command battered their way through France and across the Rhine, while the Russians pounded the Nazis from the east. On May 8, 1945, Germany unconditionally surrendered. The Pacific war was no less desperately contested; but the Allies, based on Australia, slowly won control of the sea and, pressing onward from island to island, hastened Japan's unconditional surrender on August 14, 1945, by loosing the atomic bomb and by Soviet Russia's last-minute entry into the conflict.

World War II was at an end, but what would be the nature of the peace? The Atlantic Charter, signed in August, 1941, by Roosevelt and Churchill and later agreed to by all the Allies, pledged them against "aggrandizement, territorial or other," but subsequent conferences by the major powers—at Cairo, Teheran, Yalta, Potsdam and elsewhere—foreshadowed a different outcome. Russia in particular demanded substantial territorial advantages. In July, 1946, the Allies gathered at Paris to draw up terms for Italy and the Axis satellites: Rumania, Bulgaria, Hungary and Finland. Germany and Japan, under armed occupation, were reserved for later handling.

Without waiting for final military victory fifty countries, at Roosevelt's urging and with bipartisan support in America, had set up a successor to the League: the peacetime United Nations. Roosevelt, elected a fourth time in 1944, died suddenly on April 12, 1945, several weeks too soon to assist in framing the charter at San Francisco; but his achievements in peace and war had already earned him a niche alongside America's greatest Presi-

dents: Washington, Jefferson, Jackson, Lincoln and Wilson.

His successor, Harry S. Truman, gained Congress's backing for measures implementing the international organization, such as the Bretton Woods agreements and the new World Court, but his proposals for domestic reconversion ran into stiff and usually successful opposition from a coalition of Northern Republicans and Southern Democrats. Legislation was

passed, however, for emergency housing of veterans, modified price control and a program of hospital construction. As climbing prices attended the quick relaxation of wartime controls, industrial unrest flared up throughout the land. The strikes usually concluded with higher wage scales negotiated by the government. When the year 1946 closed, there remained much unfinished business both at home and abroad.

The Continental Congresses

The First Continental Congress called by Massachusetts and Virginia in 1774 was attended by representatives of all the colonies except Georgia. Patrick Henry of Virginia declared, "The distinctions between Pennsylvanians, New Yorkers and New Englanders are no more. I am not a Virginian but an American." This Congress was in session only two months but passed inter-colonial resolutions calling for extensive boycott by the colonies against British trade.

The following year most of the delegates from the colonies were chosen by popular election to attend the Second Continental Congress which indicated the reality of the thirteen-colony alliance. The Congress assembled at Philadelphia on September 5, 1775, a few months after war had actually begun between the colonies and England. The Declaration of Independence, penned by Thomas Jefferson and signed by most of the delegates in 1776, came a year

after the first battle of the Revolutionary War at Lexington, April 19, 1775.

The Second Continental Congress recruited an army to resist the British and appointed George Washington as commander-in-chief. On July 4, 1776, the colonies declared their independence from the British and in the absence of unilateral organization, managed to unite the resistance of the colonies until the Articles of Confederation were signed in 1781. The Articles provided more for a league of the thirteen states rather than central government. Each state had certain powers and allowed like power in less degree to the federal government.

The United States was internationally recognized as an independent government when the Peace Treaty in 1783 recognized the United States as a nation bordered by Canada on the north, the Atlantic Ocean on the east, Spanish-owned Florida on the south and the Mississippi River on the west.

Presidents of the Continental Congresses

Name	Elected	Born	Died
Peyton Randolph, Va.	Sept. 5, 1774	1723	1775
Henry Middleton, S. C.	Oct. 22, 1774

Cyrus Griffin, Va.	Jan. 22, 1788	1748	1810

THE DECLARATION OF INDEPENDENCE IN CONGRESS, JULY 4, 1776

The unanimous DECLARATION of the thirteen united STATES OF AMERICA.

WHEN, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident that all men are created equal, that they are endowed, by their Creator, with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed, that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and institute new government, laying its foundation on such principles, and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established, should not be changed for light and transient causes; and accordingly all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of these Colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these States. To prove this, let facts be submitted to a candid world.

He has refused his assent to laws, the most wholesome and necessary for the public good.

He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and when so suspended, he has utterly neglected to attend to them.

He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature, a right inestimable to them, and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved representative houses repeatedly, for opposing with manly firmness his invasions on the rights of the people.

He has refused for a long time, after such dissolutions, to cause others to be elected, whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise; the State remaining, in the meantime, exposed to all the dangers of invasion from without, and convulsions within.

He has endeavored to prevent the population of these States; for that purpose obstructing the laws for naturalization of foreigners; refusing to pass others to encourage their migrations hither, and raising the conditions of new appropriations of lands.

He has obstructed the administration of justice by refusing his assent to laws for establishing judiciary powers.

He has made judges dependent on his will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of new offices, and sent hither swarms of officers to harass our people, and eat out their substance.

He has kept among us, in times of peace, standing armies, without the consent of our legislatures.

He has affected to render the military independent of and superior to the civil power.

He has combined with others to subject us to a jurisdiction foreign to our constitution and unacknowledged by our laws; giving his assent to their acts of pretended legislation:

For quartering large bodies of armed troops among us:

For protecting them, by a mock trial, from punishment for any murders which they should commit on the inhabitants of these States:

For cutting off our trade with all parts of the world:

For imposing taxes on us without our consent:

For depriving us, in many cases, of the benefits of trial by jury:

For transporting us beyond seas to be tried for pretended offenses:

For abolishing the free system of English laws in a neighboring province, establishing therein an arbitrary government, and enlarging its boundaries, so as to render it at once an example and fit instrument for introducing the same absolute rule into these colonies:

For taking away our charters, abolishing our most valuable laws, and altering fundamentally the forms of our governments:

For suspending our own legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated government here, by declaring us out of his protection, and waging war against us.

He has plundered our seas, ravaged our coasts, burnt our towns, and destroyed the lives of our people.

He is, at this time, transporting large armies of foreign mercenaries to complete the works of death, desolation, and tyranny, already begun, with circumstances of cruelty and perfidy, scarcely paralleled in the most barbarous ages, and totally unworthy the head of a civilized nation.

He has constrained our fellow citizens, taken captive on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands.

He has excited domestic insurrections amongst us, and has endeavored to bring on the inhabitants of our frontiers, the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes, and conditions.

In every stage of these oppressions we have petitioned for redress in the most humble terms: our repeated petitions have been answered only by repeated injury. A prince whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a free people.

Nor have we been wanting in attentions to our British brethren. We have warned them, from time to time, of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity which denounces our separation, and hold them, as we hold the rest of mankind, enemies in war, in peace friends.

WE, therefore, the Representatives of the United States of America, in General Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do in the name, and by authority of the good people of these Colonies, solemnly publish and declare, That these United Colonies, are, and of right ought to be, *free and independent States*; that they are absolved from all allegiance to the British crown, and that all political connexion between them and the State of Great Britain, is, and ought to be, totally dissolved; and that as *free and independent States*, they have full power to levy war, conclude

peace, contract alliances, establish commerce, and to do all other acts and things which *independent States* may of right do. And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honour.

IN CONGRESS

JANUARY, 18, 1777. }

Ordered:

That an authenticated copy of the Declaration of Independency, with the names of the Members of Congress subscribing the same, be sent to each of the United States, and that they be desired to have the same put on record.

By order of Congress.

Attest, CHAS. THOMSON,
Secy.

A true copy.
JOHN HANCOCK,
Presidt.

JOHN HANCOCK,
President.

As early as April 12, 1776, the legislature of North Carolina authorized its delegates to the Continental Congress to join with others in a declaration of separation from Great Britain; the first colony to instruct its delegates to take the actual initiative was Virginia on May 15.

On June 7, 1776, Richard Henry Lee of Virginia offered a resolution to the Continental Congress to the effect "that these United Colonies are, and of right, ought to be, free and independent States, that they are absolved from all allegiance to the British Crown, and that all political connection between them and the State of Great Britain is, and ought to be, totally dissolved." It was seconded by John Adams, and three days later a committee, including Thomas Jefferson, John Adams, Benjamin Franklin, Robert R. Livingston and Roger Sherman was organized to "pre-

pare a declaration to the effect of the said first resolution". This committee brought in its draft on June 28. Congress adopted the resolution previously submitted on July 2 by a vote of 12 states voting unanimously, Pennsylvania and Delaware divided and New York not voting until several days later.

The Declaration of Independence was adopted on July 4, 1776.

Most of the delegates signed the Declaration of Independence on August 2d but George Wythe (Va.) signed on August 27; Richard Henry Lee (Va.), Elbridge Gerry (Mass.) and Oliver Wolcott (Conn.) in September; Matthew Thornton (N. H.), not a delegate until September, in November; and Thomas McKean (Del.), although present on July 4, not until 1781 by special permission, having served in the army in the interim.

CONSTITUTION of the UNITED STATES OF AMERICA

THE oldest federal constitution in existence was framed by a convention of delegates from twelve of the thirteen original states in Philadelphia in May 1787, Rhode Island failing to send a delegate. George Washington presided over the session, which lasted until September 17, 1787. The draft (originally a preamble and seven Articles) was submitted to all thirteen states and was to become effective when ratified by nine states. It went into effect on the first Wednesday in March 1789, having been ratified by New Hampshire, the ninth state to approve, on June 21, 1788. The states ratified the Constitution in the following order:

Delaware	December 7, 1787	South Carolina	May 23, 1788
Pennsylvania	December 12, 1787	New Hampshire	June 21, 1788
New Jersey	December 18, 1787	Virginia	June 25, 1788
Georgia	January 2, 1788	New York	July 26, 1788
Connecticut	January 9, 1788	North Carolina	November 21, 1788
Massachusetts	February 6, 1788	Rhode Island	May 29, 1790
Maryland	April 28, 1788		

Outline of the Constitution

ARTICLE I

SEC. 1. Legislative powers; in whom vested.

SEC. 2. House of Representatives, how and by whom chosen—Qualifications of a Representative—Representatives and direct taxes, how apportioned—Enumeration—Vacancies to be filled—Power of choosing officers, and of impeachment.

SEC. 3. Senators, how and by whom chosen—How classified—State Executive, when to make temporary appointments, in case, etc.—Qualifications of a Senator—President of the Senate, his right to vote—President pro tem., and other officers of the Senate, how chosen—Power to try impeachments—When President is tried, Chief Justice to preside—Sentence.

SEC. 4. Times, etc., of holding elections, how prescribed—At least one Session in each year.

SEC. 5. Membership—Quorum—Adjournments—Rules—Power to punish or expel—Journal—Time of adjournments, how limited, etc.

SEC. 6. Compensation—Privileges—Disqualification in certain cases.

SEC. 7. House to originate all revenue bills—Veto—Bill may be passed by two-thirds of each house, notwithstanding, etc.—Bill, not returned in ten days, to become a law—Provisions as to orders, concurrent resolutions, etc.

SEC. 8. Powers of Congress.

SEC. 9. Provision as to migration or importation of certain persons—Habeas Corpus—Bills of attainder, etc.—Taxes, how apportioned—No export duty—No commercial preference—Money, how drawn from treasury, etc.—No titular nobility—Officers not to receive presents, etc.

SEC. 10. States prohibited from the exercise of certain powers.

ARTICLE II

SEC. 1. President; his term of office—Electors of President; number and how appointed—Electors to vote on same day—Qualification of President—On whom his duties devolve in case of his removal, death, etc.—President's compensation—His oath of office.

SEC. 2. President to be commander in chief—He may require opinions of Cabinet Officers, etc., may pardon—Treaty-making power—Nomination of certain officers—When President may fill vacancies.

SEC. 3. President shall communicate to Congress—He may convene and adjourn Congress, in case of disagreement, etc.—Shall receive ambassadors, execute laws, and commission officers.

SEC. 4. All civil offices forfeited for certain crimes.

ARTICLE III

SEC. 1. Judicial powers—Tenure—Compensation.

SEC. 2. Judicial power; to what cases it extends—Original jurisdiction of Supreme Court—Appellate—Trial by jury, etc.—Trial, where.

SEC. 3. Treason defined—Proof of—Punishment of.

ARTICLE IV

SEC. 1. Each State to give credit to the public acts, etc., of every other State.

SEC. 2. Privileges of citizens of each State—Fugitives from justice to be delivered up—Persons held to service having escaped, to be delivered up.

SEC. 3. Admission of new States—Power of Congress over territory and other property.

SEC. 4. Republican form of government guaranteed—Each State to be protected.

ARTICLE V

Constitution; how amended—Proviso.

ARTICLE VI

Certain debts, etc., declared valid—Supremacy of Constitution, treaties, and laws of the United States—Oath to support Constitution, by whom taken—No religious test.

ARTICLE VII

What ratification shall establish Constitution.

AMENDMENTS

XXI. Repeal of Prohibition.

The Constitution of the United States of America

PREAMBLE.—WE THE PEOPLE of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquillity, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.

ARTICLE I

Section 1

Legislative powers vested in Congress.—All legislative Powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

Section 2

Composition of the House of Representatives.—1. The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature.

Qualifications of Representatives.—2. No Person shall be a Representative who shall not have attained to the Age of twenty-five Years, and been seven Years a Citizen

of the United States, and who shall not, when elected, be an Inhabitant of that State in which he shall be chosen.

Apportionment of Representatives and direct taxes—census.*—3. [Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other persons.] The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, in such Manner as they shall by Law direct. The Number of Representatives shall not exceed one for every thirty Thousand, but each State shall have at Least one Representative; and until such enumeration shall be made, the State of New Hampshire shall be entitled to chuse three, Massachusetts eight, Rhode-Island and Providence Plantations one, Connecticut five, New York six, New Jersey four, Pennsylvania eight, Delaware one, Maryland six, Virginia ten, North Carolina five, South Carolina five, and Georgia three.

Filling of vacancies in representation.—4. When vacancies happen in the Representation from any State, the Executive Au-

*The clause included in brackets is amended by the fourteenth amendment, second section.

thority thereof shall issue Writs of Election to fill such Vacancies.

Selection of officers; power of impeachment.—5. The House of Representatives shall chuse their Speaker and other Officers; and shall have the sole Power of Impeachment.

Section 3*

The Senate.—[1. The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six Years; and each Senator shall have one Vote.]

Classification of Senators; filling of vacancies.—2. Immediately after they shall be assembled in Consequence of the first Election, they shall be divided as equally as may be into three Classes. The Seats of the Senators of the first Class shall be vacated at the expiration of the second Year, of the second Class at the Expiration of the fourth Year, and of the third Class at the Expiration of the sixth Year, so that one-third may be chosen every second Year; and if Vacancies happen by Resignation, or otherwise, during the Recess of the Legislature of any State, the Executive thereof may make temporary Appointments [until the next Meeting of the Legislature, which shall then fill such Vacancies.]

Qualification of Senators.—3. No Person shall be a Senator who shall not have attained to the Age of thirty Years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen.

Vice-President to be President of Senate.—4. The Vice-President of the United States shall be President of the Senate, but shall have no Vote, unless they be equally divided.

Selection of Senate officers; President pro tempore.—5. The Senate shall chuse their other Officers, and also a President pro tempore, in the absence of the Vice-President, or when he shall exercise the Office of President of the United States.

Senate to try impeachments.—6. The Senate shall have the sole Power to try all Impeachments. When sitting for that Purpose, they shall be on Oath or Affirmation. When the President of the United States is tried, the Chief Justice shall preside: And no Person shall be convicted without the Concurrence of two thirds of the Members present.

Judgment in cases of impeachment.—7. Judgment in Cases of Impeachment shall not extend further than to removal from Office, and disqualification to hold and en-

joy any Office of honor, Trust, or Profit under the United States: but the Party convicted shall nevertheless be liable and subject to Indictment, Trial, Judgment and Punishment, according to Law.

Section 4

Control of congressional elections.—1. The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations, except as to the Places of chusing Senators.

Time for assembling of Congress.†—2. The Congress shall assemble at least once in every Year, and such Meeting shall be on the first Monday in December, unless they shall by Law appoint a different Day.

Section 5

Each house to be the judge of the election and qualifications of its members; regulations as to quorum.—1. Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members, and a Majority of each shall constitute a Quorum to do Business; but a smaller Number may adjourn from day to day, and may be authorized to compel the Attendance of absent Members, in such Manner, and under such Penalties as each House may provide.

Each house to determine its own rules.—2. Each House may determine the Rules of its Proceedings, punish its Members for disorderly Behavior, and, with the Concurrence of two thirds, expel a Member.

Journals and yeas and nays.—3. Each House shall keep a Journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy; and the Yeas and Nays of the Members of either House on any question shall, at the Desire of one fifth of those Present, be entered on the Journal.

Adjournment.—4. Neither House, during the Session of Congress shall, without the Consent of the other, adjourn for more than three days, nor to any other Place than that in which the two Houses shall be sitting.

Section 6

Compensation and privileges of Members of Congress.—1. The Senators and Representatives shall receive a Compensation for their Services, to be ascertained by Law, and paid out of the Treasury of the United States. They shall in all Cases, except Treason, Felony and Breach of the

*The first paragraph of section three of article I of the Constitution of the United States, and so much of paragraph two of the same section as relates to filling vacancies, are amended by the seventeenth amendment to the Constitution.

†Amended by article XX, section 2, of the amendments to the Constitution.

Peace, be privileged from Arrest during their Attendance at the Session of their respective Houses, and in going to and returning from the same; and for any Speech or Debate in either House, they shall not be questioned in any other Place.

Incompatible offices; exclusions.—2. No Senator or Representative shall, during the Time for which he was elected, be appointed to any civil Office under the Authority of the United States, which shall have been created, or the Emoluments whereof shall have been increased during such time; and no Person holding any Office under the United States, shall be a Member of either House during his Continuance in Office.

Section 7

Revenue bills to originate in House.—1. All Bills for raising Revenue shall originate in the House of Representatives; but the Senate may propose or concur with Amendments as on other Bills.

Manner of passing bills; veto power of President.—2. Every Bill which shall have passed the House of Representatives and the Senate, shall, before it becomes a Law, be presented to the President of the United States; If he approve he shall sign it, but if not he shall return it, with his Objections to that House in which it shall have originated, who shall enter the Objections at large on their Journal, and proceed to reconsider it. If after such Reconsideration two thirds of that House shall agree to pass the Bill, it shall be sent, together with the Objections, to the other House, by which it shall likewise be reconsidered, and if approved by two thirds of that House, it shall become a Law. But in all such Cases the Votes of both Houses shall be determined by Yeas and Nays, and the Names of the Persons voting for and against the Bill shall be entered on the Journal of each House respectively. If any Bill shall not be returned by the President within ten Days (Sundays excepted) after it shall have been presented to him, the Same shall be a Law, in like Manner as if he had signed it, unless the Congress by their Adjournment prevent its Return, in which Case it shall not be a Law.

Concurrent orders or resolutions, to be passed by President.—3. Every Order, Resolution, or Vote to which the Concurrence of the Senate and House of Representatives may be necessary (except on a question of adjournment) shall be presented to the President of the United States; and before the Same shall take Effect, shall be approved by him, or being disapproved by him, shall be repassed by two thirds of the Senate and House of Representatives, according to the Rules and Limitations prescribed in the Case of a Bill.

Section 8

General powers of Congress.*

The Congress shall have Power.—1. To lay and collect Taxes, Duties, Imports and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States; but all Duties, Imports and Excises shall be uniform throughout the United States.

Borrowing of money.—2. To borrow money on the credit of the United States.

Regulation of commerce.—3. To regulate Commerce with foreign Nations, and among the several States, and with the Indian tribes.

Naturalization and bankruptcy.—4. To establish a uniform Rule of Naturalization, and uniform Laws on the subject of Bankruptcies throughout the United States.

Money, weights and measures.—5. To coin Money, regulate the Value thereof, and of foreign Coin, and fix the Standard of Weights and Measures.

Counterfeiting.—6. To provide for the Punishment of counterfeiting and Securities and current Coin of the United States.

Post offices.—7. To establish Post Offices and post Roads.

Patents and copyrights.—8. To promote the Progress of Science and useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries.

Inferior courts.—9. To constitute Tribunals inferior to the supreme Court.

Piracies and felonies.—10. To define and punish Piracies and Felonies committed on the high Seas, and Offenses against the Law of Nations.

War; marque and reprisal.—11. To declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water.

Armies.—12. To raise and support Armies, but no Appropriation of Money to that Use shall be for a longer Term than two Years.

Navy.—13. To provide and maintain a Navy.

Land and naval forces.—14. To make Rules for the Government and Regulation of the land and naval Forces.

Calling out militia.—15. To provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions.

Organizing, arming and disciplining militia.—16. To provide for organizing, arming, and disciplining the Militia, and for governing such Part of them as may be

*By article XVI of the amendments to the Constitution, Congress is given the power to lay and collect taxes on incomes.

employed in the Service of the United States, reserving to the States, respectively, the Appointment of the Officers, and the Authority of training the Militia according to the discipline prescribed by Congress.

Exclusive legislation over District of Columbia.—17. To exercise exclusive Legislation in all Cases whatsoever, over such District (not exceeding ten Miles square) as may, by Cession of particular States, and the acceptance of Congress, become the Seat of the Government of the United States, and to exercise like Authority over all Places purchased by the Consent of the Legislature of the State in which the Same shall be, for the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful Buildings;—and

To enact laws necessary to enforce Constitution.—18. To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof.

Section 9

Migration or importation of certain persons not to be prohibited before 1808.—1. The Migration or Importation of such Persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the Year one thousand eight hundred and eight, but a tax or duty may be imposed on such Importation, not exceeding ten dollars for each Person.

Writ of habeas corpus not to be suspended; exception.—2. The privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it.

Bills of attainder and ex post facto laws prohibited.—3. No Bill of Attainder or ex post facto Law shall be passed.

Capitation and other direct taxes.—4. No Capitation, or other direct, Tax shall be laid, unless in Proportion to the Census or Enumeration herein before directed to be taken.*

Exports not to be taxed.—5. No Tax or Duty shall be laid on Articles exported from any State.

No preference to be given to ports of any State; interstate shipping.—6. No Preference shall be given by any Regulation of Commerce or Revenue to the Ports of one State over those of another: nor shall Vessels bound to, or from, one State, be obliged to enter, clear, or pay Duties in another.

Money, how drawn from treasury; financial statements to be published.—7. No Money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law; and a regular Statement and Account of the Receipts and Expenditures of all public Money shall be published from time to time.

Titles of nobility not to be granted; acceptance by government officers of favors from foreign powers.—8. No Title of Nobility shall be granted by the United States: And no Person holding any Office of Profit or Trust under them, shall, without the Consent of the Congress, accept of any present, Emolument, Office, or Title, of any kind whatever, from any King, Prince, or foreign State.

Section 10

Limitations of the powers of the several States.—1. No State shall enter into any Treaty, Alliance, or Confederation; grant Letters of Marque and Reprisal; coin Money; emit Bills of Credit; make any Thing but gold and silver Coin a Tender in Payment of Debts; pass any Bill of Attainder, ex post facto Law, or Law impairing the Obligation of Contracts or grant any Title of Nobility.

State imposts and duties.—2. No State shall, without the Consent of the Congress, lay any Imposts or Duties on Imports or Exports, except what may be absolutely necessary for executing its inspection Laws: and the net Produce of all Duties and Imposts, laid by any State on Imports or Exports, shall be for the Use of the Treasury of the United States; and all such Laws shall be subject to the Revision and Control of the Congress.

Further restrictions on powers of States.—3. No State shall, without the consent of Congress, lay any duty of Tonnage, keep Troops, or Ships of War in time of Peace, enter into any Agreement or Compact with another State, or with a foreign Power, or engage in War, unless actually invaded, or in such imminent Danger as will not admit of delay.

ARTICLE II

Section 1

The President; the executive power.—1. The executive Power shall be vested in a President of the United States of America. He shall hold his Office during the Term of four Years, and, together with the Vice-President, chosen for the same Term, be elected, as follows:

Appointment and qualifications of presidential electors.—2. Each State shall appoint, in such Manner as the Legislature thereof may direct, a Number of Electors,

*See sixteenth amendment.

equal to the whole Number of Senators and Representatives to which the State may be entitled in the Congress: but no Senator or Representative, or Person holding an Office of Trust or Profit under the United States, shall be appointed an Elector.

Original method of electing the President and Vice-President.*—[The Electors shall meet in their respective States, and vote by Ballot for two persons, of whom one at least shall not be an Inhabitant of the same State with themselves. And they shall make a List of all the Persons voted for, and of the Number of Votes for each; which List they shall sign and certify, and transmit sealed to the Seat of the Government of the United States, directed to the President of the Senate. The President of the Senate shall, in the Presence of the Senate and House of Representatives, open all the Certificates, and the Votes shall then be counted. The Person having the greatest Number of Votes shall be the President, if such Number be a Majority of the whole Number of Electors appointed; and if there be more than one who have such Majority, and have an equal Number of Votes, then the House of Representatives shall immediately chuse by Ballot one of them for President; and if no Person have a Majority, then from the five highest on the list the said House shall in like Manner chuse the President. But in chusing the President, the Votes shall be taken by States, the Representation from each State having one Vote; A quorum for this Purpose shall consist of a Member or Members from two-thirds of the States, and a Majority of all the States shall be necessary to a Choice. In every Case, after the Choice of the President, the Person having the greatest Number of Votes of the Electors shall be the Vice-President. But if there should remain two or more who have equal Votes, the Senate should chuse from them by Ballot the Vice-President.]

Congress may determine time of choosing electors and day for casting their votes.—

3. The Congress may determine the Time of chusing the Electors, and the Day on which they shall give their Votes; which Day shall be the same throughout the United States.

Qualifications for the office of President.†

—4. No person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty-five Years, and been fourteen Years a Resident within the United States.

Filling vacancy in the office of President.‡—5. In Case of the Removal of the President from Office, or of his Death, Resignation, or Inability to discharge the Powers and Duties of the said Office, the same shall devolve on the Vice-President, and the Congress may by Law provide for the Case of Removal, Death, Resignation or Inability, both of the President and Vice-President, declaring what Officer shall then act as President, and such Officer shall act accordingly, until the Disability be removed, or a President shall be elected.

Compensation of the President.—6. The President shall, at stated Times, receive for his Services, a Compensation, which shall neither be increased nor diminished during the Period for which he shall have been elected, and he shall not receive within that Period any other Emolument from the United States, or any of them.

Oath to be taken by the President.—7. Before he enter on the Execution of his Office, he shall take the following Oath or Affirmation:—"I do solemnly swear (or affirm) that I will faithfully execute the Office of President of the United States, and will to the best of my Ability, preserve, protect and defend the Constitution of the United States."

Section 2

The President to be commander-in-chief of army and navy and head of executive departments; may grant reprieves and pardons.—1. The President shall be Commander-in-Chief of the Army and Navy of the United States, and of the Militia of the several States, when called into the actual Service of the United States; he may require the Opinion, in writing, of the principal Officer in each of the executive Departments, upon any subject relating to the Duties of their respective Offices, and he shall have Power to grant Reprieves and Pardons for Offenses against the United States, except in Cases of Impeachment.

President may, with concurrence of Senate, make treaties, appoint ambassadors, etc.; appointment of inferior officers, authority of Congress over.—2. He shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two-thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law; but the Congress may by Law vest the Appoint-

*This clause has been superseded by the twelfth amendment.

†For qualifications of the Vice President, see article XII of the amendments.

‡Amended by article XX, sections 3, and 4, of the amendments to the Constitution.

ment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments.

President may fill vacancies in office during recess of Senate.—3. The President shall have Power to fill up all Vacancies that may happen during the Recess of the Senate, by granting Commissions which shall expire at the End of their next Session.

Section 3

President to give advice to Congress; may convene or adjourn it on certain occasions; to receive ambassadors, etc.; have laws executed and commission all officers.—He shall from time to time give to the Congress Information of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient; he may, on extraordinary Occasions, convene both Houses, or either of them, and in Case of Disagreement between them, with Respect to the Time of Adjournment, he may adjourn them to such Time as he shall think proper; he shall receive Ambassadors and other public Ministers; he shall take Care that the Laws be faithfully executed, and shall Commission all the Officers of the United States.

Section 4

All civil officers removable by impeachment.—1. The President, Vice-President and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.

ARTICLE III

Section 1

Judicial power; how vested; term of office and compensation of judges.—The judicial Power of the United States, shall be vested in one supreme Court, and in such inferior Courts as the Congress may from time to time ordain and establish. The Judges, both of the supreme and inferior Courts, shall hold their Offices during good Behavior, and shall, at stated Times, receive for their Services a Compensation which shall not be diminished during their Continuance in Office.

Section 2

Jurisdiction of Federal courts.*—1. The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority;—to all Cases affecting Ambassadors, other public Ministers and Consuls;—to all Cases of Admiralty and maritime Jurisdiction;—to Controversies to which the United States shall

be a Party;—to Controversies between two or more States;—between a State and Citizens of another State;—between Citizens of different States;—between Citizens of the same State claiming Lands under Grants of different States, and between a State, or the Citizens thereof, and foreign States, Citizens or Subjects.

Original and appellate jurisdiction of Supreme Court.—2. In all Cases affecting Ambassadors, other public Ministers and Consuls, and those in which a State shall be Party, the supreme Court shall have original Jurisdiction. In all the other Cases before mentioned, the supreme Court shall have appellate Jurisdiction, both as to Law and Fact, with such Exceptions, and under such Regulations as the Congress shall make.

Trial of all crimes, except impeachment, to be by jury.—3. The trial of all Crimes, except in Cases of Impeachment, shall be by Jury; and such Trial shall be held in the State where the said Crimes shall have been committed; but when not committed within any State, the trial shall be at such Place or Places as the Congress may by Law have directed.

Section 3

Treason defined; conviction of.—1. Treason against the United States, shall consist only in levying War against them, or, in adhering to their Enemies, giving them Aid and Comfort. No Person shall be convicted of Treason unless on the Testimony of two Witnesses to the same overt Act, or on Confession in open Court.

Congress to declare punishment for treason; proviso.—2. The Congress shall have power to declare the Punishment of Treason, but no Attainder of Treason shall work Corruption of Blood, or Forfeiture except during the Life of the Person attainted.

ARTICLE IV

Section 1

Each State to give full faith and credit to the public acts and records of other States.—Full Faith and Credit shall be given in each State to the public Acts, Records, and judicial Proceedings of every other State. And the Congress may by general Laws prescribe the Manner in which such Acts, Records and Proceedings shall be proved, and the Effect thereof.

Section 2

Privileges of citizens.—1. The Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States.

Extradition between the several States.—2. A Person charged in any State with Treason, Felony, or other Crime, who shall

*This section is abridged by article XI of the amendments.

flee from Justice, and be found in another State, shall on demand of the executive Authority of the State from which he fled, be delivered up, to be removed to the State having Jurisdiction of the Crime.

Persons held to labor or service in one State, fleeing to another, to be returned.*—3. No Person held to Service or Labour in one State, under the Laws thereof, escaping into another, shall, in Consequence of any Law or Regulation therein, be discharged from such Service or Labour, but shall be delivered up on Claim of the Party to whom such Service or Labour may be due.

Section 3

New States.—1. New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the Jurisdiction of any other State; nor any State be formed by the Junction of two or more States, or parts of States, without the Consent of the Legislatures of the States concerned as well as of the Congress.

Regulations concerning territory.—2. The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to Prejudice any Claims of the United States, or of any particular State.

Section 4

Republican form of government and protection guaranteed the several States.—The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion; and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence.

ARTICLE V

Ways in which the Constitution can be amended.—The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose Amendments to this Constitution, or, on the Application of the Legislatures of two-thirds of the several States, shall call a Convention for proposing Amendments, which, in either Case, shall be valid to all Intents and Purposes, as part of this Constitution, when ratified by the Legislatures of three-fourths of the several States, or by Conventions in three-fourths thereof, as the one or the other Mode of Ratification may be proposed by the Congress; Provided that no Amendment which may be made prior to the Year One thousand eight hundred and eight shall in any Manner affect the first and

fourth Clauses in the Ninth Section of the first Article; and that no State, without its Consent, shall be deprived of its equal Suffrage in the Senate.

ARTICLE VI

Debts contracted under the confederation secured.—1. All Debts contracted and Engagements entered into, before the Adoption of this Constitution, shall be as valid against the United States under this Constitution, as under the Confederation.

Constitution, laws and treaties of the United States to be supreme.—2. This Constitution, and the Laws of the United States shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding.

Who shall take constitutional oath; no religious test as to official qualification.—3. The Senators and Representatives before mentioned, and the Members of the several State Legislatures, and all executive and judicial Officers, both of the United States and of the several States, shall be bound by Oath or Affirmation, to support this Constitution; but no religious Test shall ever be required as a Qualification to any Office or public Trust under the United States.

ARTICLE VII

Constitution to be considered adopted when ratified by nine States.—The Ratification of the Conventions of nine States shall be sufficient for the Establishment of this Constitution between the States so ratifying the Same.

Done in Convention by the Unanimous Consent of the States present the Seventeenth Day of September in the Year of our Lord one thousand seven hundred and Eighty seven and of the Independence of the United States of America the Twelfth. In Witness whereof We have hereunto subscribed our Names.

AMENDMENTS TO THE CONSTITUTION OF THE UNITED STATES

[The following amendments from Articles I to X inclusive were proposed at the first session of the first Congress which convened in New York City on March 4, 1789, and were adopted as follows: New Jersey, Nov. 20, 1789; Maryland, Dec. 19, 1789; North Carolina, Dec. 22, 1789; South Carolina, Jan. 19, 1790; New Hampshire, Jan. 25, 1790; Delaware, Jan. 28, 1790; Pennsylvania, March 10, 1790; New York, March 27, 1790; Rhode Island, June 15, 1790; Vermont, Nov. 3, 1791; and Virginia, Dec. 15, 1791.]

ARTICLE I

Freedom of religion, speech, of the press, and right of petition.—Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

ARTICLE II

Right of people to bear arms not to be infringed.—A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed.

ARTICLE III

Quartering of troops.—No Soldier shall, in time of peace be quartered in any house, without the consent of the Owner, nor in time of war, but in a manner to be prescribed by law.

ARTICLE IV

Persons and houses to be secure from unreasonable searches and seizures.—The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

ARTICLE V

Trials for crimes; just compensation for private property taken for public use.—No person shall be held to answer for a capi-

tal, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

ARTICLE VI

Civil rights in trials for crimes enumerated.—In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the Assistance of Counsel for his defence.

ARTICLE VII

Civil rights in civil suits.—In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise re-examined in any Court of the United States, than according to the rules of the common law.

ARTICLE VIII

Excessive bail, fines and punishments prohibited.—Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

ARTICLE IX

Reserved rights of people.—The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

ARTICLE X

Powers not delegated, reserved to states and people respectively.—The powers not

delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

[The Eleventh Amendment was proposed to the several states by the Third Congress on March 5, 1794, and declared effective January 8, 1798.]

ARTICLE XI

Judicial power of United States not to extend to suits against a State.—The Judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by Citizens of another State, or by Citizens or Subjects of any Foreign State.

[The Twelfth Amendment was submitted to the legislatures of the states by the Eighth Congress on December 12, 1803, and became part of the Constitution September 25, 1804.]

ARTICLE XII

Present mode of electing President and Vice-President by electors.*—The Electors shall meet in their respective states and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate;—The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted;—The person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by states, the representation from each State having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. And if the House of Representatives shall not choose a President whenever the right of choice shall devolve upon them, before the fourth day of

March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President. The person having the greatest number of votes as Vice-President, shall be the Vice-President, if such number be a majority of the whole number of electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

[The Thirteenth Amendment was offered to the several states by the Thirty-eighth Congress on February 1, 1865, and declared in force December 18, 1865.]

ARTICLE XIII

Section 1

Slavery prohibited.—Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

Section 2

Congress given power to enforce this article.—Congress shall have power to enforce this article by appropriate legislation.

[The Fourteenth Amendment was proposed to the legislature by the Thirty-ninth Congress on June 16, 1866 and was approved July 28, 1868.]

ARTICLE XIV

Section 1

Citizenship defined; privileges of citizens.—All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2

Apportionment of Representatives.—Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding

*Amended by article XX, sections 3 and 4, of the amendments to the Constitution.

Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the Executive and Judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

Section 3

Disqualification for office; removal of disability.—No person shall be a Senator or Representative in Congress, or elector of President and Vice-President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may by a vote of two-thirds of each House, remove such disability.

Section 4

Public debt not to be questioned; payment of debts and claims incurred in aid of rebellion forbidden.—The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void.

Section 5

Congress given power to enforce this article.—The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

[The Fifteenth Amendment was submitted to the State Legislatures by the Fortieth Congress on February 27, 1869, and declared in force March 30, 1870.]

ARTICLE XV

Section 1

Right of certain citizens to vote established.—The right of citizens of the United

States to vote shall not be denied or abridged by the United States or by any State, on account of race, color, or previous condition of servitude.

Section 2

Congress given power to enforce this article.—The Congress shall have power to enforce this article by appropriate legislation.

[The Sixteenth Amendment was proposed to the States by the Sixty-first Congress on July 12, 1909, and became effective February 25, 1913.]

ARTICLE XVI

Taxes on income; Congress given power to lay and collect.—The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

[The Sixty-second Congress proposed the Seventeenth Amendment on May 16, 1912, and it became a part of the Constitution on May 31, 1913.]

ARTICLE XVII

Election of United States Senators; filling of vacancies; qualifications of electors.

1. The Senate of the United States shall be composed of two Senators from each State, elected by the people thereof, for six years; and each Senator shall have one vote. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislatures.

2. When vacancies happen in the representation of any State in the Senate, the executive authority of such State shall issue writs of election to fill such vacancies: Provided, that the legislature of any State may empower the executive thereof to make temporary appointment until the people fill the vacancies by election as the legislature may direct.

3. This amendment shall not be so construed as to affect the election or term of any Senator chosen before it becomes valid as part of the Constitution.

[The Eighteenth or Dry Law Amendment was submitted to the legislatures of the several states by the Sixty-fifth Congress and on January 20, 1919, it was announced the amendment would be in full force on January 16, 1920.]

ARTICLE XVIII*

Manufacture, sale or transportation of intoxicating liquors, for beverage purposes, prohibited.—1. After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof

*Repealed by article XXI, effective December 5, 1933.

into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.

Congress and the several States given concurrent power to pass appropriate legislation to enforce this article.—2. The Congress and the several States shall have concurrent power to enforce this article by appropriate legislation.

Provisions of article to become operative, when adopted by three-fourths of the States.—3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several States, as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

[The Nineteenth or Equal Suffrage Amendment was proposed to the states by the Sixty-sixth Congress on May 19, 1919, and ratified on August 26, 1920.]

ARTICLE XIX

The right of citizens to vote shall not be denied because of sex.—The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

Congress shall have power to enforce this article by appropriate legislation.

[The Twentieth or "Lame Duck" Amendment was proposed to the legislatures by the Seventy-second Congress on March 3, 1932, and ratified by the thirty-sixth state on January 23, 1933. Sections 1 and 2 became effective October 15, 1933.]

ARTICLE XX

Section 1

Terms of President, Vice-President, Senators and Representatives.—The terms of the President and Vice-President shall end at noon on the 20th day of January, and the terms of Senators and Representatives at noon on the 3d day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

Section 2

Time of assembling Congress.—The Congress shall assemble at least once in every year, and such meeting shall begin at noon on the 3d day of January, unless they shall by law appoint a different day.

Section 3

Filling vacancy in office of President.—If, at the time fixed for the beginning of the term of the President, the President elect shall have died, the Vice-President elect shall become President. If a President shall not have been chosen before

the time fixed for the beginning of his term, or if the President elect shall have failed to qualify, then the Vice-President elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein neither a President elect nor a Vice-President elect shall have qualified, declaring who shall then act as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President or Vice-President shall have qualified.

Section 4

Power of Congress in Presidential succession.—The Congress may by law provide for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice shall have devolved upon them, and for the case of the death of any of the persons from whom the Senate may choose a Vice-President whenever the right of choice shall have devolved upon them.

Section 5

Time of taking effect.—Sections 1 and 2 shall take effect on the 15th day of October following the ratification of this article.

Section 6

Ratification.—This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission.

[The Twenty-first Amendment, repealing prohibition, was proposed by the second session of the Seventy-second Congress on February 20, 1933, and became effective with ratification by Utah, the thirty-sixth state to ratify, on December 5, 1933.]

ARTICLE XXI

Section 1

Repeal of Prohibition Amendment.—The eighteenth article of amendment to the Constitution of the United States is hereby repealed.

Section 2

Transportation of intoxicating liquors.—The transportation or importation into any State, Territory, or possession of the United States for delivery or use therein of intoxicating liquors, in violation of the laws thereof, is hereby prohibited.

Section 3

Ratification.—This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by conventions in the several States, as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

The Mayflower Compact

On September 6, 1620, the *Mayflower*, a sailing vessel of about 180 tons, started her memorable voyage from Plymouth, England with 100 or 102* pilgrims aboard, bound for Virginia to establish a private permanent colony in North America. Arriving at Provincetown, Mass., on November 11 (November 21, new style calendar),

forty-two of the passengers signed the famous "Mayflower Compact" as the boat lay at anchor in that Cape Cod Harbor. A small detail of the Pilgrims, led by William Bradford, assigned to select a place for permanent settlement landed at what is now Plymouth, Mass., on December 21, n.s.

The text of the compact follows:

IN THE NAME OF GOD, Amen. We, whose names are underwritten, the Loyal Subjects of our dread Sovereign Lord, King James, by the Grace of God, of *Great Britain, France and Ireland, King, Defender of the Faith, &*,

Having undertaken for the Glory of God, and Advancement of the Christian Faith, and the Honour of our King and Country, a voyage to plant the first colony in the northern Parts of Virginia; do by these Presents, solemnly and mutually in the Presence of God and one of another, covenant and combine ourselves together into a civil Body Politick, for our better Ordering and Preservation, and Furtherance of the Ends aforesaid; And by Virtue hereof to enact, constitute, and frame, such just and equal Laws, Ordinances, Acts, Constitutions and Offices, from time to time, as shall be thought most meet and convenient for the General good of the Colony; unto which we promise all due Submission and Obedience.

In WITNESS whereof we have hereunto subscribed our names at *Cape Cod* the eleventh of *November*, in the Reign of our Sovereign Lord, King *James of England, France and Ireland*, the eighteenth, and of *Scotland* the fifty-fourth. *Anno Domini*, 1620

Lincoln's Gettysburg Address

The Battle of Gettysburg, one of the most noted battles of the Civil War, was fought on July 1, 2, and 3, 1863. On November 19, 1863, the field was dedicated as a national cemetery by President Lincoln in a two-minute speech that was to become immortal. At the time of its de-

livery the speech was relegated to the inside pages of the papers, while a two-hour address by Edward Everett, the leading orator of the time, caught the headlines.

The following is the text of the address revised by President Lincoln from his own notes:

FOURSCORE and seven years ago our fathers brought forth on this continent a new nation conceived in liberty and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this. But, in a larger sense, we cannot dedicate, we cannot consecrate, we cannot hallow this ground. The brave men, living and dead, who struggled here have consecrated it far above our poor power to add or detract. The world will little note nor long remember what we say here, but it can never forget what they did here. It is for us the living rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain, that this nation under God shall have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth.

*Historians differ as to whether 100, 101, or 102 passengers were aboard.

History of The Flag

Source: Encyclopaedia Britannica.

The first official American flag, known as the Grand Union Flag of the Continental Congress, was displayed on Prospect Hill in the American lines besieging Boston on January 1, 1776. It had thirteen red and white stripes, with the red cross of St. George superimposed on the white cross of St. Andrew upon a blue field in the upper right corner. On June 14, 1777, almost a year after the Declaration of Independence, the Continental Congress adopted the design which supplanted the last vestige of British influence in the flag. It was resolved that "The flag of the United States shall be thirteen stripes, alternate red and white, with a union of thirteen stars of white on a blue field, representing a new constellation." Although the thirteen stars were usually arranged in a circle, many other arrangements were evolved. No change in the design or number of stars was made until January 13, 1794, when Congress voted to add two stars and two stripes on the admission of Vermont and Kentucky to the union. In 1818, there were twenty states in the union with prospects of more to join. On April 18, 1818, Congress voted to perpetuate the original thirteen states by fixing the number of stripes as seven red and six alternate white stripes, with the number of stars in the blue field to correspond with the number of states in the union. Arizona and New Mexico added the last two of the present forty-eight stars to the flag on the date of their admission to the union on July 4, 1912.

During the Civil War, the Confederate Congress in session at Richmond, Va., in 1863, approved the design of a white flag, twice the length of the width and the field a red square two-thirds the width of the flag, containing a blue St. Andrew's Cross separated by a white fillet, and adorned with white stars to the number of the Confederate States. Later in 1865, a broad transverse strip of red was added to the white portion of the flag.

It has not been definitely proven that Betsy Ross designed and made the first American flag of stripes and stars. The first public statement was made by William J. Canby, grandson of Betsy Ross, on March 14, 1870, before the Historical Society of Pennsylvania. Mr. Canby, on later investigation, found no official document by Congress concerning the thirteen-striped, thirteen-starred flag before June 14, 1777. The story that George Washington, Robert Morris and George Ross as representatives from Congress visited Betsy Ross in June, 1776, with a request to design the flag is of general knowledge. There is no record of the adoption of any flag design by Congress prior to June 1777. The only record pertaining to Betsy Ross is in Harrisburg, Pa., in the form of a voucher dated May 29, 1777 for fourteen pounds and some shillings for flags she made for the Pennsylvania navy.

The present laws governing the display of the flag were not confirmed by Congress until June 22, 1942.

Flag Etiquette

(Public Law 829—77th Congress)

(Chapter 806—2d Session)

(H. J. Res. 359)

JOINT RESOLUTION

To amend Public Law Numbered 623, approved June 22, 1942, entitled "Joint resolution to codify and emphasize existing rules and customs pertaining to the display and use of the flag of the United States of America."

Resolved by the Senate and House of Representatives of the United States of America in Congress Assembled, That Public Law Numbered 623, approved June 22, 1942, entitled "Joint resolution to codify and emphasize existing rules and customs pertaining to the display and use of the flag of the United States of America," be, and the same is hereby amended to read as follows:

That the following codification of existing rules and customs pertaining to the display and use of the flag of the United States of America be, and it is hereby, established for the use of such civilians or

civilian groups or organizations as may not be required to conform with regulations promulgated by one or more executive departments of the Government of the United States.

SEC. 2. (a) It is the universal custom to display the flag only from sunrise to sunset on buildings and on stationary flag-staffs in the open. However, the flag may be displayed at night upon special occasions when it is desired to produce a patriotic effect.

(b) The flag should be hoisted briskly and lowered ceremoniously.

(c) The flag should not be displayed on days when the weather is inclement.

(d) The flag should be displayed on all days when the weather permits, especially on New Year's Day, January 1; Inauguration Day, January 20; Lincoln's Birthday, February 12; Washington's Birthday, Feb-

February 22; Army Day, April 6; Easter Sunday (variable); Mother's Day, second Sunday in May; Memorial Day (half-staff until noon), May 30; Flag Day, June 14; Independence Day, July 4; Labor Day, first Monday in September; Constitution Day, September 17; Columbus Day, October 12; Navy Day, October 27; Armistice Day, November 11; Thanksgiving Day, fourth Thursday in November; Christmas Day, December 25; such other days as may be proclaimed by the President of the United States; the birthdays of States (dates of admission); and on State holidays.

(e) The flag should be displayed daily, weather permitting, on or near the main administration building of every public institution.

(f) The flag should be displayed in or near every polling place on election days.

(g) The flag should be displayed during school days in or near every schoolhouse.

SEC. 3. That the flag, when carried in a procession with another flag or flags, should be either on the marching right; that is, the flag's own right, or, if there is a line of other flags, in front of the center of that line.

(a) The flag should not be displayed on a float in a parade except from a staff, or as provided in subsection (i).

(b) The flag should not be draped over the hood, top, sides, or back of a vehicle or of a railroad train or a boat. When the flag is displayed on a motorcar, the staff shall be fixed firmly to the chassis or clamped to the radiator cap.

(c) No other flag or pennant should be placed above or, if on the same level, to the right of the flag of the United States of America, except during church services conducted by naval chaplains at sea, when the church pennant may be flown above the flag during church services for the personnel of the Navy.

(d) The flag of the United States of America, when it is displayed with another flag against a wall from crossed staffs, should be on the right, the flag's own right, and its staff should be in front of the staff of the other flag.

(e) The flag of the United States of America should be at the center and at the highest point of the group when a number of flags of States or localities or pennants of societies are grouped and displayed from staffs.

(f) When flags of States, cities, or localities, or pennants of societies are flown on the same halyard with the flag of the United States, the latter should always be at the peak. When the flags are flown from adjacent staffs, the flag of the United States should be hoisted first and lowered last. No such flag or pennant may be placed above the flag of the United States or to the right of the flag of the United States.

(g) When flags of two or more nations

are displayed, they are to be flown from separate staffs of the same height. The flags should be of approximately equal size. International usage forbids the display of the flag of one nation above that of another nation in time of peace.

(h) When the flag of the United States is displayed from a staff projecting horizontally or at an angle from the window sill, balcony, or front of a building, the union of the flag should be placed at the peak of the staff unless the flag is at half-staff. When the flag is suspended over a sidewalk from a rope extending from a house to a pole at the edge of the sidewalk, the flag should be hoisted out, union first, from the building.

(i) When the flag is displayed otherwise than by being flown from a staff, it should be displayed flat, whether indoors or out, or so suspended that its folds fall as free as though the flag were staffed.

(j) When the flag is displayed over the middle of the street, it should be suspended vertically with the union to the north in an east and west street or to the east in a north and south street.

(k) When used on a speaker's platform, the flag, if displayed flat, should be displayed above and behind the speaker. When displayed from a staff in a church or public auditorium, if it is displayed in the chancel of a church, or on the speaker's platform in a public auditorium, the flag should occupy the position of honor and be placed at the clergyman's or speaker's right as he faces the congregation or audience. Any other flag so displayed in the chancel or on the platform should be placed at the clergyman's or speaker's left as he faces the congregation or audience. But when the flag is displayed from a staff in a church or public auditorium elsewhere than in the chancel or on the platform it shall be placed in the position of honor at the right of the congregation or audience as they face the chancel or platform. Any other flag so displayed should be placed on the left of the congregation or audience as they face the chancel or platform.

(l) The flag should form a distinctive feature of the ceremony of unveiling a statue or monument, but it should never be used as the covering for the statue or monument.

(m) The flag, when flown at half-staff, should be first hoisted to the peak for an instant and then lowered to the half-staff position. The flag should be again raised to the peak before it is lowered for the day. By "half-staff" is meant lowering the flag to one-half the distance between the top and bottom of the staff. Crepe streamers may be affixed to spearheads or flag-staffs in a parade only by order of the President of the United States.

(n) When the flag is used to cover a casket, it should be so placed that the union is at the head and over the left

shoulder. The flag should not be lowered into the grave or allowed to touch the ground.

Sec. 4. That no disrespect should be shown to the flag of the United States of America, the flag should not be dipped to any person or thing. Regimental colors, State flags, and organization or institutional flags are to be dipped as a mark of honor.

(a) The flag should never be displayed with the union down save as a signal of dire distress.

(b) The flag should never touch anything beneath it, such as the ground, the floor, water, or merchandise.

(c) The flag should never be carried flat or horizontally, but always aloft and free.

(d) The flag should never be used as drapery of any sort whatsoever, never fastened, drawn back, nor up, in folds, but always allowed to fall free. Bunting of blue, white, and red, always arranged with the blue above, the white in the middle, and the red below, should be used for covering a speaker's desk, draping the front of a platform, and for decoration in general.

(e) The flag should never be fastened, displayed, used, or stored in such a manner as will permit it to be easily torn, soiled, or damaged in any way.

(f) The flag should never be used as a covering for a ceiling.

(g) The flag should never have placed upon it, nor on any part of it, nor attached to it any mark, insignia, letter, word, figure, design, picture, or drawing of any nature.

(h) The flag should never be used as a receptacle for receiving, holding, carrying, or delivering anything.

(i) The flag should never be used for advertising purposes in any manner whatsoever. It should not be embroidered on such articles as cushions or handkerchiefs and the like, printed or otherwise impressed on paper napkins or boxes or anything that is designed for temporary use and discard; or used as any portion of a costume or athletic uniform. Advertising signs should not be fastened to a staff or halyard from which the flag is flown.

(j) The flag, when it is in such condition that it is no longer a fitting emblem for display, should be destroyed in a dignified way, preferably by burning.

Sec. 5. That during the ceremony of hoisting or lowering the flag or when the flag is passing in a parade or in a review, all persons present should face the flag, stand at attention, and salute. Those present in uniform should render the military salute. When not in uniform, men should remove the headdress with the right hand

holding it at the left shoulder, the hand being over the heart. Men without hats should salute in the same manner. Aliens should stand at attention. Women should salute by placing the right hand over the heart. The salute to the flag in the moving column should be rendered at the moment the flag passes.

Sec. 6. That when the national anthem is played and the flag is not displayed, all present should stand and face toward the music. Those in uniform should salute at the first note of the anthem, retaining this position until the last note. All others should stand at attention, men removing the headdress. When the flag is displayed, all present should face the flag and salute.

Sec. 7. That the pledge of allegiance to the flag, "I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation indivisible, with liberty and justice for all," be rendered by standing with the right hand over the heart. However, civilians will always show full respect to the flag when the pledge is given by merely standing at attention, men removing the headdress. Persons in uniform shall render the military salute.

Sec. 8. Any rule or custom pertaining to the display of the flag of the United States of America, set forth herein, may be altered, modified, or repealed, or additional rules with respect thereto may be prescribed, by the Commander-in-Chief of the Army and Navy of the United States, whenever he deems it to be appropriate or desirable; and any such alteration or additional rule shall be set forth in a proclamation.

Approved, December 22, 1942.

The American's Creed*

"I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign Nation of many sovereign States; a perfect union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

"I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag, and to defend it against all enemies."

The Pledge to the Flag†

"I pledge allegiance to the flag of the United States of America, and to the Republic for which it stands, one Nation, indivisible, with liberty and justice for all."

*William Tyler Page, Clerk of the United States House of Representatives, wrote "The American's Creed" in 1917. It was accepted by the House of Representatives on behalf of the American people on April 3, 1918.

†Written by Francis Belamy in August, 1892, then a member of the editorial staff of *The Youth's Companion* in Boston.

The Star-Spangled Banner

Francis Scott Key, 1814

I

O say, can you see, by the dawn's early light,
What so proudly we hail'd at the twilight's last gleaming?
Whose broad stripes and bright stars, thro' the perilous fight,
O'er the ramparts we watch'd, were so gallantly streaming?
And the rockets' red glare, bombs bursting in air,
Gave proof thro' the night that our flag was still there.
O say, does that star-spangled banner yet wave
O'er the land of the free and the home of the brave?

II

On the shore dimly seen thro' the mists of the deep,
Where the foe's haughty host in dread silence reposes,
What is that which the breeze, o'er the towering steep,
As it fitfully blows, half conceals, half discloses?
Now it catches the gleam of the morning's first beam,
In full glory reflected, now shines on the stream:
'T is the star-spangled banner: O, long may it wave
O'er the land of the free and the home of the brave!

III

And where is that band who so vauntingly swore
That the havoc of war and the battle's confusion,
A home and a country should leave us no more?
Their blood has wash'd out their foul footsteps' pollution.
No refuge could save the hireling and slave
From the terror of flight or the gloom of the grave:
And the star-spangled banner in triumph doth wave
O'er the land of the free and the home of the brave.

IV

O thus be it ever when free-men shall stand
Between their lov'd home and wild war's desolation;
Blest with vict'ry and peace, may the heav'n-rescued land
Praise the pow'r that hath made and preserv'd us a nation!
Then conquer we must, when our cause it is just,
And this be our motto: "In God is our trust!"
And the star-spangled banner in triumph shall wave
O'er the land of the free and the home of the brave!

The Monroe Doctrine

The Monroe Doctrine was announced in President James Monroe's message to Congress, during his second term on December 2, 1823 in part as follows:

"In the discussions to which this interest has given rise, and in the arrangements by which they may terminate, the occasion has been deemed proper for asserting as a principle in which rights and interests of the United States are involved, that the American continents, by the free and independent condition which they have assumed and maintain, are henceforth not to be considered as subjects for future colonization by any European power. . . . We owe it, therefore, to candor and to the amicable relations existing between the

United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered and shall not interfere. But with the governments who have declared their independence and maintain it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny by any European power in any other light than as the manifestation of an unfriendly disposition toward the United States."

BIOGRAPHIES OF THE PRESIDENTS

By ARTHUR M. SCHLESINGER, JR.

GEORGE WASHINGTON

was born on February 22 (February 11, old style), 1732, in Westmoreland County, Virginia. His early training was as a surveyor; but in 1752 he was appointed adjutant in the Virginia militia, and for the next three years he took an active part in the wars against the French and Indians, serving as General Braddock's aide, in the disastrous campaign against Fort Duquesne. In 1759 he resigned from the militia, married Martha Dandridge Custis, a widow, and settled down as a gentleman farmer at Mount Vernon.

As a militiaman, he had been exposed to the arrogance of the British officers, and his experience as a planter with British commercial restrictions increased his anti-British sentiment. He opposed the Stamp Act of 1765 and after 1770 became increasingly prominent in organizing resistance. A delegate to the Continental Congress, Washington was selected as commander in chief of the Continental Army and took command at Cambridge, Massachusetts, on July 3, 1775.

Inadequately supported and sometimes covertly sabotaged by the Congress, in charge of troops who were inexperienced, badly equipped and impatient of discipline, Washington conducted the war on the policy of avoiding major engagements with the British and wearing them down by harassing tactics. His able generalship, along with the French alliance and the growing weariness within Britain, brought the war to a conclusion with the surrender of Cornwallis at Yorktown on October 19, 1781.

The chaotic years under the Articles of Confederation led Washington to return to public life in the hope of promoting the formation of a strong central government. He presided over the Constitutional Convention and yielded to the universal demand that he serve as first President. In office, he sought to unite the nation in the service of establishing the authority of new government at home and abroad. Greatly distressed by the emergence of the Hamilton-Jefferson rivalry, he worked to maintain neutrality but actually sympathized more with Hamilton. Following his unanimous reelection in 1792, his second term was dominated by the Federalists. His Farewell Address rebuked the spirit of party and warned against foreign entanglements.

He died at Mt. Vernon on December 14, 1799. Tall, dignified and impressive, Washington gave a public impression of austerity, though he was capable of gaiety in private. His life was characterized by a strict sense of duty to his people, his

state and his nation. The standard biographies are by Fitzpatrick, Ford, Hughes and Stephenson.

JOHN ADAMS

was born on October 30 (October 19, old style), 1735, at Braintree, Massachusetts. A Harvard graduate, he considered teaching and the ministry but finally turned to the law and was admitted to the bar in 1758. He opposed the Stamp Act, served as lawyer for patriots indicted by the British and, by the time of the Continental Congresses, was in the vanguard of the movement for independence. In 1778 he was sent to France. Subsequently he helped negotiate the peace treaty with Britain and in 1785 became the U. S. envoy to London. Resigning in 1788, he was elected Vice President under Washington, and was reelected in 1792.

Though a Federalist, Adams did not get along with Hamilton who sought to prevent his election to the presidency in 1796, and thereafter intrigued against his administration. Adams was chosen with 71 electoral votes to 68 for his closest competitor, Thomas Jefferson, who became Vice President. In 1798 Adams's independent policy averted a war with France but completed the break with Hamilton and the right-wing Federalists while, at the same time, the enactment of the Alien and Sedition Acts, directed against foreigners and against critics of the government, exasperated the Jeffersonian opposition. The split between Adams and Hamilton elected Jefferson in 1800. Adams retired to his home in Quincy, Massachusetts. He later conducted a long correspondence with Jefferson and they died on the same day, July 4, 1826.

Stout, somewhat vain and frascible, Adams was honest, fearless and essentially fair-minded. His *Defence of the Constitution of the United States* (1787) contains original and striking if conservative political ideas. He married Abigail Smith in 1764, and their life together was long and notably happy. The standard biographies are by Morse and Chinard.

THOMAS JEFFERSON

was born on April 13 (April 2, old style), 1743, at Shadwell in Goochland (now Albermarle) County, Virginia. A William and Mary graduate, he studied law but from the start showed an interest in science and philosophy. His literary skill and political clarity brought him to the forefront of the revolutionary movement in Virginia. As delegate to the Continental Congress, he drafted the Declaration of Independence. In 1776 he entered the

Virginia House of Delegates and initiated a comprehensive reform program looking toward the abolition of feudal survivals in land tenure and the separation of church and state.

In 1779 he became governor, but constitutional limitations on his power combined with his own lack of executive energy caused an unsatisfactory administration, culminating in Jefferson's virtual abdication when the British invaded Virginia in 1781. He now retired to his beautiful home at Monticello, to his wife, Martha Wayles Skelton, whom he had married in 1772 and who died in 1782, and to his children.

Jefferson's *Notes on Virginia* (1784-85) illustrate his many-faceted interests, his limitless intellectual curiosity, his deep faith in agrarian democracy. Sent to Congress in 1783, he helped lay down the decimal system and drafted basic reports on the organization of the western lands. In 1785 he was appointed minister to France, where the Anglo-Saxon liberalism he had drawn from Locke was stimulated by contact with the thought which would soon ferment in the French Revolution. In 1790 Washington appointed him Secretary of State. While favoring the Constitution and a strengthened central government, Jefferson came to believe that Hamilton contemplated the establishment of a monarchy. Growing differences resulted in Jefferson's resignation on December 31, 1793.

Elected Vice President in 1796, Jefferson continued to serve as spiritual leader of the opposition to Federalism, particularly to the repressive Alien and Sedition Acts. He was elected President in 1800 by the House of Representatives as a result of Hamilton's decision to throw the Federalist votes to him rather than to Aaron Burr, who had tied him in electoral votes. The purchase of Louisiana from France in 1803, though in violation of his earlier constitutional scruples, was the most notable act of his administration. Reelected in 1804 with 162 electoral votes to 14 for the Federalist Charles C. Pinckney, Jefferson tried desperately during his second term to keep the United States out of the Napoleonic wars in Europe, employing to this end the unpopular embargo policy.

After his retirement to Monticello in 1809, he developed his interest in education, founding the University of Virginia and watching its development with never-flagging interest. He died at Monticello on July 4, 1826. Tall, loose-jointed, a poor speaker, Jefferson had an enormous variety of interests and skills, ranging from education and science to architecture and music. Economically his conception of democracy presupposed an essentially rural community of small freeholds; but his deep and abiding faith in the common man pro-

vides inspiration for future generations. The standard biographies are by Chinard, Bowers, Kimball and Randall.

JAMES MADISON

was born in Port Conway, Virginia, on March 16 (March 5, old style), 1751. A Princeton graduate, he threw himself into the struggle for independence on his return to Virginia in 1771. In the seventies and eighties he was active both in state politics, where he championed the Jefferson reform program, and in the Continental Congress. He was influential in the Constitutional Convention as leader of the group favoring a strong central government and as recorder of the debates; and he subsequently wrote, in collaboration with Alexander Hamilton and John Jay, the *Federalist* papers to aid the campaign for the adoption of the Constitution.

In the new Congress, Madison soon emerged as the leader in the House of the men who opposed Hamilton's financial program and his pro-British leanings in foreign policy. Retiring from Congress in 1797, he continued active in Virginia and drafted the Virginia Resolution protesting the Alien and Sedition Acts. His intimacy with Jefferson made him natural choice for Secretary of State after 1800.

In 1809 Madison succeeded Jefferson as President, with 122 electoral votes to 47 for the Federalist, C. C. Pinckney, and 6 scattering. His attractive wife, Dolly Payne Todd, whom he married in 1794, brought a new social sparkle to the executive mansion. In the meantime, increasing tension with Britain culminated in the War of 1812—a war for which the United States was unprepared, and for which Madison lacked the executive talent to clear out incompetence and mobilize the nation's energies. Madison was reelected in 1812, with 128 electoral votes to 89 for the Federalist, De Witt Clinton. In 1814 the British actually captured Washington and forced Madison to flee to Virginia.

In his domestic program, Madison capitulated to the Hamiltonian policies that he had resisted twenty years before, signing bills to establish a United States Bank and a higher tariff. Following his presidency, he remained in retirement in Virginia until his death on June 28, 1836. Small, wrinkled, unimpressive, Madison had a strong and acute political intelligence but lacked executive force. The standard lives are by Hunt, Brant and Rives.

JAMES MONROE

was born on April 28, 1758, in Westmoreland County, Virginia. A William and Mary graduate, he served in the army during the first years of the Revolution and

was wounded at Trenton. He then entered Virginia and later national politics under the sponsorship of Jefferson. In 1786 he married Eliza Kortright.

Fearing centralization, Monroe opposed the adoption of the Constitution and, as senator from Virginia, was highly critical of the Hamiltonian program. In 1794 he was appointed minister to France where his ardent sympathies with the Revolution exceeded the wishes of the State Department. A troubled diplomatic career ended with his recall in 1796. From 1799 to 1802 he was governor of Virginia. In 1803 Jefferson sent him to France to help negotiate the Louisiana Purchase and for the next few years he was active in various continental negotiations.

In 1808 Monroe flirted with the radical wing of the Republican party, which opposed Madison's candidacy; but the presidential boom came to naught and, after a brief term as governor of Virginia in 1811, Monroe accepted Madison's offer of the State Department. During the war he vainly sought a field command and served as acting Secretary of War in the last stages.

Elected President in 1816 with 183 electoral votes to 34 for the Federalist Rufus King, Monroe, the last of the Virginia dynasty, pursued the course of systematic tranquilization which won for his terms the name "the era of good feelings." Reelected without opposition in 1820, he continued Madison's surrender to the Hamiltonian domestic program, signed the Missouri Compromise, acquired Florida and, with the able assistance of his Secretary of State, John Quincy Adams, promulgated the Monroe Doctrine in 1823, declaring against foreign colonization or intervention in the Americas. He died in New York City on July 4, 1831.

A sound man of medium abilities, Monroe possessed qualities of judgment rather than of leadership. The standard biographies are by Morgan, Gilman and Styron.

JOHN QUINCY ADAMS

was born on July 11, 1767, at Braintree, Massachusetts, the son of John Adams. He spent his early years in Europe with his father, graduated from Harvard and entered law practice. His anti-Jeffersonian newspaper articles won him political attention. In 1794 he became minister to the Netherlands, the first of several diplomatic posts which occupied him until his return to Boston in 1801. In 1797 he married Louisa Catherine Johnson.

In 1803 he was elected to the Senate, nominally as a Federalist, but his repeated displays of independence on such issues as the Louisiana Purchase and the embargo caused his party to compel his resignation and ostracize him socially. In 1809 Madison

rewarded him for his support of Jefferson by appointing him minister to St. Petersburg. He helped negotiate the Treaty of Ghent in 1814 and became minister to London. In 1817 Monroe appointed him Secretary of State where he served with great distinction, gaining Florida from Spain without hostilities and playing an equal part with Monroe in formulating the Monroe Doctrine.

When no presidential candidate received a majority of electoral votes in 1824, Adams, with the support of Henry Clay, was elected in the House over Andrew Jackson who had the original plurality. Adams had ambitious plans of government activity to foster internal improvements and promote the arts and sciences; but congressional obstructionism combined with his own unwillingness or inability to play the role of a politician meant that little was accomplished. Retiring to Quincy after his defeat in 1828, he was elected to the House of Representatives where, though nominally a Whig, he pursued as ever an independent course. He led the fight to force Congress to receive anti-slavery petitions and fathered the Smithsonian Institution.

Stricken on the floor of the House, he died on February 23, 1848. Tactless, brusque, conscientious, a rough and savage debater, Adams spared neither himself nor his enemies. His long and detailed *Diary* gives a unique picture of the personalities and politics of the times. The standard biographies are by Morse and Clark.

ANDREW JACKSON

was born on March 15, 1767, in what is now generally agreed to be Waxhaw, South Carolina. After a turbulent boyhood as an orphan and a British prisoner, he moved west to Tennessee where he soon qualified for law practice but found time for such frontier pleasures as horse racing, cock-fighting and dueling. His marriage to Rachel Overton Robards in 1791 was complicated by subsequent legal uncertainties about the status of her divorce. During the seventeen nineties Jackson served in the Tennessee constitutional convention, the federal House of Representatives, the federal Senate and the Tennessee supreme court.

After some years as a country gentleman, living at the Hermitage near Nashville, Jackson in 1812 was given command of Tennessee troops sent against the Creeks. He defeated the Indians at Horseshoe Bend in 1814; subsequently he became a major general and won the battle of New Orleans over veteran British troops though after the treaty of peace had been signed at Ghent. In 1818 General Jackson invaded Florida, captured Pensacola and hanged two Englishmen named

Arbuthnot and Ambrister, creating an international incident. A presidential boom began for him in 1821 and in its service he returned to the Senate (1823-25). Though he won a plurality of electoral votes, he lost in the House when Clay threw his strength to Adams; but he won easily in 1828 by an electoral vote of 178 to 83.

As President, Jackson greatly expanded the power and prestige of the presidential office and carried through an unexampled program of domestic reform, vetoing the bill to extend the United States Bank, moving toward a hard-money currency policy and checking the program of federal internal improvements. He also vindicated federal authority against South Carolina with its doctrine of nullification and against France on the question of debts. The support given his policies by the workingmen of the East as well as by the farmers of the East, West and South resulted in his triumphant reelection in 1832 over Henry Clay by an electoral vote of 219 to 49, with 18 scattering.

After watching the inauguration of his hand-picked successor, Martin Van Buren, Jackson retired to the Hermitage where he maintained a lively interest in national affairs until his death on June 8, 1845. A tall, dignified man with a drawn and wrinkled face, Jackson has been endowed by partisan historians with a violence and irascibility he appears not to have possessed. His great contribution was to adjust the presidential office and the democratic doctrines of Jefferson to the new situation created by the Industrial Revolution. The standard biographies are by James, Bassett and Parton.

MARTIN VAN BUREN

was born on December 5, 1782, at Kinderhook, New York. After graduating from the village school, he became a law clerk, entered practice in 1803 and soon became active in state politics as state senator and attorney general. In 1821 he was elected to the United States Senate. He threw the support of his efficient political organization, known as the Albany Regency, to William H. Crawford in 1824 and to Jackson in 1828. After leading the opposition to Adams's administration in the Senate, he served briefly as governor of New York and resigned to become Jackson's Secretary of State. He soon became on close personal terms with Jackson and played an important part in turning the Jacksonian program from the times intended by his original Western backers.

In 1832 Van Buren became Vice President; in 1836, President, with an electoral vote of 170 against 124 scattered among four opponents. The Panic of 1837 over-

shadowed his term. He attributed it to the overexpansion of the credit and favored the establishment of an independent treasury as repository for the federal funds. In 1840 he established a ten-hour day on public works. Defeated by Harrison in 1840, he was the leading contender for the Democratic nomination in 1844 until he publicly opposed immediate annexation of Texas and was subsequently beaten by the Southern delegations at the Baltimore convention. This incident increased his growing misgivings about the slave power.

After working behind the scenes among the antislavery Democrats, Van Buren joined in the movement which led to the Free Soil party and became its candidate for President in 1848. He subsequently returned to the Democratic party while continuing to object to its pro-Southern policy. He died in Kinderhook on July 24, 1862. His *Autobiography* throws valuable sidelights on the political history of the times.

Small, erect, dapper, Van Buren had a reputation for slick politicking which won him such sobriquets as the Little Magician and the Red Fox of Kinderhook; but, as his later career showed, he was capable of taking firm and unpopular stands on public issues. His wife Hannah Hoes, whom he married in 1807, died in 1819. The standard biographies are by Shepard and Lynch.

WILLIAM HENRY HARRISON

was born in Charles City County, Virginia, on February 9, 1773. Joining the army in 1791, he was active in Indian fighting in the Northwest, became secretary of the Northwest Territory in 1798 and governor of Indiana in 1800. He married Anna Symmes in 1795. Growing discontent over white encroachments on Indian lands led to the formation of an Indian alliance under Tecumseh to resist further aggressions. In 1811 Harrison won a nominal victory over the Indians at Tippecanoe and in 1813 a more decisive one at the Battle of the Thames, where Tecumseh was killed.

After resigning from the army in 1814, Harrison had an obscure career in politics and diplomacy, ending up in twenty years as a county recorder in Ohio. Nominated for President in 1835 as a military hero whom the conservative politicians hoped to be able to control, he ran surprisingly well against Van Buren in 1836. Four years later he defeated Van Buren by an electoral vote of 234 to 60 but caught pneumonia and died in Washington a month after his inauguration, April 4, 1841. Harrison's qualities were those of a soldier rather than as a statesman or political leader. The standard biographies are by Cleaves and Goebel.

JOHN TYLER

was born in Charles City County, Virginia, on March 29, 1790. A William and Mary graduate, he entered law practice and politics, serving in the House of Representatives (1816-21) and later as governor of Virginia (1825, 1826), and as senator. A thorough-going strict constructionist, he supported Crawford in 1824 and Jackson in 1828 but broke with Jackson over his Bank policy and became a member of the Southern state-rights group which co-operated with the Whigs. In 1836 he resigned from the Senate rather than follow instructions from the Virginia legislature to vote for a resolution expunging censure of Jackson from the Senate record.

Elected Vice President on the Whig ticket in 1840, Tyler succeeded to the presidency on Harrison's death. His strict-constructionist views soon caused a split with the Henry Clay wing of the Whig party and a stalemate on domestic questions. Tyler's more considerable achievements were his support of the Webster-Ashburton treaty with Britain and his success in bringing about the annexation of Texas through joint congressional resolution.

After his presidency he lived in retirement in Virginia until the outbreak of the Civil War when he emerged briefly as chairman of a peace convention and then as delegate to the provisional Congress of the Confederacy. He died on January 18, 1862. He was married first to Letitia Christian March in 1813 and, two years after her death in 1842, to Julia Gardiner. Witty, amiable, courteous, Tyler was a Virginia gentleman whose presidency was hamstrung by the basic contradiction between his own ideas and those of the party which put him on the ticket as Vice President. The standard biographies are by Chitwood and Tyler.

JAMES KNOX POLK

was born in Mecklenburg County, North Carolina, on November 2, 1795. A graduate of the University of North Carolina, he moved west to Tennessee, was admitted to the bar and soon became prominent in state politics. In 1825 he was elected to the House of Representatives where he opposed Adams and, after 1829, became Jackson's floor leader in the fight against the Bank. In 1835 he became Speaker of the House. In 1839 he was elected governor of Tennessee but was beaten in tries for reelection in 1841 and 1843.

The supporters of Van Buren for the Democratic nomination in 1844 counted on Polk as his running mate; but, when Van Buren's stand on Texas alienated Southern support, the convention swung to Polk on the ninth ballot. He was elected over Henry Clay, the Whig candidate, by an

electoral vote of 170 to 105. Rapidly disillusioning those who thought that he would not run his own administration, Polk proceeded steadily and precisely to achieve four major objectives—the acquisition of California, the settlement of the Oregon question, the reduction of the tariff and the establishment of the independent treasury. He also enlarged the Monroe Doctrine to exclude all non-American intervention in American affairs, whether forcible or not, and he forced Mexico into a war which he waged to a successful conclusion. His wife Sarah Childress, whom he married in 1824, was a woman of charm and ability. Polk died in Nashville, Tennessee, on June 15, 1849.

Serious, hardworking, lacking in color, Polk has long been underrated by historians who mistakenly regarded him as a slaveholders' puppet; in fact, few presidents have so thoroughly controlled their own administration or have so ably accomplished the purposes they set for themselves. Polk's *Diary* reflects the mood and problems of his presidency. The standard biography is by McCormac.

ZACHARY TAYLOR

was born at Montebello, Orange County, Virginia, on November 24, 1784. Embarking on a military career in 1808, Taylor fought in the War of 1812, the Black Hawk War and the Seminole War, holding in between garrison jobs on the frontier or desk jobs in Washington. A brigadier general as a result of his victory over the Seminoles at Lake Okechobee (1837), Taylor held a succession of Southwestern commands and in 1846 established a base on the Rio Grande, where his forces engaged in hostilities which precipitated the war with Mexico. He captured Monterey in July, 1846, and, disregarding Polk's orders to stay on the defensive, defeated Santa Anna at Buena Vista in February, 1847, ending the war in the northern provinces.

Though Taylor had never cast a vote for President, his party affiliations were Whiggish, and his availability was increased by his difficulties with Polk. He was elected President over the Democrat Lewis Cass by an electoral vote of 163 to 127. During the revival of the slavery controversy, which was to result in the Compromise of 1850, Taylor began to take an increasingly firm stand against appeasing the South; but he died in Washington on July 9, 1850, in the midst of the fight over the Compromise. He married Margaret Mackall Smith in 1810. His bluff and simple soldierly qualities won him the name of Old Rough and Ready. During his brief term as President he displayed a growing insight into political questions. The standard biographies are by Hamilton and by Bent and McKinley.

MILLARD FILLMORE

was born at Locke, Cayuga County, New York, on January 7, 1800. A lawyer, he entered politics as an Anti-Mason under the sponsorship of Thurlow Weed, editor and party boss, and subsequently followed Weed into the Whig party. He served in the House of Representatives (1832-34 and 1836-42) and played a leading role in writing the tariff of 1842. Defeated for governor of New York in 1844, he became comptroller in 1848, was put on the Whig ticket with Taylor as a concession to the Clay wing of the party and became President upon Taylor's death in 1850.

As President, Fillmore broke with Weed and William H. Seward and associated himself with the pro-Southern Whigs, supporting the Compromise of 1850. Defeated for the Whig nomination in 1852, he ran for President in 1856 as candidate of the American or Know Nothing party, which sought to unite the country against foreigners in the alleged hope of diverting it from the explosive slavery issue. Fillmore opposed Lincoln during the Civil War. He died in Buffalo on March 8, 1874. He was married in 1826 to Abigail Powers, who died in 1853, and in 1858 to Caroline Carmichael McIntosh. Urbane, gracious, colorless and weak, Fillmore was an undistinguished President. The standard biography is by Griffis.

FRANKLIN PIERCE

was born at Hillsborough, New Hampshire, on November 23, 1804. A Bowdoin graduate and lawyer, he won rapid political advancement in the Democratic party, in part because of the prestige of his father, Governor Benjamin Pierce. By 1831 he was Speaker of the New Hampshire House of Representatives; from 1833 to 1837 he served in the federal House and from 1837 to 1842 in the Senate. His wife, Jane Means Hamilton, whom he had married in 1834, disliked Washington and the somewhat dissipated life led by Pierce; and in 1842 Pierce, resigning from the Senate, took up a successful law practice in Concord, New Hampshire.

During the Mexican War Pierce was a brigadier general. Thereafter he continued to oppose antislavery tendencies within the Democratic party. As a result, he was the Southern choice to break the deadlock at the Democratic convention of 1852 and was nominated on the 49th ballot. Pierce polled up 254 electoral votes to 42 for Winfield Scott, the Whig candidate.

As President, Pierce followed a course of appeasing the South at home and of playing with schemes of territorial expansion abroad. The failure of both his foreign and domestic policies prevented his renomination; and he died in Concord, New Hampshire, on October 8, 1869, in relative ob-

scurity. A kindly and courteous person, Pierce was weak, unstable and lacking in presidential qualities. The standard biography is by Nichols.

JAMES BUCHANAN

was born near Mercersburg, Pennsylvania, on April 23, 1791. A Dickinson graduate and a lawyer, he entered Pennsylvania politics as a Federalist. With the disappearance of the Federalist party, he became a Jacksonian Democrat. He served with ability in the House (1820-31), as minister to St. Petersburg (1831-34) and in the Senate (1834-45) and in 1845 became Polk's Secretary of State. Disappointed in the presidential nomination in 1852, Buchanan became minister to Britain where he participated with other American diplomats in Europe in drafting the expansionist Ostend Manifesto.

In 1856 Buchanan received the Democratic nomination and won the election, gaining 174 electoral votes to 114 for John C. Frémont, the Republican candidate, and 8 for Millard Fillmore, American party. The growing crisis over slavery presented Buchanan with problems he lacked the will to tackle. His appeasement of the South alienated the Stephen Douglas wing of the Democratic party without reducing Southern militancy on slavery issues. While denying the right of secession, Buchanan also denied that the federal government could do anything about it. He supported the administration during the Civil War and died in Lancaster, Pennsylvania, on June 1, 1868.

The only President to remain a bachelor throughout his term, Buchanan used his charming niece Harriet Lane as White House hostess. Legalistic, indecisive and timorous as President, Buchanan filled his other public offices capably. The standard biography is by Curtis.

ABRAHAM LINCOLN

was born in Hardin (now Larue) County, Kentucky, on February 12, 1809. His family moved to Indiana and then to Illinois, and Lincoln gained what education he could along the way. While reading law, he worked in a store, managed a mill, surveyed and split rails. In 1834 he went to the state legislature as a Whig and became the party's floor leader. For the next twenty years he remained in law practice in Springfield, except for a single term (1847-49) in Congress where he denounced the Mexican War. In 1855 he was a candidate for senator and in 1856 he joined the new Republican party.

A leading but unsuccessful candidate for the vice-presidential nomination with Frémont, Lincoln gained national attention in 1858 when, as Republican candidate for

senator from Illinois, he engaged in a series of debates with Stephen A. Douglas, the Democratic candidate. He lost the senatorial election, but continued to prepare the way for the 1860 Republican convention and was rewarded with the presidential nomination on the third ballot. He polled 180 electoral votes, as against the 123 of his three opponents, but had only a plurality of the popular vote.

From the start, Lincoln made clear that, unlike Buchanan, he believed the national government had the power to crush the rebellion. Not an abolitionist, he held the slavery issue subordinate to that of preserving the Union but soon perceived that the war could not be brought to a successful conclusion without freeing the slaves. His administration was hampered by the incompetence of many Union generals, the inexperience of the troops and the harassing political tactics both of the Republican Radicals, who favored a hard policy toward the South, and the Democratic Copperheads, who desired a negotiated peace. The Gettysburg Address of November 19, 1863, marks the high point in the record of American eloquence. His patient search for a winning combination finally brought Generals Ulysses S. Grant and William T. Sherman to the top; and their series of victories in 1864 dispelled the mutterings from both Radicals and Peace Democrats which at one time seemed to threaten Lincoln's reelection. He received 221 electoral votes to 21 for George B. McClellan, the Democratic candidate. His inaugural address urged leniency toward the South: "with malice toward none; with charity for all, let us strive on to finish the work we are in; to bind up the nation's wounds." This policy aroused growing opposition on the part of the Republican Radicals, but Lincoln was assassinated by John Wilkes Booth at Ford's Theater, Washington, on April 14, 1865, before the matter could be put to test.

Lincoln's marriage to Mary Todd in 1842 was often unhappy and turbulent, in part because of his wife's pronounced instability. By his remarkable literary artistry, his essential patience and devotion, his profound sense of the importance of government by, for and of the people, by the manner of his life and of his death, Lincoln has won a unique place in the hearts of Americans. The standard biographies are by Sandburg, Herndon, Nicolay and Hay.

ANDREW JOHNSON

was born at Raleigh, North Carolina, on December 29, 1808. Self-educated, he became a tailor in Greeneville, Tennessee, but soon went into politics where he rose steadily. From 1843 to 1853 he served in the House of Representatives, 1853-57 as governor of Tennessee and in 1857 was

elected Senator. Politically he was a Jacksonian Democrat, and his specialty was the fight for a more equitable land policy. Alone among the Southern Senators, he stood by the Union during the Civil War. In 1862 he became war governor of Tennessee and carried out a thankless and difficult job with great courage. Johnson became Lincoln's running mate in 1864 as result of an attempt to give the ticket a nonpartisan and nonsectional character. Succeeding to the presidency on Lincoln's death, Johnson sought to carry out his policy but without his political skill. The result was a hopeless conflict with the Radical Republicans who dominated Congress, passed measures over Johnson's vetoes and attempted to limit the power of the executive concerning appointments and removals. The conflict culminated with Johnson's impeachment for attempting to remove his disloyal Secretary of War in defiance of the Tenure of Office Act which required senatorial concurrence for such dismissals. The opposition failed by one vote to get the two-thirds necessary for conviction.

After his presidency, Johnson maintained an interest in politics and in 1874 was elected to the Senate. He died near Carter Station, Tennessee, on July 31, 1875. He married Eliza McCardle in 1827. An honest, courageous and intelligent man, Johnson lacked the tact, patience and self-control to be an effective President. The standard biographies are by Winston, Stryker and Milton.

ULYSSES SIMPSON GRANT

was born (as Hiram Ulysses Grant) at Point Pleasant, Ohio, on April 27, 1822. He finished West Point in 1843 and served without particular distinction in the Mexican War. In 1848 he married Julia Dent. He resigned from the army in 1854, following warnings from his commanding officer about his drinking habits, and for the next six years held a wide variety of jobs in the Middle West. With the outbreak of the Civil War, he sought a command and soon, to his surprise, was made a brigadier general. His continuing successes in the western theaters, culminating in the capture of Vicksburg in 1863, brought him national fame and soon the command of all the Union armies. His dogged, implacable policy of concentrating on dividing and destroying the Confederate armies brought the war to an end in 1865. In 1866 he was made full general.

Grant's relations with Johnson grew steadily worse; and in 1868, as the Republican candidate for President, Grant was elected with 214 electoral votes to 80 for the Democrat Horatio Seymour. From the start Grant showed his unfitness for the office. His cabinet was weak, his do-

mestic policy was confused, many of his intimate associates were corrupt. The notable achievement in foreign affairs was the settlement of controversies with Great Britain in the Treaty of London (1871), negotiated by his able Secretary of State, Hamilton Fish.

Nominated for a second term, he defeated Horace Greeley, the Liberal Republican candidate, 286 votes to 63. The Panic of 1873 created difficulties for his second term.

After retiring from office, Grant toured Europe for two years and returned in time to accede to a third-term boom, but was beaten in the convention of 1880. Illness and bad business judgment darkened his last years, but he worked steadily at the *Personal Memoirs* which were to be so successful when published after his death at Mount McGregor, near Saratoga, New York, on July 23, 1885. Inarticulate, taciturn, loyal to his friends, he was an able general who should never have accepted the presidency. The standard biographies are by Hesseltine and Woodward.

RUTHERFORD BIRCHARD HAYES

was born at Delaware, Ohio, on October 4, 1822. A graduate of Kenyon College and the Harvard Law School, he practiced law in Sandusky and then in Cincinnati, Ohio. In 1852 he married Lucy Webb. A Whig, he joined the Republican party in 1855. During the Civil War he rose to the rank of major general. He served in Congress from 1864 to 1867 and then confirmed a reputation for honesty and efficiency in two terms as governor of Ohio. His return to the governorship in 1875 made him the logical candidate for those Republicans who wished to stop James G. Blaine in 1876; and he was successfully nominated.

The result of the election was for some time in doubt and hinged upon disputed returns from South Carolina, Louisiana, Florida and Oregon. Samuel J. Tilden, the Democratic candidate, had the larger popular vote but was adjudged by the strictly partisan decisions of the Electoral Commission to have one less electoral vote, 185 to 184. The national acceptance of this result was due in part to the general understanding that Hayes would pursue a conciliatory policy toward the South. He withdrew the troops from the South, took a conservative position on financial and labor issues and urged civil-service reform.

Hayes served only one term by his own wish and spent the rest of his life in various humanitarian endeavors. He died in Fremont, Ohio, on January 17, 1893. A hard-working, conscientious, sensible man, Hayes represented the best type of Republican of his day. The standard biographies are by Eckenrode and Williams.

JAMES ABRAM GARFIELD,

the last President to be born in a log cabin, was born at Cuyahoga County, Ohio, on November 19, 1831. A Williams graduate, he taught school for a time and entered Republican politics in Ohio. In 1858 he married Lucretia Rudolph. During the Civil War he had a promising career, rising to the rank of major general of volunteers; but in 1863 he was elected to the House of Representatives where he served until 1880. His oratorical and parliamentary abilities soon made him the leading Republican in the House, though his record was marred by his unorthodox acceptance of a fee in the DeGolyer paving contract case and by suspicions of his complicity in the Credit Mobilier scandal.

In 1880 Garfield was elected to the Senate; but instead became the presidential candidate on the 36th ballot as a result of a deadlock in the Republican convention. He gained 214 electoral votes to 155 for General Winfield Scott Hancock, the Democratic candidate. Garfield's administration was barely under way when he was shot by Charles J. Guiteau, a disappointed office seeker, in July. He died in Elberon, New Jersey, on September 19, 1881. An attractive and eloquent man, he was much beloved in his day. The standard biographies are by Smith and Caldwell.

CHESTER ALAN ARTHUR

was born at Fairfield, Vermont, on October 5, 1830. A graduate of Union College, he became a successful New York lawyer. In 1859 he married Ellen Herndon. During the Civil War he held administrative jobs in the Republican state administration and in 1871 was appointed collector of the Port of New York by Grant. This post gave him control over considerable patronage; and, though not personally corrupt, Arthur managed his power in the interests of the New York machine so openly that President Hayes in 1877 called for an investigation and suspended Arthur from his responsibilities.

In 1880 Arthur was nominated for Vice President in the hope of conciliating the followers of Grant and the powerful New York machine. As President on Garfield's assassination, Arthur, stepping out of his familiar role as spoilsman, backed civil-service reform, reorganized the cabinet and prosecuted political associates accused of post office graft. Losing machine support and failing to gain the reformers, he was not renominated. He died in New York City on November 18, 1886. A tall, handsome, dignified man with real administrative abilities, he was a better President than his previous record promised. The standard biography is by Howe.

(STEPHEN) GROVER CLEVELAND

was born at Caldwell, New Jersey, on March 18, 1837. He was admitted to the bar in Buffalo, New York, in 1859 and lived there as a lawyer, with occasional incursions into Democratic politics, for more than twenty years. He did not participate in the Civil War. As mayor of Buffalo in 1881, he carried through a reform program so ably that the Democrats ran him successfully for governor in 1882. In 1884 he won the Democratic nomination for President. The campaign contrasted Cleveland's spotless public career with the uncertain record of James G. Blaine, the Republican candidate, and Cleveland received enough Mugwump (Independent Republican) support to win by 219 to 182 electoral votes.

As President, Cleveland pushed civil-service reform, opposed the pension grab and attacked the high tariff rates. While in the White House he married Frances Folsom (1886). Renominated in 1888, Cleveland was defeated by Benjamin Harrison, polling more popular but fewer electoral votes. In 1892 he was reelected over Harrison, 277 to 145, with 22 votes for James B. Weaver, the Populist candidate. When the Panic of 1893 burst upon the country, Cleveland's attempts to solve it by sound-money measures alienated the free-silver wing of the party, while his tariff policy alienated the protectionists. In 1894 he sent troops to break the Pullman strike. In foreign affairs his firmness caused Great Britain to back down in the Venezuela border dispute.

In his last years Cleveland was an active and much respected public figure. He died in Princeton, New Jersey, on June 24, 1908. An honest, stubborn, high-principled man, Cleveland was an old-fashioned liberal in the nineteenth-century sense who was baffled by the new problems of industrial society. The standard biographies are by Nevins and McElroy.

BENJAMIN HARRISON

was born in North Bend, Ohio, on August 20, 1833, the grandson of William Henry Harrison. A graduate of Miami University, he took up the law in Indiana and became active in Republican politics. In 1853 he married Caroline Lavinia Scott. During the Civil War he rose to the rank of brigadier general. A sound-money Republican, he was elected senator from Indiana in 1881 and in 1888 received the Republican nomination for President on the 8th ballot. Though behind on the popular vote, he won over Grover Cleveland in the electoral college by 233 to 168.

As President, Benjamin Harrison failed to please either the bosses or the reform element in the party. In foreign affairs he backed Secretary of State Blaine whose policy foreshadowed later American im-

perialism. In 1892 Harrison was renominated, but Cleveland beat him in the election. His wife died in the White House in 1892, and Harrison married her niece, Mary Scott (Lord) Dimmick, in 1896. After his presidency, he resumed law practice. He died in Indianapolis, Indiana, on March 13, 1901. Harrison was an honest man of very medium abilities.

WILLIAM MCKINLEY

was born in Niles, Ohio, on January 29, 1843. A graduate of Allegheny College, he rose from the ranks to become a major in the Civil War. Subsequently he opened a law office in Canton, Ohio, and in 1871 married Ida Saxton. Elected to Congress in 1876, he served there steadily till 1890 except for 1884-86. His faithful advocacy of business interests culminated in the passage of the highly protective McKinley Tariff of 1890. With the support of Mark Hanna, a shrewd Cleveland businessman interested in safeguarding tariff protection, McKinley became governor of Ohio in 1891 and Republican presidential candidate in 1896. The business community, alarmed by the progressivism of William Jennings Bryan, the Democratic candidate, spent considerable money to assure McKinley's victory which was by the margin of 271 to 176 in the electoral college.

The chief event of McKinley's administration was the war with Spain which resulted in our acquisition of the Philippines and other islands. With imperialism as an issue, McKinley defeated Bryan again in the election of 1900 by 292 to 155. On September 6, 1901, he was shot at Buffalo by Leon F. Czolgosz, an anarchist, and he died there on September 14. McKinley was a characteristic Republican politician dedicated to the service of the business community. The standard biography is by Olcott.

THEODORE ROOSEVELT

was born in New York City on October 27, 1858. A Harvard graduate, he was early interested in ranching, in politics and in writing picturesque historical narratives. He was a Republican member of the New York Assembly, 1882-84, an unsuccessful candidate for mayor of New York in 1888, a U. S. Civil Service Commissioner under Harrison, in 1895 Police Commissioner of New York City, and in 1897 Assistant Secretary of the Navy under McKinley. After exuding a belligerence which helped bring on the war with Spain, he resigned in 1898 to help organize a volunteer regiment named the Rough Riders and take a more direct part in the war. Always publicity-shrewd, he won the New York gubernatorial nomination in 1898 in spite of pronounced lack of enthusiasm on the part of the bosses.

After two years of T.R. in Albany, the New York bosses succeeded in getting him the vice-presidential nomination in 1900. Roosevelt accepted it with reluctance, feeling that his career had been ruined. As President on McKinley's assassination, he perceived the new popular mood of progressivism and initiated a policy of trust-busting, designed to control giant corporations. He also strengthened government powers over interstate commerce and launched a conservation program to save natural resources. In foreign affairs he pursued a truculent policy, permitting the instigation of a revolt in Panama to dispose of Colombian objections to the Panama Canal and helping to maintain the balance of power in the East by bringing the Russo-Japanese war to an end. In 1904 he decisively defeated Alton B. Parker, his conservative Democratic opponent, by an electoral margin of 336 to 140.

Following his second term he went big-game hunting in Africa and toured Europe. On his return to the United States, his increasing coldness toward Taft led him to overlook his earlier disclaimer of third-term ambitions and to reenter politics. Defeated by the machine in the Republican convention of 1912, he organized the Progressive party and polled more votes than Taft, though the split brought about the election of Wilson. From 1915 on Roosevelt strongly favored intervention in the European war. He became deeply embittered at Wilson's refusal to allow him to raise a volunteer division. He died in Oyster Bay, New York, on January 6, 1919. He was married twice: in 1880 to Alice Hathaway Lee, who died in 1884; and in 1886 to Edith Kermit Carow.

The athletic advocate of the strenuous life, with his high voice, prominent teeth and thick glasses, Roosevelt captured the imagination of the American people. More sober judgment suggests that, so far as his progressivism was concerned, his bark was worse than his bite, but he was one of the great personalities of American history. The standard biography is by Pringle.

WILLIAM HOWARD TAFT

was born in Cincinnati, Ohio, on September 15, 1857. A Yale graduate, he entered Ohio Republican politics in the eighteen thirties. In 1886 he married Helen Herron. From 1887 to 1890, he served on the Ohio superior court; 1890-92, as solicitor general of the United States; 1892-1900, on the federal circuit court. In 1900 McKinley appointed him president of the Philippine Commission and in 1901 governor general. Taft had great success in pacifying the Filipinos, solving the problem of the church lands, improving economic conditions and establishing limited self-govern-

ment. His period as Secretary of War 1904-08 further demonstrated his capacity as administrator and conciliator; and he was Roosevelt's hand-picked successor in 1908. In the election he polled 321 electoral votes to 162 for William Jennings Bryan.

As President, though he carried on many of Roosevelt's policies, Taft got into increasing trouble with the progressive wing of the party and displayed mounting irritability and indecision. After his defeat in 1912, he became professor of constitutional law at Yale. In 1921 he was appointed Chief Justice of the United States. He died in Washington on March 8, 1930. Enormously large, deliberate and good-humored, Taft excelled as an administrator and judge, not as a political leader. The standard biography is by Pringle.

(THOMAS) WOODROW WILSON

was born in Staunton, Virginia, on December 28, 1856. A Princeton graduate, he turned from law practice to post-graduate work in political science at Johns Hopkins University, receiving his Ph.D. in 1886. He taught at Bryn Mawr, Wesleyan and Princeton, and in 1902 was made president of Princeton. After an unsuccessful attempt to democratize the social life of Princeton, he welcomed an invitation in 1910 to be the Democratic gubernatorial candidate in New Jersey. His success in fighting the machine and putting through a reform program attracted national attention.

In 1912, after a protracted contest at Baltimore, Wilson won the Democratic nomination on the 46th ballot. In the election he received 435 electoral votes to 88 for Roosevelt and 8 for Taft. During his first term Wilson proceeded under the standard of the New Freedom to enact a program of domestic reform, including the Federal Reserve Act, the Clayton Anti-Trust Act, the establishment of the Federal Trade Commission and other measures designed to restore competition in the face of the great monopolies. In foreign affairs, while privately sympathetic with the Allies, he strove to maintain strict neutrality in the European war and warned both sides against encroachments on American interests.

Reelected in 1916 as a peace candidate, he tried to mediate between the warring nations; but, when the Germans resumed unrestricted submarine warfare in 1917, Wilson brought the United States into what he now believed was a war to make the world safe for democracy. He supplied the classic formulations of Allied war aims, and the armistice of November, 1918, was negotiated on the basis of Wilson's Fourteen Points. In 1919 he strove at Versailles to lay the foundations for enduring peace.

He accepted the imperfections of the Versailles Treaty in the expectation that they could be remedied by action within the League of Nations. He probably could have secured ratification of the treaty if he had adopted a more conciliatory attitude toward the mild reservationists; but his insistence on all or nothing eventually caused the diehard isolationists and diehard Wilsonites to unite in rejecting a compromise.

In September, 1919, Wilson suffered a paralytic stroke which limited his future activity. After the presidency he lived on in retirement in Washington, dying February 3, 1924. He was married twice—in 1885 to Ellen Louise Axson, who died in 1914, and in 1915 to Edith Bolling Galt. A man of high principle, inspiring eloquence and great intellectual ability, Wilson was the first leader to fire the imagination of the masses of the world with the vision of world peace. The standard biography is by Baker.

WARREN GAMALIEL HARDING

was born in Warren County, Ohio, on November 2, 1865. After attending Ohio Central College, Harding became interested in journalism and in 1885 bought the *Marion (Ohio) Star*. In 1891 he married a wealthy widow, Florence Kling De Wolfe. As his paper prospered, he entered Republican politics, serving as state senator, (1898-1902), and as lieutenant governor, (1902-04). In 1910 he was defeated for governor but in 1914 was elected to the Senate. His reputation as orator made him keynoter in the 1916 convention.

When the 1920 Republican convention was deadlocked between Leonard Wood and Frank O. Lowden, Harding was made the dark-horse nominee on his solemn affirmation that there was no reason in his past that he should not be. Straddling the League question, Harding was elected easily, with 404 electoral votes to 127 for James M. Cox, his Democratic opponent. His cabinet contained some able men, but also some manifestly unfit for public office. Harding's own intimates were mediocre when they were not corrupt. The impending disclosure of scandals in the Interior and Justice departments and in the Veterans Bureau, as well as political setbacks, profoundly worried him. On his return from Alaska in 1923, he died suddenly at San Francisco on August 2. A handsome and genial man, undiscriminating in his associates, lacking in political ideas or fortitude, Harding was totally unfitted for the presidency.

(JOHN) CALVIN COOLIDGE

was born in Plymouth Notch, Vermont, on July 4, 1872. An Amherst graduate, he went

into law practice at Northampton, Massachusetts, in 1898. He married Grace Anna Goodhue in 1905. He entered Republican state politics, becoming successively mayor of Northampton, state senator, lieutenant governor and, in 1918, governor. His conduct in regard to the Boston police strike in 1919 won him a somewhat undeserved reputation for decisive action and brought him the Republican vice-presidential nomination in 1920. After Harding's death Coolidge handled the Washington scandals with care and finally managed to save the Republican party from public blame for the widespread corruption.

In 1924 Coolidge won reelection without difficulty, getting 382 electoral votes to 136 for the Democrat, John W. Davis, and 13 for Robert M. La Follette running on the Progressive ticket. His second term, like his first, was characterized by deference to big business, indifference to the underprivileged and a general satisfaction with the existing economic order. He stated that he did not choose to run in 1928, but he may have hoped to be drafted anyway.

After his presidency, Coolidge lived quietly in Northampton, writing an unilluminating *Autobiography* and conducting a syndicated column. He died in Northampton, Massachusetts, on January 5, 1933. His dry, Yankee humor, his frugality and glumness made him a paradoxically popular President in the boom period. The standard biographies are by White and Fuess.

HERBERT (CLARK) HOOVER

was born at West Branch, Iowa, on August 10, 1874. A Stanford graduate, he worked from 1895 to 1913 as a mining engineer and consultant in North America, Europe, Asia, Africa and Australia. In 1899 he married Lou Henry. During the First World War he served with distinction as chairman of the American Relief Committee in London, as chairman of the Committee for Relief in Belgium and as United States Food Administrator. His political affiliations were still sufficiently indeterminate for him to be mentioned as a possibility for both Republican and Democratic nominations in 1920; but after the election he served both Harding and Coolidge as Secretary of Commerce.

In the election of 1928 Hoover received 444 electoral votes to 87 for Alfred E. Smith, the Democratic candidate. He soon faced the worst depression in the nation's history; but his attack upon it was hampered by his devotion to the theory that the forces which brought the crisis would soon bring the revival and then by his belief that in too many areas the federal government had no power to act. In a succession of vetoes he struck down measures proposing a national employment

system or national relief; he reduced income tax rates; and only at the end of his term did he yield to popular pressure and set up agencies to make emergency loans (mostly to large business).

After his defeat in 1932, Hoover occupied himself with private business and with books and speeches attacking the New Deal. President Truman brought him back into official life by charging him in 1946 with various missions concerning the world food situation.

FRANKLIN DELANO ROOSEVELT

was born in Hyde Park, New York, on January 30, 1882. A Harvard graduate, he attended Columbia Law School and was admitted to the New York bar. In 1910 he was elected to the New York state senate as a Democrat. Re-elected in 1912, he was appointed Assistant Secretary of the Navy by Woodrow Wilson in 1913. In 1920 his radiant personality and his war services resulted in his nomination for Vice President as James M. Cox's running mate. After his defeat, he returned to law practice in New York. In August, 1921, Roosevelt was stricken with infantile paralysis while at Campobello, New Brunswick. After a long and gallant fight against the disease he recovered partial use of his legs. In 1924 and 1928 he led the fight at the Democratic national conventions for the nomination of Governor Alfred E. Smith of New York; and in 1928 Roosevelt was himself induced to run for governor of New York. He was elected and was re-elected in 1930.

In 1932 Roosevelt received the Democratic nomination for President and immediately launched on a campaign which brought new spirit to a weary and discouraged nation. He won the election over Herbert Hoover by a margin of 472 to 59 in the electoral college. His first term was characterized by an unfolding of the New Deal program, with greater benefits for labor, the farmers and the unemployed and the progressive estrangement of most of the business community.

At an early stage Roosevelt became aware of the menace to world peace involved in the existence of totalitarian fascism and from 1937 on he tried to focus public attention on the trend of events in Europe and Asia. As a result he was widely denounced as a warmonger. He was re-elected in 1936 over Alfred M. Landon by the overwhelming electoral margin of 523 to 8; and the gathering international crisis caused him to decide to run again in 1940, when he defeated Wendell L. Willkie, 449 to 82.

Roosevelt's program to bring maximum aid to Britain and, after June, 1941, to Russia was bitterly opposed by a small but organized minority, until the Japanese

attack on Pearl Harbor restored national unity. During the war Roosevelt shelved the New Deal in the interests of conciliating the business community, both in order to get full production during the war and to prepare the way for a united acceptance of the peace settlements after the war. A series of conferences with Winston Churchill and Joseph Stalin laid down the bases for the postwar world. In 1944 he was elected to a fourth term, with 432 electoral votes to 99 for Governor Thomas Dewey.

On April 12, 1945, Roosevelt died at Warm Springs, Georgia, shortly after his return from the Yalta conference. His wife, Anna Eleanor Roosevelt, whom he married in 1905, is a woman of great ability who made significant contributions to her husband's policies. No President has been faced with so many staggering responsibilities, both at home and abroad, as Franklin Roosevelt. His success in bringing America safely through the greatest depression and the greatest war in world history was an accomplishment of the highest statesmanship; and his buoyant, fighting personality has left an indelible impression upon the national imagination.

HARRY S. TRUMAN

was born on a farm near Lamar, Missouri, on May 8, 1884. During the First World War he served in France with the 129th Field Artillery. After engaging briefly and unsuccessfully in the haberdashery business in Kansas City, Truman entered local politics. Under the sponsorship of Thomas Pendergast, Democratic boss of Missouri, he held a number of local offices, preserving his personal honesty in the midst of a notoriously corrupt political machine. In 1934 he was elected to the Senate and was re-elected in 1940. During his first term he was a loyal but quiet supporter of the New Deal; but in the course of his second term an appointment as head of a Senate committee to investigate war production brought to the surface his special qualities of honesty, common sense and hard work, and he won widespread respect.

When opposition developed to the re-nomination of Henry Wallace for Vice President in 1944, Roosevelt, who doubtless had in mind the importance of conciliating the Senate for the ratification of the peace settlement, indicated that Truman would be acceptable. Since Roosevelt's death, Truman has nominally sought to continue the Roosevelt policies, but the New Dealers in the key Washington jobs have gradually been replaced by politicians and businessmen in a more orthodox tradition, many of them hailing from Missouri. Truman married Bess Wallace in 1919.

U. S. Cabinet Heads with Dates of Appointment, 1789 to 1946

THE CABINET

BY ARTHUR M. SCHLESINGER, JR.

Adapted from *The Congressional Directory*.

STATE. The Secretary of State has the principal responsibility, under the President, for the determination of the policy of the government in relation to international problems. He is charged with the conduct of negotiations pertaining to the protection of American rights and interests throughout the world, and the promotion of beneficial intercourse between the United States and other countries. He also performs certain domestic duties, such as having custody of the seal of the United States and publishing the laws enacted by Congress.

TREASURY. The Secretary of the Treasury is charged by law with the management of the national finances. He superintends the collection of the revenue; grants warrants for money drawn from the Treasury in pursuance of appropriations made by law, and for the payment of moneys into the Treasury; directs the forms of keeping and rendering public accounts; prepares plans for the improvement of the revenue and for the support of the public credit; and submits a report annually to Congress on the condition of the public finances, and the results of activities under his supervision, which include, among others, the coinage and printing of money, and the administration of the Coast Guard, Narcotics and Secret Services.

WAR. The Secretary of War is charged by law with the supervision of all estimates of appropriations for the expenses of the Department, including the Military Establishment; of all purchases of Army supplies; of all expenditures for the support, transportation, and maintenance of the Army; and of civil expenditures placed by Congress under his direction.

JUSTICE. The Attorney General is the chief law officer of the Federal Government. He represents the United States in legal matters generally and gives advice and opinions when requested by the President or by the heads of the executive departments. He appears in the Supreme Court in cases of exceptional importance, exercises general superintendence over United States district attorneys and marshals in the various judicial districts, and provides special counsel for the United States when the character of the interests involved requires such action. The Federal Bureau of Investigation and the Bureau of Prisons are under his direction.

POST OFFICE. The Postmaster General is the executive head of the Postal Service. Subject to the approval of the President, he makes postal treaties with foreign governments.

NAVY. The Secretary of the Navy is responsible for the supervision of all naval matters.

INTERIOR. The Secretary of the Interior has the primary task of developing and conserving the natural resources of the United States and its territories for this and future generations. He is charged with the supervision of public business relating to such offices as the General Land Office, Bureau of Reclamation, Geological Survey, Office of Indian Affairs, National Park Service, Bureau of Mines, Division of Territories and Island Possessions, etc.

AGRICULTURE. The Secretary of Agriculture is charged with acquiring and diffusing among the people of the United States useful information on subjects connected with agriculture in the most general and comprehensive sense of the term. For that purpose he conducts a comprehensive research and educational program. He is also required to administer many other Federal laws which relate to marketing and distribution of agricultural products; the regulation of interstate commerce in food, fiber and related products; the protection and management of the national forests, farm credit, agricultural adjustment, conservation and land use, farm tenancy, and rural rehabilitation and electrification.

COMMERCE. The Secretary of Commerce directs such activities as population, agriculture and other censuses; collection, analysis and dissemination of commercial statistics; promotion of foreign and domestic commerce; coastal and geodetic surveys; establishment of commodity weights, measures, and standards; supervision of the issuance of patents and the registration of trade marks; the establishment and maintenance of aids to air navigation; development of inland waterway transportation.

LABOR. The Secretary of Labor is charged with the duty of fostering, promoting and developing the welfare of the wage earners of the United States, improving their working conditions, and advancing their opportunities for profitable employment. He has the power to act as mediator and to appoint commissioners of conciliation in labor disputes whenever in his judgment the interests of industrial peace may require it to be done. He directs the collection and collation of statistics concerning conditions of labor; the promulgation and enforcement of certain maximum hour, minimum wage, child labor, safety and health stipulations in connection with Government supply contracts; the investigation of matters pertaining to children.

U. S. CABINET PERSONNEL

Department of State

Secretary of State—James Francis Byrnes
Undersecretary—Dean Acheson
Counselor of the Department—Benjamin V. Cohen
Assistant Secretary of State (for Economic Affairs)—William L. Clayton
Assistant Secretary of State (for European, Far Eastern, Near Eastern and African Affairs)—Vacant
Assistant Secretary of State (for Administration)—Donald S. Russell
Assistant Secretary of State (for Public and Cultural Relations)—William Benton
Assistant Secretary of State (for American Republic Affairs)—Spruille Braden

Department of the Treasury

Secretary of the Treasury—John W. Snyder
Undersecretary—Daniel W. Bell
Assistant Secretary in Charge of Monetary Research and Foreign Funds—Harry D. White

Department of War

Secretary of War—Robert P. Patterson
Undersecretary—Kenneth C. Royall
Assistant Secretary of War—Howard C. Petersen

Assistant Secretaries—Michael W. Straus; Oscar L. Chapman

Department of Agriculture

Secretary of Agriculture—Clinton P. Anderson
Undersecretary—J. B. Hutson
Assistant Secretary—Charles F. Brannan

Department of Commerce

Secretary of Commerce—William Averell Harriman
Undersecretary—Alfred Schindler
Assistant Secretary—William A. M. Burden

Department of Labor

Secretary of Labor—Lewis B. Schwellenbach
Undersecretary—Keen Johnson
Assistant Secretary—Daniel W. Tracy
Second Assistant Secretary—Edward C. Moran, Jr.

Minority Presidents

Source: Congressional Directory.

Nine presidents of the United States have been elected with a popular vote totaling less than fifty percent of the total vote cast. In only two cases, however, has the candidate receiving the largest popular vote failed to garner the majority in the Electoral College—Samuel J. Tilden in 1876 and Grover Cleveland in 1888. The "minority" presidents follow:

Year	President	Electoral	Popular vote
		Pct.	Pct.
1856	James A. Buchanan (D).....	58.7	45.3
1860	Abraham Lincoln (R).....	59.4	39.9
1876	Rutherford B. Hayes (R).....	50.1	47.9
1880	James A. Garfield (R).....	57.9	48.3
1884	Grover Cleveland (D).....	54.6	48.8
1888	Benjamin Harrison (R).....	58.1	47.8
1892	Grover Cleveland (D).....	62.4	46.0
1912	Woodrow Wilson (D).....	81.9	41.8
1916	Woodrow Wilson (D).....	52.1	46.0

The Presidential Succession

In case of the removal, death, resignation or inability of the president, the vice president succeeds. He is followed by the Secretaries of State, Treasury, War, Justice, Post Office, Navy and Interior, providing that they are constitutionally eligible.

Oath of Supreme Court Justice

"I do solemnly swear that I will administer justice without respect to persons, and do equal right to the poor and to the rich; and that I will faithfully discharge all the duties incumbent on me as Judge, according to the best of my abilities and understanding, agreeably to the Constitution and the laws of the United States."

May 22, 1621

Governor Edward Winslow of the Plymouth Colony married Susanna White, widow of William White, who died on February 21, 1621. This was the first recorded marriage in the New England Colonies.—F. P. A.

The Declaration of Independence was nearly captured by the British in 1812. This distinguished document narrowly escaped destruction many times and didn't find a permanent resting place until 1921 when it was put on display in the Library of Congress.—*Ency. Brit.*

Four Governors of New York became Presidents: Martin Van Buren, Grover Cleveland, Theodore Roosevelt, and Franklin D. Roosevelt. Three Governors of New York became Vice Presidents: George Clinton, Daniel D. Tompkins, and Theodore Roosevelt.

Congressional Committees

Source: Public Law 601—79th Congress.

Under the Legislative Reorganization Act of 1946, the number of standing committees of the Senate was reduced from thirty-three to fifteen and committees of the House of Representatives from forty-five to nineteen. This would be effective on January 20, 1947, opening day of the 80th Congress.

Federal Impeachments

Source: Congressional Directory.

The Senate has sat as a court of impeachment in the cases of the following accused public officials, with the result stated, for the periods named:

WILLIAM BLOUNT, Senator from Tennessee; charges dismissed for want of jurisdiction; December 17, 1798, to January 14, 1799.

JOHN PICKERING, Judge of the United States District Court for the district of New Hampshire; removed from office; March 3, 1803, to March 12, 1804.

SAMUEL CHASE, Associate Justice of the Supreme Court of the United States; acquitted; November 30, 1804, to March 1, 1805.

JAMES H. PECK, Judge of the United States District Court for the district of Missouri; acquitted; April 26, 1830, to January 31, 1831.

WEST H. HUMPHREYS, Judge of the United States District Court for the middle, eastern, and western districts of Tennessee; removed from office; May 7, 1862, to June 26, 1862.

ANDREW JOHNSON, President of the United States; acquitted; February 25, 1868, to May 26, 1868.

WILLIAM W. BELKNAP, Secretary of War; acquitted; March 3, 1876, to August 1, 1876.

CHARLES SWAYNE, Judge of the United States District Court for the northern district of Florida; acquitted; December 14, 1904, to February 27, 1905.

ROBERT W. ARCHBALD, Associate Justice, United States Commerce Court; removed from office; July 13, 1912, to January 13, 1913.

GEORGE W. ENGLISH, Judge of the United States District Court for the eastern district of Illinois; resigned office November 4, 1926; court of impeachment adjourned to December 13, 1926, when, on request of House managers, impeachment proceedings were dismissed.

HAROLD LOUDERBACK, Judge of the United States District Court for the northern district of California; acquitted; May 15, 1933, to May 24, 1933.

HALSTED L. RITTER, Judge of the United States District Court for the southern district of Florida; removed from office; April 6, 1936, to April 17, 1936.

Counting the Counties

There are more counties named Washington than any other—29 states have Washington Counties. Next are Jefferson, 26; Lincoln, 24; Franklin, 23; Jackson, 22; Adams, 12.—*F. P. A.*

Agriculture

The farmer in the dell,
The time he has is swell;
He listens to the radio sing
"The Farmer in the Dell."
—*F. P. A.*

HISTORY OF POLITICAL PARTIES

BY ARTHUR M. SCHLESINGER, JR.

The Founding Fathers did not anticipate the rise of political parties in the modern form; or, at least, the original sections in the Constitution governing the election of the President provided for electors acting as independent agents rather than for party voting. But the controversy over the adoption of the Constitution itself produced a division between the Federalists, who favored the formation of a strong central government, and the Anti-Federalists, who feared the possibly tyrannical effects of centralization. This division corresponded roughly to that between the financial, commercial and industrial interests, on the one hand, and the farming and planting interests, on the other; and, as James Madison pointed out in the tenth *Federalist* paper (1788), it was natural for such conflicting interests to serve as the foundation for political rivalries.

1

The parties which arose after the Constitution were derived in part from the division over the Constitution, though with important modifications. Madison and Thomas Jefferson, for example, favored the Constitution but assumed thereafter the leadership of the Anti-Federalist or Republican or, as it became later known, Democratic party.

The first great issues emerged over Alexander Hamilton's financial program. The policies of the Secretary of the Treasury were designed to give the new nation solid economic foundations and to interest the business classes in its continuing prosperity; but Hamilton's concrete program of funding the national debt and establishing the Bank of the United States benefited the business community at the expense, as the Jeffersonians believed, of the agricultural classes. Differences over the Federalist domestic program were aggravated by differences over foreign policy, where the Federalists, especially in their sponsorship of Jay's Treaty (1794), favored a pro-British policy while the Republicans sympathized ardently with the revolutionary government in France.

Washington himself strongly disapproved of the rise of party spirit, sought to harness it by keeping both Jefferson and Hamilton in his cabinet, and warned solemnly of its baneful consequences for the republic in his Farewell Address. Nevertheless, the very character of the executive office required him, in spite of himself, to identify himself with a party program. He chose the Federalist; and the resignation of Jefferson as Secretary of State in 1793 marked the first failure of non-party cabinet government, though the ideal was to linger as late as the presidency of John Quincy Adams.

After dominating the national government for its first twelve years, the Federalists were defeated in the election of 1800 and never recovered power. That election also revealed certain anomalies in the electoral process. The electors, voting strictly according to party choice and thus contrary to the anticipations of the Founding Fathers, cast the same number of votes for Jefferson and for Aaron Burr, the presidential and vice-presidential candidates of the Republican party; and the decision accordingly was thrown to the House of Representatives. To avoid such future situations, the Twelfth Amendment (1804) provided for separate ballots for President and Vice-President and thereby established the party system more firmly.

The Democratic-Republican party now entered a period of dominance. By the election of 1820 the Federalist party did not even bother to present a candidate against James Monroe; and it thereafter disappeared from the national scene. An important reason for this disappearance was the fact that the business classes no longer needed it; the Democratic-Republicans, particularly under Madison and Monroe, had retreated from the traditional Jeffersonian positions and were now enacting most of the domestic program of Hamilton.

2

All the rivals for the presidency in 1824—John Quincy Adams, Andrew Jackson, William H. Crawford, Henry Clay, John C. Calhoun—were nominally Democratic-Republicans. The bitter divisions during Adams's administration were based mostly on personal acrimony rather than on genuine issues. Jackson, however, after his election in 1828, began to advocate national policies, especially with respect to the United States Bank, which revived the distinction between the interests of the farming and laboring classes and the interests of the business community.

The consequence was the strengthening of the party system; indeed, modern American politics may be said to date from the Jackson administration. The right wing of the Democratic-Republican party, known first as the National Republicans and after 1835 as the Whig party, opposed Jackson with increasing vehemence in the name of the industrial and commercial classes. Its leaders were Henry Clay and Daniel Webster, and its function in American political life corresponded to that of the Federalists a quarter of a century earlier. The left wing of the Democratic-Republican party, soon to be known simply as the Democratic party, sought under the leadership of Jackson and Van Buren to vindicate and extend the Jacksonian policies.

Jackson transformed the conception of the presidency by employing more vigorously than any predecessor the resources of political leadership inherent in the office—both to organize a political party (the introduction of the “spoils system”) and to carry out a national policy. His resolution of controversies within the cabinet made clear (except during the brief life of the Tenure of Office Act, passed in 1867) that the job of the secretaries was to execute the policy of the President. The independence of the executive from Congress was further confirmed by the disappearance of the Congressional caucus, which from 1796 to 1824 had been the customary method for nominating presidential candidates. It was replaced first by nominations from state legislatures and then by party nominating conventions. The Anti-Masonic party held the first national convention in 1831, and in 1835 the Democrats established the practice by nominating Van Buren in a convention at Baltimore. The first “dark horse” candidate to sweep a convention was James K. Polk at the Democratic convention in 1844.

The Democrats in general favored a hard money financial policy, greater restrictions on private banking, the establishment of an independent treasury, the reduction of the tariff and limitations on nationally-financed internal improvements. After Van Buren's administration (1837–40), however, these traditional issues between the Democrats and Whigs began to dwindle before the issue of slavery. The older parties at first sought to ignore the slavery question. The result was the formation of the Liberty party in 1840 and growing restlessness within the two major parties. In 1848 anti-slavery Democrats joined with the Liberty party and some Conscience (anti-slavery) Whigs to create the Free Soil party, which Van Buren ran for the presidency. The Republican party emerged out of this coalition in 1854 to replace the Whig party, which had failed conspicuously to respond to the needs of the times and virtually disappeared after its bad beating in 1852. Progressively losing its Jacksonian character, the Democratic party by the late fifties was increasingly the party of the slaveholders.

3

The Civil War left the Republican and Democratic parties as the two great political parties. Under the impetus of its war record and of Democratic association with the Union, the Republican party stayed in power until the election of Grover Cleveland in 1884, taking over the role formerly occupied by the Federalists and the Whigs representing the interests of the business community in the national government.

Differences between the two parties did not assume a very fundamental form until

the rise of Grover Cleveland brought new Democratic emphasis on the low tariff and on civil service reform. In the meantime, the Populist party arose in the South and West in the late eighties as the vehicle for more radical aspirations. With the nomination of William Jennings Bryan by the Democrats in 1896, the Populists saw a major party adopt their issues, especially the demand for “free silver.” Following Bryan's defeat by William McKinley in the bitterly contested campaign of 1896, the separate Populist organization soon lapsed and was absorbed into the Democratic party.

The tensions of industrial society released after the turn of the century a swelling pressure for social change which found expression in both major parties. Under Theodore Roosevelt the Republicans made their last sustained attempt to act as a party of social reform. When the Republicans refused to renominate Roosevelt in 1912, he bolted to set up his own Progressive party; and the split elected Woodrow Wilson, who succeeded in recapturing most liberals for the Democratic party. Under Harding, Coolidge and Hoover, the Republican party proceeded to base itself more squarely than ever on the desires of the business community; and under Wilson and Franklin D. Roosevelt the Democrats resumed the role of militant opposition to business control laid down for their party by Jefferson and Jackson. While the current top Democratic leadership is less militant in this respect than the New Deal which preceded it, the 1946 primaries still indicate that liberals are more likely to be nominated by Democrats than by Republicans.

The American party system is basically a two party system, with one party customarily representing business interests and the other opposed to business domination. There have been, however, throughout American history a large number of “third parties” organized around other issues. The Anti-Masonic party (1830–38) was established to fight the supposed power of the Masonic societies; the Know-Nothing or American party (1849–56) opposed foreigners; the Prohibitionist party (1869–) denounced the sale of liquor. Where third parties have agitated urgent issues, as in the case of the Liberty and Free Soil parties, or the Populist party, they have seen the major parties take up these issues. The Republican party is the only instance, however, of a third party which became itself one of the two major parties.

At present, minor parties play a negligible role in American political life. The Progressive and Farmer-Labor parties, which represented independent agrarian sentiment in Wisconsin and Minnesota, have in recent years been re-absorbed in the Republican party. In New York the

American Labor and Liberal parties exert influence, but not beyond the state borders. Third party voting has declined in recent years to a point where in many states minor parties have not been able to meet ballot requirements. The leading minor parties today are the Socialist, a

reformist left-wing party; the Socialist Labor, a more militant party but still within the American radical tradition; the Communist, a party which identifies the interests of the American working class with the interests of the Soviet Union; and the Prohibitionist.

Candidates for President and Vice President

Election Results

1789 to 1924

The Constitution does not provide for the popular election of either the president or vice-president. It merely states that they shall be chosen by electors who shall be chosen in a manner prescribed by the state legislatures. No set of popular vote returns is complete or entirely significant until 1872, because that was the first election in which all electors were chosen by popular vote. Moreover, by referring to the returns in 1876 and 1888, it can be seen that the candidate with the largest number of votes need not necessarily be elected.

1789 to 1800

Year	Presidential candidates	Party	Electoral vote	Year	Presidential candidates	Party	Electoral vote
1789 ^{1,2}	George Washington	No party	69	1796	Thomas Jefferson	Dem.-Rep.	68
	John Adams	No party	34		Thomas Pinckney	Fed.	59
	Scattering	No party	35		Aaron Burr	Dem.-Rep.	30
1792 ¹	George Washington	Fed.	132		Scattering		48
1792	John Adams	Fed.	77	1800 ^{1,3}	Thomas Jefferson	Dem.-Rep.	73
	George Clinton	Anti-Fed.	50		Aaron Burr	Dem.-Rep.	73
	Thomas Jefferson	Anti-Fed.	4		John Adams	Fed.	65
	Aaron Burr	Anti-Fed.	1		C. C. Pinckney	Fed.	64
1796 ¹	John Adams	Fed.	71		John Jay	Fed.	1

¹In all elections prior to 1804, the candidate with the greatest number of electoral votes was President and the next highest was Vice President. Hence Washington became President and Adams Vice President.

²The New York legislature chose no electors. North Carolina and Rhode Island had not yet ratified the Constitution.

³Since Jefferson and Burr were tied, the House of Representatives chose the President. In a vote by states, 10 votes were cast for Jefferson, 4 for Burr and 2 were not cast.

1804 to 1832

	Votes not counted ⁸		23	Votes not counted		23

¹First election in which President and Vice President were voted on separate ballots.²Since no candidate had a majority of the electoral vote, the House of Representatives had to select a President from the first three, voting as states. Since 13 states supported Adams, only 7 supported Andrew Jackson, and 4 William H. Crawford, John Quincy Adams was elected President.³The Antimasonic Party in 1832 was the first party to hold a nominating convention to choose its candidates for President and Vice President.⁴Since Johnson did not have a majority of the electoral votes, the Senate chose him over Granger, the others being legally out of the race.⁵John Tyler became President upon the death of William H. Harrison on April 4, 1841.⁶Millard Fillmore became President upon the death of Zachary Taylor on July 9, 1850.⁷Andrew Johnson became President upon the death of Abraham Lincoln on April 15, 1865.⁸23 Southern electoral votes were excluded.

¹Horace Greeley died on Nov. 29, 1872 before his electors voted and so his 63 votes were scattered among many candidates. This was the first election in which every state chose its electors by popular vote.

²This election was disputed because of a double set of returns from La., S. C. and Fla., but a special electoral commission of 5 Supreme Court Justices, 5 Representatives and 5 Senators decided that the republican electors were the men legally chosen.

³Chester A. Arthur became President on death of James A. Garfield on Sept. 19, 1881.

⁴Theodore Roosevelt became President on death of William McKinley on Sept. 14, 1901.

⁵James S. Sherman, Republican candidate for Vice President, died on Oct. 30, and the Republican National Committee named Nicholas Murray Butler as Vice-Presidential candidate in his stead.

⁶Calvin Coolidge became President on death of Warren G. Harding on August 2, 1923.

Army and Navy Voting in 1944 Presidential Election

Source: U. S. Bureau of the Census.

(Includes voting by members of the armed forces, the merchant marine, the American Red Cross, and other organizations attached to and serving with the armed forces.)

The White House

The White House, the name applied both popularly and officially to the residence of the President of the United States, is located on the south side of Pennsylvania Avenue between the Treasury and the State Department buildings. The buildings consisting of the Executive Mansion, East and West terraces, and the Executive Office, together with the grounds cover an area of about sixteen acres.

The site was selected by President Washington and Major L'Enfant, the French engineer who prepared the plan for the Capitol city. The architect was an Irishman, by the name of James Hoban, then a resident of Charleston, S. C. The design of the Mansion proper is said to have been suggested by the Duke of Leinster's Palace in Ireland. The exterior is constructed of light gray sandstone from the quarries of Virginia, which were painted white during the rebuilding in 1815, the building having been fired by the British in 1814.

The White House was the first public building in Washington; the cornerstone was laid on October 13, 1792. However, the Mansion was not occupied until November, 1800, when President and Mrs. John Adams took over occupancy.

The rooms for public functions are located on the first floor, while the second floor is the President's apartments. The most celebrated public room is the East Room, where distinguished guests of the Nation are received and formal receptions take place. The walls of this room are covered with wood paneling and set in the

walls are twelve low relief panels done by the Piccirilli Brothers, noted sculptors who took their ideas from the Aesop Fables. The room is lighted by three massive crystal chandeliers and four bronze standards holding electric lights, which stand in the four corners of the room. From this room the body of President Roosevelt was carried to its last resting place at Hyde Park, N. Y.

Other public rooms are: the Red Room with its hangings of dark red silk damask; the Green Room, with its white marble mantel and curtains of green silk damask; the Blue Room, one of the most beautiful public rooms in America, is elliptical in shape, its wall covering of heavy corded blue silk. In this room the President receives foreign diplomats presenting their credentials. The State Dining Room is used for all formal dinners, the walls are of paneled oak, the ceiling of stucco and the curtains of heavy green velvet, the chandelier is made of silver.

The Executive Office is a three-story structure at the west end of the West Terrace. This was added to the original building in 1902 to accommodate the President's office staff and several additions have been made in recent years. In 1942 with the need of additional office space due to the war, a three-story structure was erected on the East Terrace. This is now the main entrance for the public and for all social functions held in the White House. The President's swimming pool and office are located in the West Wing.

*No apportionment was made in 1920.

Note.—The apportionment based on the Sixteenth Census (1940) distributes the 435 seats in the House among the States according to the method of equal proportions. By this method the percent difference between the average number of Representatives per million people in any 2 States is made as small as possible. Also, the percent difference between the average districts, i. e., the average number of persons per representative, in any 2 States is made as small as possible. By equalizing the representation of all pairs of States, the method gives as nearly equal representation as possible to all States in proportion to their population.

*In session until July 10, 1924.

†Nominated on 103d ballot.

February 3

Horace Greeley was a writing gent
And in '72 ran for President,
Though he should have told himself, "I
can't

Possibly beat Ulysses S. Grant."
Horace Greeley perhaps is best
Known for saying "Young man, go West."
And nobody is much astounded
That the New York Tribune was what he
founded.

—F. P. A.

Counterfeiters cheated the American
Public out of only \$48,000 in 1942, com-
pared with spoils of \$771,000 per year be-
tween 1933 and 1936. A counterfeit bill can
often be detected by comparing it with a
genuine bill of the same denomination,
paying special attention to the quality of
the portrait, which is unusually fine in a
genuine bill. Counterfeit coins usually feel
greasy or slippery.—*Encyc. Brit.*

Speakers of the House of Representatives, 1789 to 1946

Make-up of Congress

The Senate

Number—Ninety-six, two from each state.

Term—Six years; one-third of the membership is elected each two years.

Eligibility—Any person who is thirty years of age or more and has been a citizen of the United States for nine years can be elected to the Senate.

Salary—\$12,500 annually, plus \$2,500 expense allowance.

Term—Two years, the term of all members beginning and ending concurrently.

Eligibility—Any person who is twenty-five years of age or over and has been a citizen of the United States for seven years can be elected to the House.

Salary—\$12,500 annually, plus \$2,500 expense allowance; \$20,000 annually for the Speaker.

Sessions of Congress

House of Representatives

Number—435 members. Puerto Rico, Hawaii and Alaska each have one territorial delegate, who has no vote.

Each Congress begins on January 3 of the odd years and continues for two years. Special sessions are at the call of the President.

The Forty-eight States

Source: "Information, Please" questionnaire to state historians.

Origin of state name	Area, sq. mi.	Area rank	Population	Pop'n. rank	Date and rank of admission	Nickname	Flower	Motto

STATES AND TERRITORIES

BY JOHN G. ROGERS

THE FORTY-EIGHT STATES

Alabama

Alabama ranks fourth in cotton growing but cotton has not been king there for many years. The state is the biggest heavy industry state in the South. It ranks third in iron mining, fourth in lumbering and eighth in coal mining. Cotton goods, iron and steel and saw mill products lead Alabama's manufacturing which is centered in the 541 mills, mines and factories in and around Birmingham, "the Pittsburgh of the South." This city of more than 270,000 population did not even exist in 1870.

Alabama grows more nuts than any state except Georgia, and is high in corn, hay and sweet potatoes. Montgomery, the capital, is a U. S. leader in making commercial fertilizer. Mobile, the only seaport of consequence, is a busy shipper of raw cotton, iron and steel, and hardwood lumber from the slopes of the Alleghenies.

Alabama's Negro population, just under a million, is the third largest in the Union. At Tuskegee Institute, founded by Booker T. Washington, Dr. George Washington Carver carried out his famed agricultural research. Muscle Shoals, on the Tennessee River, provides a great electric power resource.

Hernando De Soto and his treasure seekers first saw Alabama in 1540. Subsequently it was under French, British and Spanish ownership. The Confederacy was founded at Montgomery in February of 1861, and for a time the city was the Confederate capital. Alabama is consistently Democratic in politics.

Arizona

Mining leads the industries of Arizona which ranks first in copper, second in gold, third in vanadium and fourth in silver. The smelting and refining of copper is far and away the state's principal manufacturing activity. Irrigation—only three states spend more on artificial watering than Arizona—is vital to its agriculture. In land once arid and useless, the state grows cotton, corn, wheat, sorghums, citrus fruit and vegetables. Expanded irrigation promises much for Arizona where crops grow so quickly that alfalfa can be cut four to seven times a year.

Phoenix, the capital and largest city, is both a popular health resort, and a busy shipper of cotton and vegetables. Tucson, too, is a vegetable shipper, and Douglas exports copper and loads cattle off to market centers. Spaniards in the sixteenth

century were the first white men to breathe the dry, bracing air of Arizona, to look over its mountains, deserts, canyons and valleys.

With the Hopi, Navajo and Apache tribes, Arizona has the second largest U. S. Indian population. It also has some of the country's most famous scenery. In the north is the Grand Canyon of the Colorado River, with a magnificent breadth of from four to eighteen miles, rich not only for beauty but also for geological records many hundreds of centuries old. In the east is the Petrified Forest—pine and cedar trees turned to stone by the action of mineral-laden waters. Entering on Feb. 14, 1912, Arizona was the last state to join the Union. In politics, Democrats have prevailed by a two-to-one margin.

Arkansas

About 90 percent of the nation's bauxite—the source of aluminum—comes from the earth of Arkansas which also contains North America's only known diamond mine and a versatile set of hot mineral springs owned and operated by the Federal government. Mostly flat with the Ozark Mountains rising in the west, Arkansas has an equable southern climate and fertile central valleys in which crops mature three to four weeks ahead of schedule. The state ranks third in growing cotton and rice, also raises wheat, corn, oats, potatoes and fruit. It stands eighth in oil production, and eighth in lumbering, with hardwoods the principal output. Arkansas is first in producing whetstones and antimony ore.

Little Rock, the capital and largest city, stands in the bauxite country, and is a processor of cotton seed and lumber. Pine Bluff has one of the biggest U.S. archery factories and is a busy cotton shipper. Fort Smith handles cotton and makes glass and furniture. Hot Springs, with only about 20,000 population, entertains 300,000 guests a year. Its forty-seven famous mineral springs, the only ones administered by the Federal government, are in Hot Springs National Park in the Ouachita Mountains. The curative waters range from 95 to 147 degrees in temperature and once were fiercely contested for by Indian tribes which believed that the Great Spirit was distilled therein. Hernando De Soto, probably the first white man to see Arkansas, explored the area in 1541. In politics, the state is consistently Democratic.

California

California, celebrated for cinema and sunshine and stretched along nearly two-thirds of the U. S. Pacific Coast, is one of the nation's economic giants. It collects more money from raising food and catching fish than any other state, and it stands second in oil production, third in lumbering and seventh in manufacturing. Irrigation, in which California leads the country, makes possible the big crop harvest consisting of virtually every kind of fruit and vegetable, and corn, wheat, sugar beets, walnuts and almonds. Cotton growing is increasing. California stands first in growing grapes and in making wines and brandies.

Ranging from a sub-tropical south to a temperate north with snow-capped mountains, California is broken lengthwise by the Coast and Sierra Nevada Mountain Ranges, with the fertile San Joaquin and Sacramento Valleys lying between. Nature is spectacular in California. Death Valley, toward the southeast, is 276 feet below sea level, the lowest spot in the nation. Seventy miles to the north is Mt. Whitney, a 14,496-foot peak, the highest point in the United States. California's Lassen Peak is the only active U. S. volcano, and one of the state's giant redwoods, the General Sherman Tree in Sequoia National Park, is estimated to be 3,500 years old.

Juan Rodriguez Cabrillo, a Spanish explorer, in 1542, was probably the first white man to touch California. The state's settlement boom began in 1849, a year after gold was discovered at Sutter's Mill on the American River. In the next twenty years about a billion dollars in gold was mined. Gold is still found in California but the most important mineral products are oil, natural gas, sand and gravel, lead, tin and cement, in all of which the state ranks very high.

Los Angeles, the fifth largest U. S. city and tenth busiest U. S. airport, makes furniture, autos, clothing, tires and oil products. Hollywood, part of Los Angeles, is the motion picture capital of the world. San Francisco, the eighteenth U. S. seaport, refines oil, builds ships, packs meat and cans vegetables, and also makes tin and steel products. San Diego and Long Beach are big plane-making centers. Sacramento, the capital, cans fruit and vegetables. Berkeley makes soap, ink, engines, pumps and fertilizer. Pasadena is the famed home of the annual Tournament of Roses at New Year's time.

California's four national parks are great tourist attractions and the San Francisco-Oakland and Golden Gate Bridges are among the world's engineering marvels. The state is second to Texas in

railroad mileage. In politics, California fluctuates between Democrats and Republicans.

Colorado

Colorado, the most elevated state in the nation, began settlement with a gold rush near Denver in 1858, but for about the last thirty years the state has been predominantly agricultural. Wheat, hay, beans, sugar beets, corn, potatoes, barley and truck vegetables head the crop list. In the West, only California and Washington surpass Colorado in crop value. In the nation, only California surpasses Colorado in irrigation investment. The state's coal reserves are seventh greatest. Gold and silver still are mined, and the state leads in extracting vanadium and molybdenum.

Denver, the capital, is the financial and commercial capital of the Rocky Mountain region, with no other large city for 500 miles in any direction. It is the fourth U. S. insurance center and has the world's largest sheep market. Pueblo, "the Pittsburgh of the West," makes iron, steel, brick, tile and foundry products. Greeley has flour and beet sugar mills. Colorado Springs, perhaps the most popular tourist center in the Rocky Mountains, lies near Pikes Peak, the Garden of the Gods and the Cave of the Winds. From its eastern plains area, Colorado climbs westward to many peaks over 14,000 feet. Mount Evans Highway is the highest auto road in the world, and 1,053 feet over the Royal Gorge of the Arkansas River is the highest suspension bridge in the world. The state ranks fifth in national forest area. In politics, Colorado shifts between Republicans and Democrats.

Connecticut

For its early brilliance in turning out firearms and ammunition, Connecticut won the title of "Arsenal of the Nation." And from gun making, with accurate measurement a prime factor, the state went on to develop the U. S. leadership in mass production in precision manufacturing. Though Connecticut is 46th in size, 31st in population, it ranks fourteenth in manufacturing and contains two of the nation's first twenty-two industrial areas.

Connecticut's main cities and a few of their main products: Bridgeport—arms, ammunition, sewing machines, airplanes; Hartford, the capital—arms, typewriters, plane motors; New Britain—hardware, cutlery, edged tools; New Haven—arms, ammunition, hardware, clocks; Stamford—locks, typewriters, pottery, machinery; Waterbury—brass products, in which it leads the nation; and Danbury—hats.

Hartford, which has the oldest U. S. newspaper, "The Courant," established in 1764, is the insurance capital of the na-

ion. Every day its companies receive a total of \$2,000,000 in cash premiums.

Hilly in the east and west, with a broad central plain, Connecticut devotes its farming mainly to dairying, fruit growing and poultry raising. It stands ninth in tobacco growing and no crop in the nation receives as high a price per acre as Connecticut shade-grown tobacco. Truck gardening is extensive.

Connecticut is a popular resort state, both for its beaches on Long Island Sound and for its inland lakes and forested hills. The southwest part of the state is a suburban area of New York City. Dutch traders from Manhattan began the settlement of Connecticut near Hartford in 1633, and later the English came in from Massachusetts. Their constitution, the Fundamental Orders of 1639, is probably the first written democratic charter. In Connecticut politics, Republicans have held a slight edge.

Delaware

Little Delaware, smuggling against Delaware Bay at the lowest mean elevation of any state, grows a great variety of small fruit and vegetables and is a U. S. pioneer in the industry of food canning. One of the country's oldest and largest canneries is at Dover, the capital. Peaches, strawberries, apples, corn, wheat, hay and truck vegetables are the leading crops. Fishing in the bay and in the Atlantic Ocean is an important industry. Delaware's chicken farms are one of the great supply sources for the big markets of the East.

Wilmington, the home of E. I. du Pont Nemours & Company, has about half the state's population, does about two-thirds of its manufacturing, including chemicals, leather goods, machine products, hardware, textiles and ships. The first U. S. iron steamship was built on its ways in 1836.

Henry Hudson discovered Delaware Bay in 1609, and the Dutch started settlement in the area in 1631. After the Indians wiped out the Dutch, Delaware was under the Swedish flag for a time. Kaolin clay, mined in the north, is the state's only mineral of consequence. Under a law of 1711, Delaware still maintains the whipping post as punishment for some crimes. Democrats and Republicans give and take with about equal success in Delaware.

Florida

Agriculture is Florida's biggest steady pursuit, but hotel statistics point the way to its chief fame—the resort and tourist business. Though only middling in size and population, Florida has 848 hotels, a number exceeded only by New York and California. Along its 1,416-mile coast line, the longest of any state, dozens

of communities more than double in population during the winter season when northerners flee the snow and cold.

Oranges and grapefruit lead Florida's crop list, then come tomatoes, peanuts, corn, celery and potatoes. The state's truck gardens are early and large suppliers of northern tables. Florida is tenth in commercial fishing. Deep sea fishing for sport is a leading tourist hobby. Florida is the U. S. leader in mining and shipping phosphate rock.

Florida's low elevation, second lowest among states, is dotted by some 30,000 small lakes, and the dismal Everglades swamp in the south. Tallahassee, the capital, at 216 feet, is a high place in Florida. Tampa is one of the largest cigar manufacturers, Miami is a busy fruit shipper. Jacksonville ships lumber and turpentine, two of the state's leading products. St. Petersburg has long been popular as a winter resort. Ponce de Leon first saw Florida in 1513, seeking the Fountain of Youth. St. Augustine, founded by Spaniards in 1565, was America's first city of European origin. Florida is consistently Democratic in politics.

Georgia

Georgia, the largest state east of the Mississippi, is typical of the changing South. The value of its factory products has overhauled and passed the value of its farm products, and industrialization is ever increasing. Atlanta, the capital, largest city and the leading commercial and financial center of the Southeast, is achieving importance as an automobile maker. Cotton and lumber products, fertilizer, processed food and a great variety of other items are among the factory output of Macon, Augusta and Savannah.

Georgia ranks first in sea island cotton, sixth in all cotton and sixth in tobacco. It is first in peanuts and pecans and grows four times as many commercial nuts as any other state. Georgia's peaches are nationally famous. Georgia is fifth in lumbering. From its vast stands of pine come more than half of all U. S. resin and turpentine, and Savannah is the world's biggest market for naval stores. Second in the mining of mica, the state is one of the U. S. leaders in the value of its clay products. Cattle grazing is extensive. Georgia marble is widely exported.

Hernando De Soto, a Spaniard, in 1540 first looked over the red clay of Georgia, sloping upward to the Blue Ridge Mountains in the north and northwest. James Oglethorpe began settlement in 1732, founding a British colony as a refuge for debtors and seekers of religious freedom. Sherman burned Atlanta and devastated a great slice of Georgia in the Civil War.

At Warm Springs is the infantile paralysis foundation founded by President Franklin D. Roosevelt who died there on April 12, 1945. Georgia is consistently Democratic in politics.

Idaho

Idaho's huge investment in irrigation—the third largest in the nation—has put its agriculture well ahead of its mining. Idaho potatoes are eaten everywhere. Near Mesa is the world's largest individually-owned fruit orchard. The state ships more apples than any state except Washington, and grows many other fruits, wheat, corn and barley. Boise, Pocatello, Idaho Falls, Nampa and Twin Falls—all are busy shippers of produce, meat and wool. There is light diversified manufacturing and Pocatello has a cheese factory with a world market.

Lewis and Clark visited Idaho in 1805, but real settlement began with the gold strike of 1860. Idaho mines gold, silver, lead, zinc, copper and tungsten, and still has vast undeveloped mineral wealth. In its rugged central mountains is an area several times the size of Switzerland that is reachable only by pack horse. Until a few years ago it was impossible to motor between north and south Idaho without detouring through Oregon and Washington.

Tourist trade is important to the state. Hunting and fishing are excellent. Sun Valley is a famed winter resort. Shoshone Falls on the Snake River is forty-six feet higher than Niagara, and Hells Canyon of the Snake is much deeper than the Grand Canyon. Boise has recorded the highest U. S. temperature—121 degrees above zero. Politically, Idaho switches back and forth, with Democrats holding a slight edge.

Illinois

Illinois anchors the Midwest like a rich giant, versatile in every big wealth-making industry. It stands third in manufacturing, third in coal mining, fourth in farm cash income, sixth in oil production. The sprawling Chicago district (including a slice of Indiana) is a close second to Pittsburgh's area in iron and steel production. Chicago, proper, leads the nation as a meat packer and grain exchange, is the second city in commerce, manufacturing and population.

Transportation alone makes Illinois stand out. Chicago is the largest U. S. rail center, the busiest long-flight airport city, the fourth busiest Great Lakes port. The state as a whole is third to California and Texas in railroad track mileage. The Wabash, Ohio and Mississippi Rivers are much used water routes.

As a farmer, Illinois stands first in soy beans, second in corn, third in oats. Its fertile flatness—it is the third most level state—also grows wheat, barley, rye, potatoes, hay and truck vegetables. It is near the top in hog raising, and dairying is an important industry. Bituminous coal underlies more than half the state, which leads in production of peat. Prospectors still are finding new oil pools to tap. The Illinois sand and gravel business is exceeded only by that of California. Fluorspar, iron ore and primary zinc also are mined.

Illinois manufactures just about everything. Besides packing meat and forging steel, Chicago makes railroad cars, clothing and a host of other products. Rockford makes furniture. Peoria is famous for tractors and liquor. Moline makes farm implements. Elgin makes watches. The biggest government arsenal in the world stands on a Mississippi island off Rock Island. East St. Louis, a major U. S. rail and stockyard center, makes chemicals, bottles, railroad equipment, and products of brick, tile, oil and aluminum. Springfield, the capital, where Abraham Lincoln lived and is buried in Oak Ridge Cemetery, makes electric meters and heavy road-building machinery.

French traders and missionaries, late in the seventeenth century, were the first white men in Illinois. Marquette and Joliet, in 1673, were the first known explorers. Politically, Illinois is divided. Chicago, where nearly half the population lives, is controlled by a Democratic machine. Downstate Illinois is generally Republican.

Indiana

Indiana's fifty-mile waterfront on Lake Michigan is one of the great industrial centers of the world, turning out iron and steel and oil products that lift this otherwise largely agricultural state to ninth place in U. S. manufacturing. The component cities—East Chicago, Gary, Hammond and Whiting—have some of the world's largest industrial plants, and their great output is further swelled by the inland factories of South Bend, Indianapolis, Fort Wayne, Evansville and Terre Haute. The list of products is endless—automobiles, farm implements, aviation and railroad equipment, sewing machines, machinery of all kinds, and tons of raw steel—all made from Great Lakes iron ore.

As a miner, Indiana ranks sixth in coal, and high in limestone which is shipped over the nation and abroad. As a farmer, Indiana stands third in soy beans, fourth in corn, thirteenth in tobacco, high in onions, also grows wheat, oats, rye and tomatoes. The canning of vegetables and juices is an important industry, and the

state produces two-thirds of all U. S. peppermint and spearmint oil.

Level in the north, Indiana climbs to a hilly south, into the limestone area where Wyandotte Cave is the second largest U. S. cavern. Indianapolis, the capital, is the largest U. S. city not on a navigable body of water. Its site, in the state's middle, was determined when Congress gave Indiana the specified area in which to build its capital in 1816. French Lick and West Baden are mineral spring and resort centers. French traders, in the early eighteenth century, explored Indiana first. Over the years, Republicans have held an 8 to 5 edge over the Democrats in Indiana.

Iowa

Iowa stands in a class by itself as a producer of corn and hogs. The state's leadership in those departments often brings it the largest agricultural income in the nation. Ninety percent of the state is under the plow and the fertility of its soil is unsurpassed anywhere. It ranks second in oats and soy beans, also grows hemp, hay, popcorn, timothy, fruit, nuts and vegetables in great quantity. Its hens lay more eggs than any other state's.

Meat packing, centered in Sioux City, is the top manufacturing industry. Des Moines, the capital, leads the world in publication of farm journals, is one of the chief U. S. insurance centers, Cedar Rapids and Waterloo are busy food processors. Muscatine is the largest U. S. maker of pearl buttons. Council Bluffs, with only about 40,000 population, is the fifth U. S. mail center. Other Iowa factory products are farm implements, washing machines, mountain pens, and railroad and auto equipment. Coal mining runs to 4,000,000 tons a year.

Marquette and Joliet, Frenchmen, first explored Iowa in 1673. One hundred and fifteen years later Julien Dubuque named the first settlement after himself. German and Scandinavian stock dominates in Iowa and the state is usually Republican in politics. Iowa has the lowest U. S. illiteracy rate. With more than 9,000 track miles, it is fourth as a railroad state. The first Mississippi River railroad bridge went up at Davenport in 1853, and the Palmer School of Chiropractic, first in the country, was founded there in 1903. Herbert Hoover, the first President from west of the Mississippi, was born in the Iowa hamlet of West Branch.

Kansas

First in wheat, first in flour milling, fifth in oil, close to the top in cattle, flat fertile Kansas lies in the U. S. geographical center. In the east, where Kansas City stands second only to Chicago in slaughtering

and meat packing, is midwest corn country with small farms. In the west, where Dodge City once was a roaring, lawless cattle town, is the short-grass prairie land, rich for grazing, richer still for winter wheat. Corn, sorghums, oats, barley, soy beans and potatoes are other crops. Besides oil, Kansas gets zinc, coal, salt and lead from its earth.

In some years a tenth of the nation's meat packing is done in Kansas City, which adjoins Kansas City, Mo. The city handles ten million head of livestock a year, has the world's largest grain elevator, and is the U. S. leader in producing hog serum and black walnut lumber. Topeka, the capital, and Wichita also are busy meat packers and flour millers.

Fossil beds show that giant reptiles once roamed over Kansas. Spanish Coronado saw the area first in 1541 in his vain search for the mythical city of Quivira. Three hundred years later Kansas was a bloody battleground over slavery. John Brown killed slavers there before he went east to more ambitious projects. Kansas is one of the three states which prohibit the legal sale of hard liquor. Its vote is normally Republican.

Kentucky

Some of the nation's best tobacco, horses and whisky come from the gentle slope of Kentucky, running down to the Mississippi and Ohio Rivers from its mountains in the east. The state stands first in the production of native asphalt and hemp, second in growing tobacco, fourth in mining coal and making tobacco products, tenth in corn and oil, high in hemp. Wheat, oats and cotton also are grown.

Louisville, the largest city, famed for the Kentucky Derby at Churchill Downs, makes whisky, furniture, cigarettes and aluminum ware. Lexington is a big tobacco market and stands in the Blue Grass country, a principal U. S. center for breeding fine race and saddle horses. Frankfort, the capital, makes brooms, shoes and lumber products. Covington makes X-ray machinery, textiles, iron and steel products. Owensboro is a large tobacco market with diversified manufacturing. Besides coal and oil, Kentucky's important minerals are natural gas and quarry products.

Marquette and Joliet, French explorers, in 1673 first saw Kentucky when it was "The Dark and Bloody Ground," fiercely contested by Indian tribes. Daniel Boone explored the country in 1760. Mammoth Cave, in the central portion, is one of the nation's natural wonders, with passages twisting for miles under the earth. The house in which Stephen C. Foster wrote "My Old Kentucky Home" is still standing near Bardstown in a state park. The

cabin in which Abraham Lincoln is believed to have been born is preserved in a national park near Hodgenville. Kentucky is usually Democratic, though Republicans win at times.

Louisiana

Semi-tropical Louisiana, astride the mouth of the Mississippi, leads the nation in fur trapping. In some years its rich bag of mink, muskrat, opossum and raccoon is a greater pelt total than that of Canada and Alaska combined. The state, which calls its counties parishes after the old Spanish religious divisions, is high in other production—first in growing rice, sugar cane and sweet potatoes, and in shrimp fishing; second in sulfur, third in oil, fourth in salt, ninth in cotton, eleventh in lumber. In all commercial fishing, it is seventh.

Louisiana's lowest land is below sea level, and lower than any U. S. spot except Death Valley. New Orleans, the sixth busiest U. S. seaport and home of the Mardi Gras, avoids flooding only by an expensive levee and spillway system, and the world's largest concentration of drainage pumps. New Orleans' industry is steadily tending to make increased use of raw materials from South and Central America. Baton Rouge, the capital, produces chemicals and synthetic rubber, and has one of the world's largest oil refineries. Shreveport refines oil and makes fertilizer. Monroe makes paper, ink and lumber and brick products.

Some of the state's cotton, rice and sugar cane grows on the "trembling prairies," springy coastal marshlands protected by dikes. Corn, truck vegetables, citrus fruit and pecans are other products. Hernando De Soto, in 1540, was probably the first white man to see Louisiana. In politics, the state is steadily Democratic.

Maine

When the sun rises in the morning, the first spot in the nation to feel it is the peak of Mount Katahdin, rising 5,273 feet in central Maine. This state at the northeastern tip of the country is the U. S. leader in growing potatoes, in producing pulp and paper. It also is supposed to be a political barometer. While all other states hold general elections in November, Maine votes in September, giving rise to the adage, "As Maine goes, so goes the nation." It is not always true. Maine is almost invariably Republican.

Virtually all of Maine's manufacturing cities make paper or pulp products. In addition, Augusta, the capital, makes cotton goods and shoes. Portland, the largest city, makes textiles, cans sardines and blueberries. Canning and the making of

cheese and canoes are important in the Bangor area. Textiles, sheeting and ging-ham come out of Lewiston's mills. Tanneries, machinery works and boot and shoe plants are scattered along the state's rivers.

Samuel Champlain, the French explorer, looked over Maine's rugged, forested area in 1604, but the Cabots had visited the region a century before. Settlement began three years later and Maine was first in the English colonies here to build a church, a ship and a blockhouse. After the potato, crops are hay, oats, buckwheat and apples. With 2,465 lakes, hundreds of streams and a bracing summer climate, Maine is famous as a resort state. Fishing is excellent and deer, bear and other game are plentiful.

Maryland

In some years, one out of every three cans of tomatoes opened in the United States comes from small, odd-shaped Maryland which is almost cut in two by the upthrust of Chesapeake Bay. The state is a leader in all vegetable canning, and is one of the largest chicken raisers in the East. With nineteen streams in its small area, Maryland has more river frontage than any other state. Baltimore, well up Chesapeake Bay, is the nation's third busiest seaport, and a national leader in the surety or bonding business. Maryland holds fifteenth place in U. S. manufacturing. Baltimore makes planes, steel, clothing, fertilizer, chemicals and is a big meat packer. Frederick is a center of flour milling, vegetable canning and butter making, and also turns out electrical machinery. Cumberland and Hagerstown have diversified manufacturing. Annapolis, the capital, is the site of the United States Naval Academy.

Low and flat on the Atlantic Ocean and Chesapeake Bay, Maryland rises to a mountainous west. In tobacco growing, the state ranks tenth and, in addition to all kinds of vegetables, it grows wheat, hay, corn, potatoes and barley. Coal, sand and gravel, cement and stone are the leading mineral products.

Maryland's settlement began in 1634 at St. Mary's under an English charter to Lord Baltimore. The state capitol, built in 1772, is the only one besides that of Massachusetts to antedate the Revolution. Maryland still retains the whipping post for punishment of some crimes. Democrats hold the edge in Maryland politics.

Massachusetts

From the beginning of American history, Massachusetts has led the nation in the making of textiles, and Boston, the capital, has been the biggest U. S. wool market. Until recently, when California moved in

t the top, Massachusetts held an unbroken lead in commercial fishing. In all manufacturing, the state stands in eighth place and despite the great dominance of textiles, its factories are famous for a great variety of products. Within its borders are four of the twenty-seven busiest U. S. industrial areas.

Lynn has been making boots and shoes since 1636. Waltham, the site of the first U. S. power loom, became notable for watch making. Cambridge turns out soap, candy and machinery. Worcester makes machine tools and wire products. Springfield is a big small arms producer for the Army, and also makes motor vehicles and electrical machinery. Lawrence is the nation's biggest worsted cloth center. Fall River makes clothing and Lowell has 400 plants of diversified output.

Massachusetts, fairly level and rising to the Berkshires in the west, was possibly looked over by Eric the Red and his Norsemen as early as 1000. The crossing of the Mayflower and the landing of the Pilgrims in 1620 began its long and significant role in U. S. history.

Boston, the ninth U. S. city in size, and the ninth busiest U. S. seaport, is especially rich in historical lore. It was a prime mover in the Revolution during which Faneuil Hall became known as "The Cradle of Liberty." From the tower of Christ Church, on Copp's Hill, were flashed the lanterns that began Paul Revere's celebrated ride. And the Battle of Bunker Hill was fought at Boston.

In the glory of the old whaling days, New Bedford and Nantucket were famous ports. Both still are big fishing ports, although first place in the state's commercial fishing shifts between Boston and Gloucester. In some years Massachusetts leads the nation in growing cranberries. Other crops are tobacco, potatoes, wheat, corn, oats, buckwheat and apples. Maple syrup and sugar are made in good quantity. Massachusetts granite and marble are used all over the nation. Employment in Massachusetts factories was long a strong magnet for European immigration, and Boston, in particular, has a large Irish population. Over the years, Republicans held the edge in the state's politics.

Michigan

On the map of Michigan, draw an eighty-five-mile circle around Detroit and it will contain the home plants of the companies that make nine out of ten American automobiles. The vast auto industry which began fifty years ago out of Michigan's carriage-building business puts the state first in manufacturing, makes Detroit the third U. S. industrial center. Flint and Pontiac share the auto honors with De-

troit. Dozens of other communities make parts or bodies.

Michigan's diversified industry also is great, ranging in output from airplanes to flypaper. Grand Rapids is the U. S. furniture center. Lansing, the capital, makes Diesel engines, hoists and pumps. Bay City makes cigars and heavy machinery. Saginaw makes sugar and boilers. The state leads in making refrigerators, stands third in drugs and medicines.

First explored by French Jean Nicolet in 1634, Michigan is the only state split completely in two large parts. The north peninsula, between Lakes Superior and Michigan, is mining and timber country. The southern one, between Lakes Michigan and Huron, is agricultural and manufacturing country.

Connecting Superior and Huron is the busiest canal in the world—the Sault Ste. Marie. During eight months of the year it handles more than a hundred ore and grain ships each day. Two of its five locks are the world's longest.

Michigan is great for more than factories. It is the U. S. leader in salt-making. It is second in mining iron ore. It once led in copper, is now sixth, but its copper ore is still richest per pound.

Rugged and forested in the north, the state slopes down to fertile farm areas. It ranks second in growing dry beans, fourth in grapes and peaches, seventh in potatoes, high in sugar beets. Its 6,000 inland lakes and 2,300 miles of Great Lakes shoreline make it a good vacationland. Over the years, Republicans have held a strong edge in Michigan politics.

Minnesota

A few square miles in northern Minnesota contain perhaps the most precious of U. S. natural resources. The Mesabi, Cuyuna and Vermilion Ranges pour out from 60 to 70 percent of all the nation's iron ore. The shipping of the rich material makes the Lake Superior port of Duluth (with Superior, Wis.) the second busiest U. S. port, its tonnage exceeded only by New York.

Farm and factory are equally important in Minnesota. It is first in growing oats and making butter, second in eggs and milk, near the top in farm cash income, high in corn, wheat, potatoes, rye and barley. Minnesota was once important in lumbering but greedy exploitation ruined its forests for commercial production. It is a great summer resort state with more than 11,000 lakes, one of them being Lake Itasca, the source of the Mississippi.

Minneapolis, the chief business center of the northwest, is one of the nation's largest flour millers, and also makes electric machinery, furniture and foundry

products. St. Paul, the capital, is the world's largest publisher of law books, and is a leader in advertising specialties. South St. Paul is a U. S. leader in stockyards capacity. Meat packing and food processing are important in many communities. Minnesota, with its southern half a rolling plain, was first seen in about 1655 by Radisson and Groselliers, French traders from Canada. Scandinavian elements predominated in its settlement. The state is famous for its lake fishing, and deer, bear and fur animals are still plentiful in the forested north. In politics, Minnesota is usually Republican.

Mississippi

Mississippi, one of the least industrial of states, is a stronghold of the Old South. Many of the old plantations remain intact and the world's largest cotton plantation, of 35,000 acres is at Scott. The state is one of the two in the nation in which more than half of the population makes a living directly from the soil. It ranks second in cotton, also grows corn, peanuts, oats, pecans, sugar cane. It stands sixth in lumber production. Oil is a recent but increasingly important product.

Despite its agricultural character, Mississippi reflects the southern trend toward industrialization. Since 1933 the value of its factory products has increased about 450 percent; the number of factories, 100 percent; factory wages paid, 575 percent. Jackson, the capital and largest city, makes cotton, iron and lumber products. Vicksburg refines oil. Laurel is the home of the Masonite Corporation, has the world's only sweet potato starch plant. Meridian and Greenville make cotton goods.

Hilly in the east, the state slopes toward the Mississippi River. Spanish Hernando De Soto first saw it in 1540. It supplied a turning point in the Civil War when Grant took Vicksburg on July 4, 1863, at terrific cost. Of 16,653 Union graves in Vicksburg National Military Park, 12,912 are marked "unknown." Mississippi was first to ratify the 18th amendment, is one of the three states which ban the sale of hard liquor. It has the second largest U. S. Negro population. In politics it is overwhelmingly Democratic.

Missouri

Missouri touches both South and North, ranks high in both farm and factory, and leads the nation in mining lead, making corn cob pipes and breeding mules. Corn, wheat, oats, barley, sorghums, potatoes, tobacco and cotton grow on its fertile table land which climbs to the Ozark Mountains in the southwest. The state is fourth in production of eggs, fourth in mining zinc and fifth in growing soy beans.

The industrial might of Kansas City and St. Louis lifts Missouri into thirteenth place as a manufacturing state. The ninth U. S. industrial city, St. Louis, assembles and makes automobiles, shoes, drugs, chemicals, beer, street cars, and is one of the largest U. S. fur markets. Kansas City, which adjoins Kansas City, Kan., makes steel and flour, packs meat, refines oil, and is the second largest U. S. horse and mule market. St. Joseph and Jefferson City, the capital, are busy at diversified manufacturing. Cement is an important Missouri product.

St. Louis and Kansas City both are among the great U. S. rail centers. The Eads Bridge, over the Mississippi at St. Louis, is said to handle more freight cars than any other bridge in the world.

The French explorer, La Salle, first saw Missouri in 1682. Mississippi River traffic, still in big volume to St. Louis today, was a big factor in settlement, in which German stock predominated. The homes of two of Missouri's most publicized sons—Mark Twain and Jesse James—are well-visited tourist attractions. In politics, Missouri runs to the Democratic side, with occasional Republican inroads.

Montana

Montana's history is the old Western story—there were few settlers until a gold strike in 1858, after which they came in rapidly. Today the state takes lead, zinc, silver, coal and oil from the earth, but copper is the big cash mineral product. Butte, the largest city, sits on "the richest hill in the world," made of mines which once supplied half of U. S. copper. Anaconda has the world's largest non-ferrous reduction plant, and Great Falls, too, is a copper refiner. Billings has large beet sugar factories, and is a big shipper of cattle and flour. The main street of Helena, the capital, used to be Last Chance Gulch, of gold dust fame.

Agriculture, greatly dependent on irrigation, has become the state's leading industry. Curiously, it spread from west to east, after the first crops and cattle were raised in Montana's Rocky Mountain western part to sell to the miners. The state is seventh in wheat growing, also raises barley, oats, corn, potatoes and fruit. Livestock, wool and lumber are major products.

French explorers from Canada, in 1742, were the first white men to see Montana which has some of the most rugged of U. S. scenery, particularly in the Glacier National Park area. The state is popular for hunting, fishing and dude ranching. On Yogo Creek, in the Judith Basin, is a sapphire mine which produces half of the nation's output of precious stones. An increased industrial future is possible for

Montana because of the fine water power potential. In state politics, Montana is usually Democratic, but it has fluctuated over the years in national politics.

Nebraska

Centuries ago Nebraska was the floor of an inland sea and today it is a great sea of grain. The state ranks second in rye, third in corn and wheat, fifth in barley and seventh in oats. In its fertile soil grow 400 varieties of native grass—a number not exceeded by any state. Nebraska is one of the largest producers of dry beans. Its sizable cattle and hog industry help to make Omaha the country's fourth rail center, one of the greatest stockyard and meat-packing centers. One of the world's largest creameries is at Lincoln, the capital. Flour, freight cars, brick and tile are other Nebraska factory products. Oil was discovered in 1939 and built to a 5,000,000-barrel production.

Coronado, the Spaniard, saw Nebraska first in 1541 while searching for Quivira, mythical city of wealth. Three hundred years later the state was a crossing ground for the California, Denver and Oregon trails and the Pony Express.

Nebraska has large German and Scandinavian elements. In twenty national elections since 1868 it has gone Republican thirteen times. In 1937 Nebraska opened the first one-house Legislature in the country, a body to which members are elected without party designation.

Nevada

Famous in U. S. history for the fabulous Comstock Lode, famous in headlines for easy divorce, Nevada is the sixth state in size but smallest in population. Against a national average of 46.3 persons per square mile, Nevada counts little more than one per square mile. Its history is almost a story of its mines which have given up hundreds of millions in gold, silver, copper, lead, zinc, quicksilver and tungsten.

Nevada created new industries in 1931 by requiring only a six weeks' residence for divorce and by legalizing gambling. The gaming tables now pay a 1 percent business tax. Tourists also are drawn by the grand spectacle of Boulder Dam, the world's highest, on the Colorado River, near Las Vegas. Nevada's crops, mainly wheat, barley and potatoes, virtually depend on irrigation. Its manufacturing, in creameries, planing mills, food and meat plants, is of only local importance.

Francisco Carces, a Franciscan friar, enroute to California in 1775, first saw Nevada's rugged scenery. Fifty years later Hudson's Bay trappers entered the area from the north. Until the discovery of the Comstock Lode, the population was about

a thousand, but the rush for gold and silver brought in more than 50,000. Today, the largest city, Reno, is little more than 20,000. Carson City, the capital, is only 2,500. Nevada was first in the world to use gas for capital punishment. Politically, it fluctuates between Democrats and Republicans.

New Hampshire

New Hampshire is the only state that ever played host to the formal conclusion of a major foreign war. The scene was Portsmouth, the state's principal Atlantic port, where the treaty settling the Russo-Japanese War was signed in 1905. Fairly level and flat in the Portsmouth area, New Hampshire rises in the north to the White Mountains, the highest in New England. The strongest U. S. wind velocity—188 miles per hour—has been recorded atop Mt. Washington.

The sandy and stony loam of New Hampshire needs liberal fertilization for the growing of its principal crops—fruit, truck vegetables, corn, oats, hay and potatoes. The state's farming runs strongly to dairying. Mica, feldspar, clay and granite are the principal mineral products of New Hampshire's rugged earth. With 1,300 lakes and good climate for both winter sports and summer vacations, the state is highly popular as a resort area.

U. S. commercial grape-growing began in 1853 at Concord, the capital. Sixty percent of New Hampshire manufacturing is in textiles, leather goods, and pulp and paper products in the factories of Manchester, Berlin, Dover and Nashua. Shoes are another important product. Martin Pring, an English sailor, first looked over New Hampshire in 1603 and its settlement began twenty years later at Portsmouth and Dover. Two houses, built in 1664 and 1668, still stand in Portsmouth. Over the years, Republicans hold the edge in New Hampshire politics.

New Jersey

New Jersey is the fourth smallest of states but it pulls a mighty oar in the U. S. economy as one of the most intensely industrial areas in the nation. The state's thousands of plants make virtually everything from pins to battleships to give it sixth place in U. S. manufacturing.

Hilly in the north, New Jersey slopes to a low, flat, southern end crammed with truck gardens growing a great variety of fruit and vegetables for the state's own big cities, for New York and Philadelphia. In commercial fishing off an Atlantic coast line that is studded with summer resorts, New Jersey ranks ninth.

Giovanni da Verrazano, a Florentine sailor carrying French papers, first saw

New Jersey in 1524. In subsequent settlement the state became rich in U. S. lore and Colonial history. The oldest U. S. highway, built in 1650, can still be seen in Warren County. The first U. S. lighthouse was erected at Sandy Hook in 1764. The first U. S. iron works were set up in 1740 at Ringwood. Good transportation and proximity to raw materials and big markets marked the state for industrial development.

New Jersey leads the nation in dyed and finished textiles; chemicals, paints and varnish; elevators and elevator equipment; and tanning materials and dyestuffs. Newark, the largest city, has more than 1,300 factories, is a big insurance center. Trenton, the capital, is famous for pottery and clay products. Paterson is the U. S. silk center. Camden makes everything from pen points to talking machines to warships. Other humming industrial cities are Jersey City, Passaic, Kearney, Elizabeth, Bayonne and Hoboken.

New Jersey's seaports are among the busiest, but they are counted as part of the Port of New York. Atlantic City, Ocean City, Cape May, Asbury Park, Ocean Grove and Wildwood are the principal coast resorts. New Jersey mines zinc and clay, is second in U. S. peat production. In politics, the state fluctuates between Democrats and Republicans.

New Mexico

Mountainous New Mexico, fourth in size and fourth in high elevation, is devoted to mining, cattle raising and agriculture that is virtually dependent upon irrigation. Santa Fe, the capital, is the oldest seat of government in the nation. It was founded in 1605 by the Spaniards and on its central plaza there still stands an ancient adobe building known as The Palace, built in 1610 and used until 1909 as the official home of the Spanish, Indian, Mexican and American governors. Rich in aboriginal history, New Mexico has been a treasure chest for students of such early Americans as the Pueblo Indians and their communal civilization. In the north the Navajos live on a 16 million acre reservation, the nation's largest.

On once arid but now irrigated land, New Mexico grows corn, wheat, potatoes, sorghums, cotton, vegetables, sugar beets and fruit. As a miner, the state ranks second in tin, and fourth in copper, zinc and vanadium. It has a substantial lumber industry in pine and Douglas fir. Some oil is produced and the state has vast undeveloped coal resources.

Albuquerque, the largest city, turns out a variety of small manufacturing products. The state's dry and healthful climate makes Santa Fe and other communities well patronized health resorts, especially

for persons suffering from lung ailments. Cabeza de Vaca, the Spanish explorer, traversed New Mexico first in 1528-36. In politics the state tends to be Democratic.

New York

New York, with the great metropolis of New York City, is the spectacular nerve center of the nation. It leads in population, manufacturing, foreign trade, commercial and financial transactions, book and magazine publishing, theatrical production and in a host of other fields. It is the principal key state in any national election, and so significant in the life of the country that any New York Governor is almost automatically a Presidential possibility.

New York City, where more than half the state's population lives, is not only a national but an international leader. It is the busiest seaport in the world, loading and unloading scores of ships each day. LaGuardia Field is the world's largest commercial airport and an even greater one, Idlewild Airport, is on the way to completion. New York City's annual bank clearings are nearly 50 percent greater than the combined total of the next fifteen U. S. cities, and a stormy day in the great financial community of Wall Street causes repercussions around the globe. First in manufacturing since 1824, the city today has a gigantic clothing and fur industry, and also makes chemicals, paints, drugs, machinery, paper, wood and textile products. Manhattan, the principal of the city's five boroughs, has the tallest buildings in the world.

New York City's factories and workshops account for 60 percent of the state's 7 billion dollars of annual manufacturing value. Nearly all the rest of the state's manufacturing is done along the Hudson River north to Albany, and the New York State Barge (Erie) Canal west to Buffalo. The third busiest Great Lakes port, Buffalo makes planes and flour, and products of rubber, iron, steel, meat, grain and chemicals. Rochester leads the world in making photographic and optical equipment. Troy is the largest U. S. shirt and collar center. Utica is a big textile city and makes a third of all U. S. knitted underwear. Syracuse makes typewriters, washing machines, auto bodies and parts, and heavy implements. Albany, the capital, has important diversified manufacturing.

Except for the busy belt from New York to Albany to Buffalo, New York's economic life is distinguished by nothing but an intense devotion to dairying and fruit and vegetable growing to supply the daily food needs of the great urban centers. It is one of the U. S. leaders in milk and cheese production, and in growing such table staples as potatoes, onions and cabbages. The state

ranks second to California in growing grapes and has a big wine industry.

New York is level or hilly in the west and central parts and broken by the Adirondack and Catskill Mountains in the east. It ranks second in production of salt, and eleventh in oil, the wells being in the southwest adjacent to Pennsylvania fields. Iron ore and zinc are found in small quantities.

The state leads the nation as a tourist attraction. The convention and tourist business is New York City's fifth greatest source of income, and there are famous resort areas upstate in the mountains, and around Lakes George and Champlain. Lake Placid is notable around the world as a winter sports center. Long Island is another of the state's playgrounds. Trudeau sanitarium, at Saranac Lake, was first in the world to treat tuberculosis on a large scale.

Henry Hudson, an Englishman working for the Dutch, first saw New York in 1609 when he sailed up the Hudson to Albany. In the same year Samuel de Champlain, a Frenchman, came down from Canada and named a big lake after himself. On the basis of Hudson's work, the Dutch bought Manhattan Island from the Indians for \$24 worth of trinkets and set up the colony of New Amsterdam. In 1664 the English seized the colony and re-named it New York. One of the decisive battles in world history was fought at Saratoga in the Revolution in 1777 when the Americans defeated Britain's big campaign to cut the colonies in half. For a short time New York City was the United States capital, and George Washington was inaugurated there as first President on April 30, 1789. New York is Republican upstate and Democratic in New York City. In both national and state elections, control has divided over the years between the two parties.

North Carolina

North Carolina is the nation's busiest tobaccoist. It grows 40 percent of all U. S. tobacco, about 70 percent of all U. S. of cigarette tobacco. Its factories—the biggest are at Durham and Winston-Salem—make more than half of the more than 100 billion cigarettes that the country smokes in a year. Adding to this the output from the cotton mills and clothing factories

Charlotte, Durham, Greensboro, Winston-Salem, and Raleigh, the capital, North Carolina stands twelfth in the nation in manufacturing. And with corn, cotton, soy, peanuts and fruit added to the huge tobacco crop, it ranks among the top leaders in agriculture.

North Carolina's mountains are believed to be the oldest in the country. Mt. Mitchell, at 6,684 feet, is the highest east of

the Mississippi. The state's many streams and falls give it the fourth best U. S. potential in hydro-electric power. It leads in the mining of mica, feldspar and bromine, is second in asbestos. It ranks seventh in lumber production and, in Great Smoky National Park, has the largest U. S. stand of red spruce. Furniture manufacture is growing in importance. The resort business, both at the shore and in the mountains, is extensive.

The English made their first, but unsuccessful, attempt to settle North America at Roanoke Island in 1584. Virginia Dare, the first white child of English parentage in North America, was born there in 1587. In the Civil War, North Carolina lost more men than any other state. In politics, North Carolina is regularly Democratic though it broke the Solid South tradition in 1928 by voting Republican in the national election.

North Dakota

"Number One Northern Hard"—a famous grain grading—defines a wheat first grown in North Dakota, one so good it gets a 10 to 16 percent price premium. The Red River Valley, immortal in U. S. folk song, is important to North Dakotans as a remarkably fertile bread basket. The state ranks first in spring wheat, first in barley, second in all wheat, third in rye, sixth in oats. A total of 87 percent of its acreage is farm land. Most of its manufacturing—the making of butter, cheese, flour and milk products—is tied directly to the land.

Bismarck, the capital, has recorded the greatest U. S. temperature extreme—from 114 above to 45 below zero. Fargo is the largest city. Geologists believe that North Dakota holds two-thirds of American deposits of lignite. Mining and processing of lignite is a growing industry.

A French fur trader known as Verendrye first entered North Dakota from Canada in 1738. Sacajawea, a Shoshone Indian woman, is probably North Dakota's most notable person. In 1805 she joined Lewis and Clark and made herself so useful as guide and diplomat that the expedition might have been lost without her. Dakota Territory was separated into North and South Dakota in 1889. Politically, North Dakota usually is Republican, but in times of agricultural depression has shown strong liking for third parties promising quick relief.

Ohio

With vast coal and oil fields at one hand, with Great Lakes iron ore close by at the other, Ohio automatically developed into one of the nation's greatest industrial states. It ranks fourth in all manufacturing and contains three of the first seven-

teen U. S. industrial areas. Cleveland, the largest city, is the world's biggest handler of iron ore. In all, six Ohio cities place among the fifteen busiest Great Lakes ports.

Cleveland's vast and varied factory output includes the U. S. leadership in wire, nails, nuts and bolts. Akron's many rubber plants can make more than 125,000 tires a day and, before synthetic rubber, used half of all U. S. crude rubber imports. Cincinnati makes tools and paper and is a national radio center. Canton and Youngstown make dozens of heavy steel products. Dayton is famous for cash registers, also makes golf clubs, refrigerators and motors. Toledo, with a big factory production, is also the largest coal shipping point in the world. Springfield makes trucks and steel caskets. Columbus, the capital, turns out mining machinery, railroad cars, shoes and glass.

Ohio's thousands of factories almost overshadow its importance in two other basic industries—mining and agriculture.

The state ranks fifth in coal, thirteenth in oil, fourth in sand and gravel, high in clay products, and leads all the states in production of lime and limestone.

Its fertile soil, high in the middle and sloping off toward Lake Erie on the north, the Ohio River on the south, stands fourth in soy beans, sixth in corn, sixth in wheat, high in grapes, eleventh in tobacco. Ohio is fifth in egg production and its dairying and livestock feeding are extensive enough to place the state about seventh in all farm cash income.

The first Europeans explored Ohio in about 1650. Five Presidents have been elected from Ohio, and two others elected from other states were born in Ohio. In recent years Ohio has fluctuated between Democrats and Republicans.

Oklahoma

Oklahoma, with rolling plains spread westward from the wooded Ozark Mountains, stands fourth in U. S. production of oil, fourth in growing of wheat, first in mining of zinc. Tulsa, one of the world's wealthiest per capita cities, is a great oil center where most of the major firms maintain offices. Oklahoma City, the capital, pumps oil wells just a few steps outside its business district. Oil refining, zinc smelting, meat packing and flour milling are chief factory industries. The development of glass products is ever increasing. The state leads in growing broom corn, also grows oats, corn, cotton, sorghums and potatoes.

Hernando Coronado, Spanish explorer, first saw Oklahoma in 1541 while searching for the mythical city of Quivira. In 1834 white settlers were barred when most of Oklahoma was set aside as Indian ter-

ritory. At noon on April 22, 1889, the major part was opened to homesteaders and in one day 50,000 persons swarmed in. The term "Sooners" was born. It applied to the greedy who had sneaked in sooner than the law allowed. Today Oklahoma has the biggest U. S. Indian population, more than 60,000, and some of them are wealthy from oil discoveries on their land. One payment to the Osage Indians totaled \$22,000,000 in 1926. One of the state's natural wonders is the Great Salt Plain in the northwest, level as a table top, the residue from an ancient inland sea. Oklahoma is one of the three states which forbid the sale of hard liquor. In politics it is usually Democratic.

Oregon

While it ranks second to Washington in the cutting of lumber, Oregon could easily be first. The state has the greatest U. S. reserve of standing timber—about 438 billion board feet which is 20 percent of the nation's total. Oregon stands near the top in the raising of a great variety of fruit, and its salmon fishing industry, centered at Astoria at the mouth of the Columbia River, is one of the world's largest. The state leads in growing hops, also raises nuts, wheat, hay, oats and potatoes. Oregon has much undeveloped mineral wealth, including gold, silver, copper, lead, iron and platinum. Mercury, chromite and antimony are mined in quantity.

Oregon's coast is lush and green with very heavy rainfall. In the southeast, far back of the Coast and Cascade Mountain Ranges, it runs to near-desert land. Portland, a hundred miles up the Columbia River, is the fourteenth busiest U. S. seaport, the third most active Pacific port. Besides being a big shipper of wheat and lumber, Portland has factories which account for a third of the state's manufacturing, including lumber and food products, flour and machinery. Salem, the capital, is an important canner and maker of wood products.

Francis Drake, the Englishman, or the early Spanish sea captains, may have looked on Oregon in the early sixteenth century. Bruno Hecata, a Spaniard, in 1775, was the first known to have landed there. Oregon early attracted substantial settlers and was the first of the far-Western states to be settled without the help of a major gold rush. Republicans have usually predominated in Oregon politics.

Pennsylvania

From the steel mills of Pittsburgh through the mid-state coal mines and oil wells to the shipyards and factories of Philadelphia, Pennsylvania bristles with

heavy industry that has made it an American bulwark since early Colonial days. The state is second in manufacturing, second in all coal mining, first in anthracite coal mining, ninth in oil production and ships, and vast export volume out of Philadelphia, the second busiest U. S. seaport.

Iron and steel are the state's trademarks. Before 1892 Pennsylvania was making iron and by 1727 it was exporting iron to England. Today about half of U. S. iron and steel is made in the Pittsburgh area where they are saying runs, "Times is tough when the sky ain't smoky." Pittsburgh also is a big maker of electrical machinery. Philadelphia plants turn out machinery and textiles, and products of oil, coal, food and chemicals. Harrisburg, the capital, makes boilers, engines, knit goods and iron, steel and tobacco products. Scranton is the second largest U. S. silk manufacturing center. Wilkes-Barre makes locomotives, wire, machinery, and iron and steel and textile products. Allentown turns out trucks, busses, machinery, cigars, textiles and is a big cement producer. Erie, the fourteenth Great Lakes port, makes locomotives, blast furnaces and other heavy products, and Reading is one of the nation's biggest silk hosiery and underwear makers.

Traversed by the Appalachians through its central part from northeast to southwest, Pennsylvania contains virtually all the U. S. anthracite (hard coal) deposits. These lie in the northeast, around Scranton and Wilkes-Barre. Aside from coal and oil, Pennsylvania is the U. S. leader in producing cement, coke, cobalt and lead and zinc pigments. It ranks high in stone, clay, peat and natural gas.

As a farmer, the state stands first in growing buckwheat and seventh in tobacco. It is high in apples and potatoes, and also raises corn, wheat, oats, barley, hay and peaches.

Rich in historical lore, Pennsylvania was founded as a colony in 1681 by William Penn, the Quaker. Benjamin Franklin became its most famous citizen. Philadelphia was the seat of the Federal government most continuously from 1776 until 1800 and there the Declaration of Independence was signed, and the Constitution formulated. Valley Forge, of the Revolution, and Gettysburg, the turning-point battle of the Civil War, both are in Pennsylvania. In politics, the state usually is Republican.

Rhode Island

Little Rhode Island—it would fit into Texas 220 times—set the theme for its future in 1790 when Samuel Slater established the first cotton thread spinning mill in the nation at Pawtucket. Today Rhode Island has the greatest per capita

industrial output in the country, and the bulk of the products comes from the great textile mills of Pawtucket, Providence and Woonsocket. Tools and machine tools are other leading products and Providence, the capital, is one of the largest U. S. jewelry centers.

Rhode Island has by far the greatest density—nearly 700 persons per square mile as against the national average of 46.3. More than nine tenths of the people live in the cities. To the south, in the low, rounded hills of Rhode Island, dairying and truck farming are carried on despite the sterility of the boulder clay soil. Potatoes, corn, apples, oats and hay lead the crop list.

Roger Williams founded Providence, and subsequently Rhode Island, in 1636 after he had been banished from Massachusetts for non-conformance in religious doctrine. Newport is the site of the Naval War College and was long a showplace for the magnificent summer homes maintained by wealthy persons from New York. Republicans have held an edge in Rhode Island politics.

South Carolina

Once primarily agricultural, South Carolina has built so many big cotton textile mills that today the state's factories double the output of its farms in cash value. Greenville, the principal textile center, turns out 4,500 different cloth patterns. Columbia, the capital, and Spartanburg are humming cotton mill cities. Charleston, the largest city and busiest seaport, makes asbestos, wood, pulp and steel products. Many South Carolina communities make commercial fertilizer in volume.

Running from a sandy coastal belt to the Blue Ridge Mountains in the west, the state ranks fifth in growing cotton, fifth in tobacco, and twelfth in lumbering. Turpentine and resin are major products from its vast yellow pine forests. Only California and Georgia grow more peaches than South Carolina, which also raises corn, hay, oats, sweet potatoes and peanuts. Stone, clay, and sand and gravel are the principal mineral products.

Spaniards in the early sixteenth century were the first white men to see South Carolina. Under the English, North and South Carolina were one large colony until they split in 1729. Civil War hostilities started at Charleston when, on April 12 and 13, 1861, South Carolina men bombarded and captured Fort Sumter. Later in the same war, the Confederates operated in Charleston harbor the first submarine ever used in warfare. South Carolina is steadily Democratic in politics.

South Dakota

South Dakota offers a varied set of extremes. The Homestake Mine, at Lead, is the richest single U. S. gold mine. At \$3,000, South Dakota's Governor is the lowest paid U. S. Governor. In the Black Hills is 7,242-foot Harney Peak, the highest spot east of the Rocky Mountains. Also in the Black Hills, at Mt. Rushmore, a gigantic national memorial is being sculptured from solid rock on a granite face 700 feet high which will feature the heads of Washington, Jefferson, Lincoln and Theodore Roosevelt. Armstrong County, an unorganized unit in South Dakota, has a population of forty-two—the smallest U. S. county population.

Seventy-five percent of the state's people are in agriculture or dependent industries. In a recent good year the crop value was \$245,000,000. In a recent bad year it was \$28,000,000. South Dakota is first in rye, third in barley, fifth in oats, seventh in corn, eighth in wheat. Cattle raising and dairying are strong industries. Pierre, the capital, and Sioux Falls, Aberdeen, Rapid City and Huron all are cattle shippers, meat packers, makers of butter, cheese and flour.

In the southwest are the desolate Bad Lands and the beautiful Black Hills. South Dakota's gold was discovered in 1874 by General Custer's men on Indian land in the Black Hills. When the gold-hungry whites swarmed in illegally, the Sioux took to the warpath and one result was the Custer massacre in 1876. Feldspar, bentonite and mica are other mining products. The French trader, Verendrye, first saw South Dakota in 1743 when he came down from Canada looking for a western ocean. In South Dakota politics, Republicans usually have their way.

Tennessee

While Tennessee is far down the list in U. S. industry, it won world prominence in 1945 for the single product of one factory—the atomic bomb that was a product of the Clinton Engineer Works at Oak Ridge in the Tennessee Valley and of plants in Washington and New Mexico.

Aside from that distinction, Tennessee is a predominantly agricultural state affected by the South's steady trend toward increased industrialization. It places fourth as a cotton grower, and thirteenth in corn. Other crops are wheat, oats, barley, hay, potatoes and peanuts. Lumbering is extensive. The state is tenth as a coal miner, also produces stone, zinc and cement.

The Tennessee Valley Authority, a system of big dams on the Tennessee River and its tributaries, has been a great benefit

to the state for flood control, cheap electric power, increased navigation and artificial lakes for recreation. Tennessee runs from the Great Smoky Mountains in the east down to tableland and then down to the Mississippi bottoms. One of its natural beauty spots is Fall Creek Falls, a 256-foot waterdrop, the highest east of the Rockies.

Memphis, the largest city, is the biggest U. S. inland cotton market, the biggest hardwood lumber market. Nashville, the capital, has diversified factories, is a leader in publication of religious periodicals and books. Knoxville has cotton mills. Chattanooga's 440 factories make 1,500 items from clothing to boilers. Hernando De Soto, Spanish explorer, first entered Tennessee in 1541. One of the highest battles of the Civil War—the Battle Above the Clouds—was fought in the state on Lookout Mountain. Tennessee is usually Democratic.

Texas

Big, sprawling Texas is the richest political subdivision in the world, with the possible exception of the Russian Ukraine and India. The state leads the nation in production of oil, natural gas, cotton, beef cattle, helium, sulfur, sheep, wool, goats, onions and turkeys. Texas cotton—a third of the U. S. total and a seventh of the world total—is the most valuable crop grown inside a component state. Texas is the only state to top a billion dollars a year in mineral production. Aside from its "firsts," Texas ranks high in other items—second in grapefruit, third in eggs and oranges, fifth in pears, sixth in peaches, second in peanuts, seventh in sweet potatoes, ninth in lumbering. More than fifty crops are grown on a commercial scale, including corn, wheat, oats, sorghums, potatoes, rice, pecans and a long list of vegetables.

Most of the state's big production records stem from its size—one-twelfth of the nation. Its largest county, Brewster, is six times the size of Rhode Island, and the whole state is 220 times the area of Rhode Island. The climate ranges from a subtropical south to a temperate north where snow averages two feet in a winter. From Texline to Brownsville, or from El Paso to Beaumont is a greater distance than from New York to Chicago.

Mountainous in the west and running eastward through broken prairie land to the lowest area along the Gulf of Mexico, Texas was explored first in 1528 by Cabeza de Vaca, a shipwrecked Spaniard. Since then, the state has flown five flags—those of France, Spain, Mexico, the Texas Republic and the United States. Texas is the only state authorized by Congress to subdivide into five states any time it wishes.

With its huge cotton and oil exports, Texas has seven of the first thirty Gulf ports—Houston, Beaumont, Port Arthur, Texas City, Corpus Christi, Port Arkansas and Galveston. Houston, the largest city, makes chemicals, fertilizer, grain products and cement. Austin, the capital, makes brick and tile, food products and furniture. Fort Worth is the largest meat packer south of Kansas City, and the biggest grain market in the South. Dallas is one of the largest U. S. inland cotton markets, an oil refiner and a big maker of cotton gins. San Antonio, the site of the historic Alamo, makes iron, steel, cotton and tobacco products. Amarillo has the only U. S. lithium plant. In all manufacturing, Texas ranks eleventh.

Texas is first in total railroad mileage, and over the Neches River at Port Arthur is the most elevated highway bridge in the world. In Pecos County is the deepest hole in the world—an oil well that goes down 15,279 feet. Texas is consistently Democratic in politics, though it broke from the Solid South to go Republican in the national election of 1928.

Utah

Utah, first in gold mining, and high in copper, silver and lead, was probably the first U. S. area to be fully explored. Not until early in this century did the world learn of the strange land in its southeast corner—a place of deep twisting canyons and weird colored rock formations. There, in an area partly inaccessible even by pack train, are the largest natural bridges in the world. Millions of years of geological history can be read in the canyon walls.

The Mormons under Brigham Young began to settle Utah in 1847. Six times in the next forty years they applied for statehood but Congress kept the door closed until 1896 when the Mormons promised to abandon polygamy. Spanish exploration in 1540 were probably the first whites to see Utah.

The state's crops require irrigation. Sugar beets rank first, then potatoes, hay, corn and wheat. There is an extensive livestock industry. Salt Lake City, the capital, the site of the Mormon Temple and a steel mill, refines ore, sugar beets and wool. Geneva and Provo are centers of steel making. Ogden and Logan process sugar beets and operate canneries.

Great Salt Lake, lying north central in mountainous Utah, has long been a world wonder. It covers 2,360 square miles, is 18 feet above sea level, has no known outlet, and a salt content of 17 to 20 percent, about three times that of the ocean. In politics, Utah switches between Democrats and Republicans.

Vermont

Vermont, the only New England state without a seacoast, is the U. S. leader in producing maple syrup and asbestos, sometimes the leader in marble and granite. In ratio to population, it keeps more dairy cows than any other state. Vermont's soil is largely devoted to truck farming and fruit growing—its rugged area dominated by the Green Mountains precludes any extensive farming. That same quality, however, along with a bracing dry climate, makes the state a great favorite both as a summer resort and as a center of winter sports.

Montpelier, the capital, and Rutland are in the granite and marble country. Some of the Rutland quarries, producing marble known all over the nation, are 300 feet below the surface. Burlington, the largest city, makes lumber products, venetian blinds, ovens and woollens. Bennington turns out knit goods, paper and furniture, and has the world's tallest battle monument, 302 feet high. The city was the base in the Revolution for Ethan Allen's Green Mountain Boys and the monument commemorates a British defeat in 1777 actually administered a few miles to the west in New York.

Samuel de Champlain, French explorer, saw Vermont first in 1609. For some years New York and Massachusetts argued over possession of the colony, and then it became an independent republic, lasting for fourteen years before joining the Union in 1791, the first after the original thirteen states. Vermont has been Republican since 1856. Only Georgia, on the Democratic side, ties that record.

Virginia

Richmond, the capital of historic Virginia, makes more cigarettes than any city in the world—about a third of the U. S. total. Both the state and its capital are richly bound up with American history. Jamestown, founded in 1607, was the first permanent English settlement in North America. Slavery was introduced to the continent in Virginia in 1619. The Revolution and the Civil War—with Richmond the Confederate capital—both ended in Virginia, and the state supplied seven of the first twelve Presidents.

Virginia steps up to the west from a low coastal belt, to the Piedmont Plateau, to the Blue Ridge Mountains, to the Appalachians. Tucked in its western mountains is the Shenandoah Valley, one of the richest U. S. farming areas. The state ranks third in tobacco and apples, also raises cotton, wheat, oats, potatoes, barley and sweet potatoes. It is fifth in growing peanuts and feeds a big part of the crop to

hogs which produce world-famous hams. In commercial fishing, Virginia stands sixth; in lumbering, tenth. There is a substantial livestock industry in southwest Virginia.

Norfolk, together with Portsmouth and Newport News, makes up the Port of Hampton Roads—the sixth busiest U. S. seaport, one that can handle a thousand ships with ease. Seventy percent of U. S. tobacco exports leave through this port. Newport News is a big shipbuilder. Iron and cotton products are important in Roanoke. Furniture, chemicals and textiles are other major products of Virginia factories. In politics, Virginia is predominantly Democratic, though it broke away to vote Republican in the national election of 1928.

Washington

Washington, in the northwest corner of the nation, has led the country in lumber production every year but one since 1905. Its rugged surface, divided north and south by the Cascade and Coast Mountain ranges, is rich in stands of Douglas fir, yellow and white pine, spruce, larch and cedar. Washington's other famous "first" is apples—it grows three to five times as many as the nearest competitor and ships them all over the nation. The state is fifth in wheat, high in all fruit, and grows barley, oats, corn, potatoes, hops and truck vegetables.

Washington ranges from a warm coast, rich in vegetation and soothed by the Japanese current, to near-desert land in the east. Grand Coulee Dam, built on the Columbia River for power and irrigation, is the world's largest concrete dam and creates a precious reservoir 151 miles long. Coal is the state's leading mineral, but the potential in gold, silver, zinc, lead and mercury is believed to be great.

The state has flourishing ports on Puget Sound—Olympia, the capital; Seattle, the largest city; and Tacoma and Everett. Spokane in the Columbia basin, the capital of "The Inland Empire," is a big power center for mining and irrigation. Food and lumber products and a wide variety of goods flow from Washington factories. The Handford Engineer Works, north of Pasco, Wash., was set up as the world's first full-scale plant for making atomic bombs. Bruno Hecata, a Spanish sea captain, in 1775, was the first white man known to have landed in Washington. In politics, the state fluctuates between Democrats and Republicans.

West Virginia

Mountainous West Virginia, the fortieth state in size, is the coal mining leader of the nation. In some years it digs 25 percent of all U. S. bituminous. Geologists

believe that if all other U. S. coal mines shut down, West Virginia alone could supply the country for 250 years. The state also ranks high in natural gas, oil, quarry products and hardwood lumber.

In 1861 Captain Thomas Batts and a party from eastern Virginia probably were the first whites to see the area. Until 1861 West Virginia was merely the north and west part of Virginia but its people created a new distinct state after refusing to secede in the Civil War. Wheat, corn, oats, hay, tobacco and fruit are leading crops. Charleston, the capital, makes glass, furniture, chemicals and steel. Huntington, the largest city, makes glass and textiles, and rolls nickel. Wheeling makes steel, tin plate, glass and medicine.

Like many mountain states, West Virginia has an equable climate, without extremes. White Sulphur Springs, in Greenbrier County, is a famous health resort. Mountain streams give West Virginia one of the highest U. S. water power potentials. In politics, Republicans have won in West Virginia a little over half the time.

Wisconsin

Wisconsin led the country in lumbering until its great pine and hemlock forests were tragically exhausted forty years ago, and then it turned to farm and factory. Today Wisconsin has more dairy cattle than any other state. In some years it makes half of the country's cheese, a third of the milk products. In total farm cash income, Wisconsin is only a few places from the top. The climate is so benign that serious crop failure is virtually unknown, and the state's many lakes make it a great summer resort favorite. Among Wisconsin's records are: first in canning peas, second in growing cranberries and hemp, fourth in oats, fifth in rye, eighth in tobacco.

Humming factories in a score of cities give Wisconsin tenth place in manufacturing. Superior, on Lake Superior, near the state's iron ore ranges, shares with Duluth, Minn., the rank of second busiest port in the nation, its tonnage exceeded only by New York. Six other Great Lakes ports—Milwaukee, Green Bay, Racine, Kenosha, Sheboygan and Ashland—are industrial centers making paper, autos, beer, machinery, furniture, clothing and scores of other products. Madison, the capital, has the only U. S. forest products laboratory.

Jean Nicolet, French explorer, seeking a northwest passage in 1634, was the first explorer to see Wisconsin. Germans and Scandinavians dominated its settlement. In 1934 it passed the first state unemployment compensation act. Republicans hold the edge in Wisconsin politics, where there long has been a strong Progressive movement.

Wyoming

Wealthy in wool, cattle, oil and coal, Wyoming was first in U. S. history to assure woman's place in politics. Its first territorial legislature in 1869 gave women the vote in all elections. And Mrs. Nellie Tayloe Ross, who held office in 1925-27, was the first U. S. woman Governor.

One of the world's largest sub-bituminous coal fields lies near Sheridan. One of the largest oil refining centers is at Casper, hard by the Teapot Dome, Salt Creek and Big Muddy oil fields. Cheyenne is famous for its annual "Frontier Days" celebration which draws patrons from Canada to Texas for the rodeo and other exhibitions of western life. Nearly every railroad town in the state is a shipper of cattle, sheep and wool.

Wyoming is second to Colorado in high, mean elevation, but irrigation in its plains areas favors the growing of corn, wheat, oats, fruits, seed potatoes. Wyoming sugar beets are the richest in the nation. Much of the state's mineral wealth is still undeveloped.

Yellowstone Park in the northwest corner is one of the greatest U. S. tourist attractions. Big game hunting is good in many parts of the state. Unless the early pioneers saw Wyoming, trappers about 1800 were probably the first white men here. The building of the Union Pacific Railroad in the 1860s gave settlement its start. Wyoming political control fluctuates between Democrats and Republicans.

District of Columbia

(Washington, D. C.)

The District of Columbia—identical with the City of Washington—is the capital of the United States and the first carefully planned capital in the world. In area it is sixty-nine and a quarter square miles carved out of Maryland on the north bank of the Potomac, a hundred miles up from Chesapeake Bay. In appearance, it is a symmetrical and generally beautiful city with more miles of tree shaded streets than any community in the world, possibly excepting Buenos Aires. It has mild winters, often oppressively hot summers, and is almost exclusively devoted to government. Washington's manufacturing, for example, is only for local consumption.

District of Columbia history began in 1790 when Congress directed selection of a capital site, 10 by 10 miles square, along the Potomac. When the site was determined, it included thirty and three-quarters square miles on the Virginia side of the river, but Congress returned that area to Virginia in 1846. Major Pierre L'Enfant, a young French engineer who had fought

in the Revolution, was commissioned by President Washington to plan the new capital, and by 1800 enough buildings were up and enough streets were laid out for the government to move in. In 1814—during the War of 1812—a British force marching overland from the Potomac's mouth burned the Capitol, fired the President's home and damaged or ruined other government buildings. It was from the white paint applied to cover fire damage that the President's home came to be called the White House.

Washington's skyline is dominated by the Capitol and the Washington Monument, a plain obelisk towering 555 feet. The Capitol, of Virginia sandstone and Massachusetts marble, overlooks the Potomac from a hill eighty-eight feet high. The top of its great dome is 288 feet above the ground. While the Capitol is not the city's center, it is the key to the street address system. Lines running through it north-south and east-west divide Washington into its four zones, northwest, southeast, etc.

During World War II Washington was one of the most crowded cities in the world. From a population of 663,000 in 1940, it shot to over a million at the peak in 1943 and its many suburbs for miles around were choked with government workers brought in for the war's office work. By the middle of 1945, the population had dropped back to 926,000.

Major L'Enfant designed a city of rectangular blocks, created by streets intersecting at right angles, and generally designated by numbers and letters. In addition, diagonal arteries fan out from various centers, making many parks and plazas suitable for statues and monuments. Pennsylvania Avenue—the radial lines are, generally, named for the states—is probably the most famous of them, with the White House at No. 1600 and the Capitol also on its route.

Washington has many world-famous buildings and monuments—the Library of Congress, Jefferson Memorial, Lincoln Memorial, Grant Memorial, Tomb of the Unknown Soldier, Treasury Building, Ford's Theater on Tenth Street in which Abraham Lincoln was shot, the Peterson House at No. 453 Tenth Street in which Lincoln died, National Gallery of Art, the new majestic government buildings on Constitution Avenue, and scores of others.

Washington is administered by three commissioners appointed by the President. Two of them must be residents of the District of Columbia, and the third must be a U. S. Army engineer.

Alaska

Alaska, the biggest, coldest and wildest of U. S. possessions, was called "Seward's

Folly" in 1867, when Secretary of State William H. Seward arranged for its purchase from Russia for \$7,200,000. Since then Alaska has paid for itself scores of times over in fish, furs, and minerals, and annual exports today run not far under \$75,000,000. Its wildlife resources alone are valued at over \$100,000,000.

Nearly a fifth of the United States in size, Alaska is a fat, blunt peninsula with two long necks. At the southwest, the Aleutian Islands run out 1,200 miles to the International Date Line. At the southeast, Alaska's panhandle runs several hundred miles down the Canadian Pacific Coast. There are east and west mountain ranges with a vast plateau in the middle, and a great plain extending to the Arctic Ocean on the north. Mt. McKinley, in the south central part, is 20,300 feet high, the tallest peak in North America.

Canned salmon—nearly 5 million cases a year—is Alaska's biggest product. Ketchikan, population about 5,000, probably cans more salmon than any place in the world. Alaska mines about \$2,000,000 a year in gold, supplies most of U. S. tin, and also turns out copper, platinum, coal, oil, gypsum, limestone, and marble. At least seventeen other minerals exist, some of them produced commercially.

The Pribilof Islands, in the Bering Sea, are world famous as the breeding ground of the Alaska fur seal. Careful government control of the annual take has increased the seal herd from 215,000 in 1912 to 2,021,000 in 1939. Beaver, muskrat, otter, mink, and other furs also are produced in the fur industry that totals several million dollars a year. Alaska, with its wild interior, still partly unexplored, is a hunter's paradise. Big game includes the grizzly, polar, and Kodiak bear, moose, mountain sheep, and caribou.

Vitus Bering, a Dane working for the Russians, discovered Alaska in 1741. Until the U. S. purchase, it was known as Russian America. Sitka was the capital until 1906. In 1912 Alaska became a territory with Juneau as capital. With only one person for every eight square miles, Alaska is by far the most thinly settled of U. S. lands. Point Barrow, the northernmost occupied spot in North America, is icebound ten months of the year. Inland winter temperatures go down to 60° below zero, but the coast bathed by the Japanese current ranges between zero and 80° F. A small amount of farming is squeezed into the short summers.

Alaska is administered by a governor appointed by the President and a locally-elected two-house legislature. Its delegate to Washington has a voice but not a vote in the House of Representatives.

During World War II the Japanese occupied the tip of the Aleutians, but U. S.

forces retook the islands in 1943. Gold mining was banned in Alaska during the war, but in 1946 the largest low-grade-ore gold mine in the world, the Alaska Juneau Mine, was preparing to open.

Alaska has magnificent glaciers and active volcanoes. In June 1912, the whole top blew off Mt. Katmai in the Aleutian range. Of Alaska's 1939 population of 72,524, about 30,000 were Aleuts, Eskimos, and Indians and most of the rest were whites.

Canal Zone

Fifty miles long and ten miles wide, with the Panama Canal crossing its middle, the Canal Zone is a protective belt of U. S. territory guarding the vital water link between the Atlantic and the Pacific Oceans. Its land area of 362 square miles is smaller than New York City. Its 1940 population was 51,287, but during World War II many thousands of Army and Navy personnel poured into the zone to man its approaches against enemy attack and to guard its three sets of locks against sabotage.

The Canal Zone, bisecting the Republic of Panama at its lowest and narrowest point, was granted to the United States by Panama on Feb. 26, 1904, for \$10,000,000 outright, an annual payment of \$250,000, later increased to \$430,000. The canal was opened ten years later. No private individuals are permitted to own land in the Canal Zone, which is administered by a governor appointed by the President. Cristobal is the port at the Caribbean end, and Balboa at the Pacific end.

The Panama Canal was envisioned nearly 400 years before it was built. King Charles V of Spain ordered a survey made in 1534, after mariners found no access to the Pacific. Many routes and many schemes, some utterly fantastic, were proposed during the next three centuries. In 1879 the French obtained canal rights across Panama, then part of Colombia. After twenty-five years of fighting disease and working with inadequate tools, the French gave up. The United States interested in a canal since 1825, bought the French rights for \$40,000,000 and set to work. As a result of the transaction, Panama, with U. S. backing, won independence from Colombia.

The canal collected more than \$500,000,000 in tolls in its first twenty years. Only U. S. Navy craft pass through free. The largest vessels using the canal, foreign battleships, pay over \$20,000 for the ocean-to-ocean transit—a bargain since it would cost them more than that in time and money to go around South America.

High water in Gatun Lake is eighty-five feet above sea level. From Caribbean to Pacific, the locks which make this climb and descent are Gatun Locks, Pedro Miguel Locks and Miraflores Locks, which have a

tal of six steps or levels. The locks are 100 feet long and 110 feet wide. Gatun dam is the third largest earth dam in the world, and Gatun Lake, which it creates, is the world's second largest artificial body of water. Because of the curve of the isthmus, the Pacific end of the canal is twenty-seven miles east of the Caribbean end.

The canal's biggest peacetime year was 1929, when it averaged seventeen ships a day and collected a total toll of \$27,111,125. In 1939 Congress authorized a \$277,000,000 construction of new locks parallel to the present ones, but 1,200 feet long and 140 feet wide to permit the handling of vessels not barred because of their size. Construction work, begun in 1940, was halted by the war.

Hawaii

Hawaii, a volcanic-coral island group about three times the size of Delaware, grows 90 percent of the world's pineapple but it won a far sharper fame on Dec. 7, 1941, when the Japanese attacked Pearl Harbor, the U. S. Navy's greatest base, near Honolulu, the Hawaiian capital. Throughout World War II, virtually all of the territory's normal life was subordinated to its role as the military and naval springboard for America's war in the Pacific.

Hawaii is 2,394 miles southwest of San Francisco. The group is a 390-mile chain of islands and eight main islands—Hawaii, Molokai, Maui, Lanai, Molokai, Oahu, Kauai, and Niihau. Largest in size but not longest geologically is Hawaii. Its highest peak, Mauna Kea, rises to 13,784 feet and in a sense, the world's highest mountain since it springs from an ocean floor 10,000 feet below sea level. Kilauea, on Hawaii, is the world's largest active volcano. The islands have no snakes and their only native mammal is a small bat, but there are more than a hundred species of birds.

Hawaii's temperature seldom exceeds the extremes of 56 and 88 degrees, and the land is fertile for all sorts of tropical and subtropical fruits and vegetables. The islands are one of the world's largest producers of cane sugar, and also grow coffee, pineapples, cotton, bananas, nuts, and potatoes. Much of the crop land is irrigated. Some livestock is raised. The main mineral products are building stone, lime and salt. Aside from food processing, Hawaiian manufacturing is limited to small iron works and cement making.

In normal times, the tourist business is Hawaii's third biggest source of income. Among its world-famous ingredients are Waikiki Beach, distinctive native music, surf-board riding, a native dance called hula-hula and the flower garlands known as leis.

Today the most highly organized of

U. S. territories and clearly on record (1940) as applying for statehood, Hawaii was named the Sandwich Islands in 1778 by its discoverer, Captain James Cook, an Englishman. It was ruled by native monarchs and proclaimed a republic in 1894 after Queen Liliuokalani was driven from the throne. It ceded itself to the United States in 1898 and became a territory in 1900. Inter-marriage has reduced the pure Hawaiian race to about 14,000 persons, with Caucasians and Japanese the largest elements among the territory's 1945 population of 502,122. Hawaii's Governor is appointed by the President to a four-year term and there is a locally-elected two-house legislature. Hawaii's delegate to the House of Representatives in Washington has floor privileges but no vote.

The modern and beautiful city of Honolulu is, technically, the most-spread-out city in the world. Part of it, for administrative purpose, is Palmyra, a coral atoll, 960 miles to the south. Hilo, Kahului, Ahukini and Port Allen are minor island ports. In a normal year Hawaii exports over 100 million dollars worth of sugar, pineapple, canned tuna, fiber board and other products, while importing about 135 million dollars worth of manufactured goods.

Puerto Rico

Puerto Rico, a 95-mile-long U. S. dependency at the northeast head of the Caribbean Sea, is a big cane sugar and rum producer and a humanity-packed island with a population density exceeded in U. S. records only by Rhode Island and New Jersey. Its density rate of about 550 persons per square mile has forced not only the cultivation of some of its interior mountain slope nearly to the summits, but also legalization, in 1937, of publicity for birth control.

Sugar, rum, needlework, cigars, citrus fruits, coconuts, coffee, molasses, pineapples, rugs, rope and buttons are the chief exports of the 35-mile-wide island which was discovered by Columbus and conquered for Spain in 1509 by Ponce de Leon. The United States seized Puerto Rico in 1898 in the Spanish-American War. The island is administered by a Governor appointed by the President, and by a locally-elected Congress. It has a Resident Commissioner in Washington with a voice in the House of Representatives, but no vote. Puerto Ricans have long agitated for a change in their political status, some wanting merely more autonomy and some demanding complete independence.

About 75 percent of the population is white and 25 percent Negro. The Roman Catholic religion is predominant. While Spanish is the popular language, English

is spoken by most residents and especially by the younger generations, which have benefited from probably the best school system in Latin America. San Juan, Ponce and Mayaguez are the leading cities. San Juan, the capital and largest city, has a fine harbor, overlooked by Morro Castle and San Cristobal, the ancient forts built by the Spanish to guard the port.

Virgin Islands

The Virgin Islands, a U. S. dependency east of Puerto Rico, are notable for making rum and entertaining tourists. They consist of about fifty islets and three main islands—St. Thomas, St. Croix, and St. John—with an area of 132 square miles. The hilltops and sandy beaches, today favored winter tourist spots, once were hangouts of pirates.

Columbus discovered the group in 1493 and named them for St. Ursula and the Eleven Thousand Virgins. The first recorded settlement was on St. Croix in 1621. The Danes took over the islands in 1671. The United States bought them from Denmark for \$25,000,000 in 1917.

The Virgin Islands' population has declined from 43,178 in 1835 to 24,889 in 1940. About 70 percent of the population today is Negro. Charlotte Amalie, the capital, on St. Thomas, was named for a Danish princess. St. Croix grows most of the cane sugar that goes into rum, while St. Thomas also makes bay rum. There is limited farming, fishing and cattle raising. Vegetables, citrus fruits, and coconuts are raised. Virgin Islanders have U. S. citizenship and are ruled by a Governor appointed by the President and municipal councils elected locally. English is the prevailing language.

Guam

A volcanic island about the area of Chicago, Guam was the first U. S. Pacific outpost to fall to the Japanese in 1941. Thirty miles in length, from four to eight miles in width, the island lies 1,500 miles east of the Philippines, 5,100 miles west by south of San Francisco. Its native inhabitants are about 23,000 Chamorros, far outnumbered by American military and civilian personnel quartered on the island.

Magellan discovered Guam in 1521. The first Spanish missionaries landed in 1668 and many of the priests and their soldier escorts met violent death in clashes with the natives. By 1710, war and pestilence had cut the native population to 3,678. The United States acquired Guam in the Spanish-American War and put it under Navy Department administration. The Japanese had little trouble seizing Guam on Dec. 12,

1941, and held it until U. S. troops stormed back in July 1944.

Guam's exports, worth \$84,278 in 1941, consist almost entirely of copra (dried coconut meat) and coconut oil. For local consumption, the Guamians grow bananas, pineapple, corn, alligator pears, sweet potatoes and many fruits.

Agana, the capital, with about 12,000 normal population, was a modern little city with all conveniences until it was virtually wrecked in the 1944 fighting. English is the official language but many natives cling to the ancient Chamorro, long since corrupted by borrowed words and constructions. The U. S. government provides good schools under native teachers, and also teaches many crafts ranging from carpentry to cooking.

Two-thirds of Guam's annual sixty-nine inches of rain falls in July and September. The temperature ranges from 70 to 91 degrees, with May and June the hottest months. Occasional severe typhoons ruin crops and flatten huts. Guamians, whose island of 224 square miles is divided into fifteen municipalities, are U. S. nationals but not citizens.

American Samoa

American Samoa, a group of seven main volcanic or coral islands in the South Pacific, became U. S.-owned in piecemeal fashion between 1900 and 1929 when Congress accepted cession of them by their native chiefs. This trend had begun in 1872 when the port of Pago Pago on Tutuila Island, the largest of the group, was ceded to the United States for a Naval and coal-
ing station.

Tutuila is eighteen miles long, with maximum width of six miles, and is largely mountainous. Pago Pago, the capital, is 4,610 miles from San Francisco. The total area of the group is seventy-six square miles, a little larger than Cincinnati, and the 1940 population was 12,908. The climate is tropical with a heavy rainy season from December to March. American Samoa exports annually about 1,100 tons of copra (dried coconut meat) and also taro, yams, breadfruit, pineapples, oranges and bananas. The greatest source of native income is from the making of floor and table mats and hula skirts.

The officer commanding the Samoan Naval station administers the islands, under a system extending jurisdiction down to local native chiefs. The natives, Polynesians of a high type, are on the increase because foreigners are forbidden to buy their land. They read and write and are Christians of various denominations. The islands have thirty-six public schools with about 3,000 enrollment, and six private schools under missionaries.

† Not eligible to succeed himself.

* First Wednesday after first Monday in June following organization.

† Unicameral legislature.

November 3, 1794

William Cullen Bryant born. He wrote "Thanatopsis" at the age of 18. He was editor, and later also owner, of the New York Evening Post from 1826 to his death in 1878, probably a record for continuous editorship.—F. P. A.

On the Futility of Human Endeavor

"Man wants but little here below."
 'Tis thus the poet* sets it;
 And, as too many of us know,
 He generally gets it.

*Goldsmith.—F. P. A.

UNITED STATES GEOGRAPHIC DATA

Source: U. S. Geological Survey and U. S. Bureau of the Census.

Land area of continental United States	2,977,128 sq. mi.
Water area of continental United States	45,259 sq. mi.
Total	3,076,789 sq. mi.
Average area of the 48 states	63,057 sq. mi.
Highest point: Mount Whitney, Calif. ¹	14,496 ft.
Lowest point: Death Valley, Calif. ²	276 ft. below sea level
Most northern point: Lake of the Woods extension, Minn.	49° 23' N. lat.
Most southern point: Cape Sable, Fla.	25° 07' N. lat.
Most eastern point: West Quoddy Head, Maine	66° 57' W. long.
Most western point: Cape Alava, Wash.	124° 44' W. long.
Places farthest apart: Cape Flattery, Wash. to a point on the Florida coast south of Miami.	2,835 mi.
Geographic center: near Lebanon, Smith County, Kans.	{ 39° 50' N. lat. 98° 35' W. long.

¹Inland waters only; 74,364 sq. mi. of the U. S. waters in Great Lakes, Gulf of Mexico, etc., not included in the total area.

²The highest and lowest points in the United States are 86 miles apart.

UNITED STATES FISHERIES RESOURCES

Source: U. S. Department of the Interior.

Region	Fish and fish products	Average "normal" catch in millions of pounds
North Atlantic	Haddock, cod, flounders, herring, mackerel, lobster, oysters, clams. Fillet and frozen fish.	676
Middle Atlantic	Flounders, butterfish, whiting, oysters, crabs. Fish meal and oil.	684
South Atlantic and Gulf Coast	Shrimp, mullet, menhaden, Spanish mackerel, snappers. Fish meal and oil, canned fish.	576
Interior U. S.	Whitefish, catfish, trout.	175
South Pacific	Sardines, tuna, canned fish. Fish meal and oil.	1,173
North Pacific	Salmon, halibut, shark, crabs, oysters. Canned and frozen fish, vitamin oils.	289

FOREST RESOURCES OF THE UNITED STATES

The forests of the United States include over 800 different kinds of trees and still cover millions of acres. But since the days when half of the United States was forest the amount of forest land has decreased by about half and the condition of the remaining forests has deteriorated badly, necessitating a reforestation program.

United States Forest Land, 1940 (in acres)

Old growth	100,832,000
Second growth timber	112,030,000
Cordwood	100,791,000
Fair-satisfactory restock growth	71,306,000
Poor-nonrestocking growth	76,738,000
Total	461,697,000

GREAT SALT LAKE

The Great Salt Lake, largest and best known salt lake in the United States, now covers 1,500 square miles, less than one-tenth its original area. The original lake was formed by the melting of glacial ice. Now, the rivers flowing into it are not sufficient to balance the water lost by evaporation and consequently the lake is shrinking. Its depth varies from 15 to 25 feet.

The saltiness of the Great Salt Lake is

caused by the accumulation of mineral salts from the "fresh" water of the rivers that feed it. Since only pure water evaporates, these salts accumulate. The waters of the lake are believed to contain 400 million tons of sodium chloride (table salt) and 30 million tons of sodium sulfate, plus other chemicals. The Great Salt Lake is about six times as salty as the ocean. It is impossible for a person to sink in its dense water.

THE NATIONAL PARK SYSTEM OF THE UNITED STATES

The National Park System of the United States, administered by the National Park Service, a bureau of the Department of the Interior, embraces a total of 169 areas, containing approximately 20,500,000 acres in federal ownership. Started with the establishment of Yellowstone National Park in 1872, the system includes not only the most extraordinary and spectacular scenic exhibits in the United States proper and in Alaska and Hawaii but also a large number of sites distinguished for their historic or prehistoric importance or scientific interest.

The number and extent of the various types of areas which comprise the system, as of May 18, 1946, are as follows:

Type of area	Number	Federal land, acres	Lands within exterior boundaries not federally owned, acres
National parks	27	11,060,698.50	141,365.77
National historical parks	4	8,155.55	2,124.69
National monuments	86	9,286,512.05	415,184.40
National military parks	11	23,983.44	2,640.37
National battlefield parks	1	684.44	
National battlefield sites	7	248.32	547.65
National historic sites	10	8,176.33	2,171.12
National memorials	9	2,004.63	90.00
National cemeteries	10	217.01	7.50
National parkways	3	55,019.05	45,010.00
National capital parks	1	27,790.36	1,941.00
Total	169	20,473,489.68	611,082.50

The most widely known areas in the system are listed in the following table:

National Parks

Name, location and year established	Area in U. S. ownership, acres	Outstanding characteristics
Glacier (Montana), 1910	997,486.80	Superb Rocky Mountain scenery with numerous glaciers and lakes; forms part of the Waterton-Glacier International Peace Park, established on May 2, 1932.
Grand Canyon (Arizona), 1919	645,084.31	Mile-deep gorge, 4 to 18 miles wide, 217 miles long, of which 105 miles are within the park; fantastically eroded and colored rock masses.
Great Smoky Mountains (North Carolina-Tennessee), 1930	460,882.46	Loftiest range east of the Black Hills and one of the oldest land areas on earth. Outstandingly diversified and luxuriant plant life, often of extraordinary size.
Mammoth Cave (Kentucky), 1936	50,547.51	Historic series of underground passages, 150 miles of which have been explored; beautiful limestone formations; river 360 feet beneath surface; famous for over a century.
Mount McKinley (Alaska), 1917	1,939,199.04	Mount McKinley, highest mountain in North America; large glaciers of the Alaska Range; caribou and mountain sheep.
Mount Rainier (Washington), 1899	241,219.92	Greatest single-peak glacial system in the United States, radiating from the summit and slopes of an ancient volcano; dense forests.
Olympic (Washington), 1938	848,212.30	Finest mountain wilderness of Pacific Northwest.
Rocky Mountain (Colorado), 1915	252,625.87	One of the most magnificent and diversified sections of the Rocky Mountains, with 65 named peaks more than 10,000 feet high.
Sequoia (California), 1890	385,100.13	Great groves of giant sequoia trees, world's largest and probably oldest living things; magnificent High Sierra scenery, including Mount Whitney, highest mountain in United States proper.
Shenandoah (Virginia), 1935	193,472.98	Tree-covered mountains in the heart of the Blue Ridge; scenic Skyline Drive; panoramic views of historic Virginia.
Yellowstone (Wyoming-Montana-Idaho), 1872	2,213,206.55	World's greatest geyser area, with 3,000 geysers and hot springs; spectacular falls and canyon of the Yellowstone River; one of the world's greatest wildlife sanctuaries.
Yosemite (California), 1890	756,294.65	Mountainous region of unusual beauty; Yosemite and other inspiring gorges with sheer granite cliffs; spectacular waterfalls; three groves of giant sequoias.
Zion (Utah), 1919	94,241.06	Multicolored gorge in heart of southern Utah's dramatic desert and canyon country; erosional formations of great height and spectacular carving.

National Monuments

Name, location and year established	Area in U. S. ownership, acres	Outstanding characteristics
Frederica (Georgia), 1945.....	74.53	Fortified settlement established in 1736 by Oglethorpe as English outpost against Florida Spaniards.
McHenry (Maryland), 1939.....	47.64	The successful defense of this fort on Sept. 13-14, 1814, inspired the writing of our national anthem.
George Washington's Home (Virginia), 1930	393.68	Memorial mansion and gardens on the site of Washington's home, Mount Vernon.
Perry's Victory Memorial (Ohio), 1936	14.25	At Put-in Bay Commodore Perry won greatest naval battle of War of 1812; commemorates century of peace between the United States and Canada.
Redwood Forest (Arizona), 1906.....	85,306.00	Most spectacular display of petrified wood known in the world; Indian ruins and petroglyphs; portion of colorful Painted Desert.
Statue of Liberty (New York), 1924....	10.38	Colossal copper statue on Bedloe's Island; a gift of the French Government; commemorates alliance of France and America during American Revolution; universal symbol of freedom and democracy.

National Military Parks

Pittsburg (Pennsylvania), 1895	2,488.17	Battlefield that marks the turning point of the Confederacy; portion of battleground dedicated as burial ground by President Lincoln in his famous Gettysburg Address.
Gettysburg (Virginia), 1926	1,310.41	Scene of the "Battle of the Crater" and of the longest siege in the history of the United States, 1864-1865; about 100 miles of well-preserved earthworks
Shiloh (Tennessee), 1894	3,717.59	Natural park embracing the battlefield of Shiloh near Pittsburg Landing (1862) which prepared the way for Grant's successful siege of Vicksburg; also well-preserved Indian mounds.
Vicksburg (Mississippi), 1899	1,323.56	Remarkably preserved fortifications of 47-day siege of Vicksburg (1863), which gave the North control of the Mississippi River.

National Historic Sites

March to the Sea Campaign (Georgia), 1944	20.96	Marks significant points on the route of Sherman's march from Chattanooga to Atlanta, prelude to the "March to the Sea," which finally trisected the Confederacy.
Federal Hall Memorial (New York), 1893	.49	On this spot, the site of the present Federal Subtreasury Building, stood the famous Federal Hall, the first seat of the new Federal Government, and the scene of many momentous events in the early days of the Republic.
Home of Franklin D. Roosevelt (New York), 1944	33.23	Fine home in the "Hudson River bracketed" style; birthplace, home and "Summer White House" of President Franklin D. Roosevelt.
Independence Hall Custom House (Pennsylvania), 1939	0.79	This building, completed in 1824, is one of the finest American examples of Greek revival architecture; famous as the Second Bank of the United States, which figured prominently in the historic controversy between President Andrew Jackson and the Whigs over national banking policies.
Vanderbilt Mansion (New York), 1940	211.65	Mansion and grounds of the late Frederick W. Vanderbilt overlooking the Hudson River.

National Memorials

Lincoln Memorial (District of Columbia), 1896	0.05	Lincoln died here on April 15, 1865. Has been refurbished to give atmosphere of a typical home of the 1860's.
Great Hill Monument (North Carolina), 1927	314.40	Site of the first sustained flight by a heavier-than-air machine, made by Wilbur and Orville Wright.
Robert E. Lee Memorial (Virginia), 1925	.50	Splendid antebellum home of Robert E. Lee, commander in chief of the Confederate Army.
Emancipation Memorial (District of Columbia), 1922	.61	Classical structure of great beauty with a seated figure, 20 feet high, of the Great Emancipator.
Mount Rushmore (South Dakota), 1929	1,686.40	Colossal figures carved on the face of Mount Rushmore, delineating the features of four great Presidents: George Washington, Thomas Jefferson, Abraham Lincoln and Theodore Roosevelt.
Thomas Jefferson Memorial (District of Columbia), 1943	1.2	Circular colonnaded structure or rotunda in classic style introduced in this country by Jefferson; on interior walls are four panels with inscriptions based upon writings of Jefferson.
George Washington Monument (District of Columbia), 1885	.37	Built in commemoration of George Washington, this monument in the form of an obelisk, is 555 feet high.

National Battlefield Sites

Name and location	Area in U. S. ownership, acres	Pertinent data
Antietam (Maryland), 1890	183.32	Scene of the battle which brought to an end Lee's first invasion of the North in 1862; includes avenues, monument plots, and commands a view of the Burnside Bridge and the sunken road "bloody lane."
White Plains (New York), 1926	.00	Memorials showing the positions held by Washington's army at Battle of White Plains in 1776.

Battleground Cemeteries

(Number: 10; total area: 217.01 acres)

Antietam (Maryland)	11.36	The cemetery is divided into segments, each representing a State. Interments: 4,833 (unidentified, 1,836).
Battleground (District of Columbia)	1.03	On Georgia Ave., between Van Buren and Whittier Sts. Interments: 44.
Fort Donelson (Tennessee), 1867	15.34	Interments: 684.
Fredericksburg (Virginia), 1865	12.00	Interments: 15,260.
Gettysburg (Pennsylvania), 1863	15.55	Interments: 3,785.
Poplar Grove (Virginia), 1866	8.72	Cemetery is on camping ground of the 50th Regiment of New York Engineers. Interments: 6,265 (unidentified, 2,163).
Shiloh (Tennessee), 1866	10.25	Burial place of men who fell at battle of Shiloh and the surrounding area. Interments: 3,653 (unidentified, 2,417).
Stones River (Tennessee), 1865	20.09	Interments: 6,179 (unidentified, 2,560).
Vicksburg (Mississippi), 1865	119.76	Two miles north of city on Highway 61. Includes many who died within a radius of 150 miles from Vicksburg during the War between the States. Interments: 17,450 (unidentified, 12,911).
Yorktown (Virginia), 1866	2.91	Interments: 2,204 (unidentified, 1,446).

A Brief Summary of Naturalization Requirements and Procedure

Source: Immigration and Naturalization Service.

N applicant for naturalization must have been lawfully admitted to the United States for permanent residence. A person cannot become a citizen if he has been admitted for temporary stay only or if he has entered the United States illegally as a stowaway or as a deserting seaman or otherwise without examination.

Under the laws now in force, only persons belonging to the white race, the Negro race, the Chinese race, and races native to North and South America may become citizens by naturalization.

The first step toward becoming a citizen is to make a declaration of intention, commonly called taking out the first paper. An applicant for the first paper must be at least 18 years old and may take out the first paper at any time after arrival as a permanent resident but cannot apply for a second paper until he has lived in the United States for a specified number of years. An alien may apply for the first paper at any place but must apply for a second paper in a naturalization court in the district in which he lives.

A person cannot become a citizen until he is able to carry on an ordinary conversation in English and write his name (unless physically unable to talk or write).

When applying for the first paper, an applicant must fill out Form N-300 and take with him to the Immigration and Naturalization Service together with three 2 inch photographs. The photographs must have been taken within 30 days of the date of the application and must have a light background, be unmounted, and be retouched. They must show head and shoulders only, front view, without

The law requires that every alien be registered and have an alien registration number. Anyone who does not have such a number must take steps to get one from the United States Immigration and Naturalization Service. The alien registration number must be shown on Form N-300.

A person who was admitted as an immigrant on or after July 1, 1928, but before August 27, 1940, should also have in his possession an "immigrant identification card"; that is, a small green card showing his photograph, description, and certain other information.

After the Government receives and examines the Form N-300, the applicant is notified as to when and where to get the first paper. The clerk of the court fills out the first paper, the declaration of intention, using the information the applicant gave in Form N-300. The applicant must sign the first paper before the clerk

of the court and swear that the statements in it are true.

The applicant pays \$3 to the clerk of the court for the declaration of intention.

The first paper does not make an applicant a citizen, but it serves as proof of his lawful residence and is the first step toward citizenship. Many jobs are not open to aliens unless they have taken out a first paper. A first paper is good for only seven years. If an alien has not applied for his second paper before the end of seven years, he must take out another first paper if he wishes to become naturalized.

Some persons may apply for their second paper without having taken out a first paper and without having to reside in the United States five years. Among them are the following:

The husband or wife of a citizen of the United States.

A person 21 years old, but not yet 22, who came to the United States before he was 16 and has lived here ever since.

A person who lived in the United States for at least five years immediately before July 1, 1920, and who, because of misinformation, had reason to believe that he was a citizen.

A person who serves in time of war in the Army or Navy of the United States and, in certain circumstances, a person who serves in the Army, Navy, or merchant marine of the United States in time of peace.

The procedure for filing a petition for naturalization and becoming a citizen is commonly called taking out the second paper. An alien who is required to have a first paper may file his petition for naturalization as soon as his first paper is two years old, provided by that time he has lived in the United States continuously for five years. One must apply for the second paper before the first paper is seven years old.

An applicant must be at least 20 years old to file a declaration of intention with the petition. An alien filing under a section not requiring a declaration of intention may file a petition upon reaching the age of 18.

If a child under 18 has not derived citizenship through his parents, and one of the parents is a citizen, that parent may file a petition in behalf of the child without a first paper.

An applicant must be able to carry on an ordinary conversation in English and to sign his name (unless physically unable to talk or to write). Some courts require that an applicant for a second paper

must be able to read English; the applicant should find out whether the court in his district has such a requirement.

An applicant must have lived continuously in the United States for the number of years required by law; for aliens who are required to have a first paper, that is five years; they must have lived at least the last six months of that five-year period in the state where they apply for the second paper. For wives and husbands of citizens of the United States and some of the other aliens who do not need a first paper it means one, two, or three years, depending on the date of marriage or other facts of the case. Such persons should get further information on this point from the nearest Immigration and Naturalization office.

An applicant must be a person of good moral character. A person who has a criminal record, especially if it is a recent one, may not be able to become a citizen.

The applicant will be asked questions about the history, government, and constitution of the United States. The federal government has textbooks on citizenship to assist applicants for naturalization in preparing to answer these questions. In many places the public schools conduct citizenship classes. These textbooks are furnished free for the use of applicants for naturalization who are attending such classes or who are studying under the supervision of public-school officials. A list of these books may be obtained by writing to the nearest Immigration and Naturalization office. Persons who are not attending public-school classes may purchase the books at a very small cost from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Application for a second paper must be made in the district in which the applicant lives. Application must be made on

Form N-400, which may be obtained from a clerk of the court, a social agency, or the nearest Immigration and Naturalization office.

The applicant must send Form N-400 to the nearest Immigration and Naturalization office and must enclose with it three signed photographs of himself, and his first paper, unless he is among those who do not need a first paper.

The applicant will be notified by the Immigration and Naturalization office when and where to come for his first hearing. The applicant must take with him two citizen witnesses to this hearing. A naturalization examiner questions them separately to make sure the applicant meets the requirements of the naturalization laws. If the examiner is satisfied that the applicant does, he helps him file a petition for naturalization. At this time the applicant pays \$8 to the clerk of the court for the petition and the certificate of naturalization.

Not less than thirty days after the petition was filed, the applicant is notified to appear in the naturalization court for a final hearing to renounce allegiance to the foreign government and to take an oath of allegiance to the United States.

Most judges do not interrogate applicants at this hearing, since a naturalization examiner has already done so, and the judge usually follows the examiner's recommendation in regard to an applicant.

The examiner may recommend that an application for citizenship be granted, denied, or put off until the applicant is better prepared. If the examiner recommends that the petition be denied, notice of this recommendation is sent to the applicant before the case is put on the court calendar for final hearing. The applicant may ask to be examined by the judge in court if he feels that the examiner's recommendation is not just.

Indian Population in Continental United States and Alaska Under Agency Control, 1944

Source: 1944 Census Report.

These data do not represent the actual numbers of Indians residing in each state but number under the jurisdiction of Indian agencies located in the respective states, whether enrolled at agency office or estimated by the Agency Superintendent. The state in which the agency headquarters is located is listed first when the agency extends into two or more states.

*Includes Indian Territory.

Population for Urban Groups and for Rural Territory, 1910 to 1940

Source: U. S. Bureau of the Census.

The urban area is made up for the most part of cities and other incorporated places having 2,500 inhabitants or more. In addition, it includes unincorporated political subdivisions with a population of 10,000 or more and a population density of 1,000 or more per square mile, and in the states of Massachusetts, Rhode Island, and New Hampshire those towns (townships) which contain a village of 2,500 or more, comprising either by itself or when combined with other villages within the same town, more than fifty per cent of the total population of the town.

The remainder of the population is classified as rural and is subdivided into the rural-farm population, which comprises all rural residents living on farms, without regard to occupation, and the rural nonfarm population, which comprises the remaining rural population.

Handfasting," formerly practiced in Scotland, was a temporary marriage solemnized by a verbal pledge of the couple holding hands. The pair were then permitted to live together for a year and a day after which they could either marry permanently or become single again. If a child was born to the couple, it was reported by the party who objected to ending the marriage a permanent arrangement.

The notorious Gretna Green marriages were performed by the village blacksmith, as a rule, although the tollkeeper, ferryman or any other person could officiate. Runaway couples needed only to declare their wish to marry in the presence of witnesses. The practice virtually ended in 1856 when the law required one of the contracting parties to reside in Scotland three weeks prior to the wedding.—*Ency. Brit.*

In 1870, sixty percent of all non-agricultural working women in the United States were domestic servants. Less than one percent held clerical positions, 6.4 percent were in the principal professions and 17.6 percent were factory workers.—*Encyc. Brit.*

Fishing is the oldest industry in the world. About 190,000 people in the United States work for fisheries and fishery industries. More than 90 percent of the sea fish landed in American ports is consumed within 200 miles of the sea.—*Encyc. Brit.*

.....	11,200	7,300	1,740	180	500	130	800	6,750	28,600

*totals of deaths in fixed object collisions are considerably smaller than those shown in editions of Accident prior to 1940, and death totals in non-collision accidents are larger. This is due to transferring to non-collision, those deaths in accidents where the car left the highway and then struck a fixed object. The remaining deaths classified as fixed objects are those which occurred when cars struck fixed objects in roadway, immediately adjacent to rural roadway. This is in accordance with accepted accident definitions.

†totals do not quite equal the sum of the various types because the estimates were generally made only to the nearest 10 deaths, and to the nearest 50 deaths for certain types.

Transportation Accident Death Rates, 1943 to 1945

Source: National Safety Council.

Kind of transportation	1945			1943-45 average death rate
	Mileage*	Deaths	Death rate per 100,000,000 miles*

*Persons on or getting on or off passenger-carrying trains under conditions not constituting trespass are designated as "passengers on trains." Other persons lawfully on railway premises in connection with their journeys by railways are designated as "travelers not on trains."

†Death totals in this column exclude subsequent fatalities and injury totals include them, due to lack of information.

‡The sum of the items in the preceding columns exceeds the figure in the "Total" column because of duplication; e.g., employees killed in grade crossing accidents.

§Including those occurring more than 24 hours after injury.

**Deaths and injuries to passengers on trains and travelers not on trains are combined.

††Excluding subsequent fatalities.

One Accidental Death Every 5 Minutes in 1945

Source: National Safety Council.

The nation's 1945 accident totals can be figured at the following approximate rates:

Class of accident	Deaths	Injuries	One every
All accidents	5½ minutes	3 seconds	
Motor vehicle	18½ minutes	31½ seconds	
Occupational*	33 minutes	16 seconds	
Workers off-job*	18 minutes	12½ seconds	
Home*	15½ minutes	6½ seconds	
Public non-motor vehicle*	34 minutes	17 seconds	

*Civilians only.

"Soda pop" and other carbonated beverages got their start as medicines. "Pop" was introduced in the United States by a Philadelphia doctor who had carbonated water prepared as a medicine for his patients. Later fruit juice was added as a flavor.—*Encyc. Brit.*

¹Law adopted applying to male only; laboratory test authorized but not required.

²Divorce suits may be filed after 2 months' residence, but an additional month must elapse before a decree may be granted.

³Residents 24 hours, nonresidents 96 hours.

⁴One year's residence for divorce based on adultery or bigamy.

⁵Common-law marriage age.

⁶One year where the cause for divorce arose within the state.

⁷Three years on grounds of desertion.

⁸Parties must have married in the state or resided there when offense was committed.

Britain taxed bachelors in 1695 to pay for the war with France. While there has been no direct legislation bearing on bachelors in Britain, they occasionally have been taxed more heavily than others.

The custom of having wedding attendants for the bridegroom began in the days of marriage by capture, when a man called on his friends to help him seize the bride.—*Encyc. Brit.*

Marital Status of the Population, 1940

(15 years old and over)

the average American family was almost persons larger 100 years ago than it is ay. In 1850 there were 5.6 persons in the age family, but by 1940 the number been reduced to 3.8.—*Encyc. Brit.*

Only two-thirds of the inhabitants of the world are enumerated by means of a census. For this reason, the estimate of more than 1,900,000,000 inhabitants of the earth can only be an approximation.

*Less than one-half of one percent.

†Driver violations associated with rural pedestrian actions were infrequent; the most important being unsafe speed, or violation on right-of-way.

‡In rural areas, much the same pattern as in urban accidents is seen. In non-collision accidents speed is by far the most important violation.

The familiar carrot was seldom used as vegetable in the United States before 1941. However, 18,000,000 bush-year were produced, with California, New York and New Jersey the large producers.

Whole milk is eighty-seven percent water. Eggs are 74 percent water; fish, 82.6 percent; peaches, 89 percent; watermelon, 92.4 percent; and even porterhouse steak is 60 percent water.

—Encyc. Brit.

Applies to nonresidents. The term "reciprocal" means that the state will extend to a nonresident the identical privileges granted by his home state to nonresident motorists. In some states visitors must register within specified time. In most states persons who intend to reside permanently must buy new plates and secure new driving license at once, or within a limited period. Acquisition of employment or placing children in public school is often considered intention to reside permanently.

¹None on used cars.

²Until expiration of home registration.

³Three months before current registration expires.

⁴Use tax on new cars, first registration of used cars.

⁵Bill of sale must be filed.

⁶Excise tax.

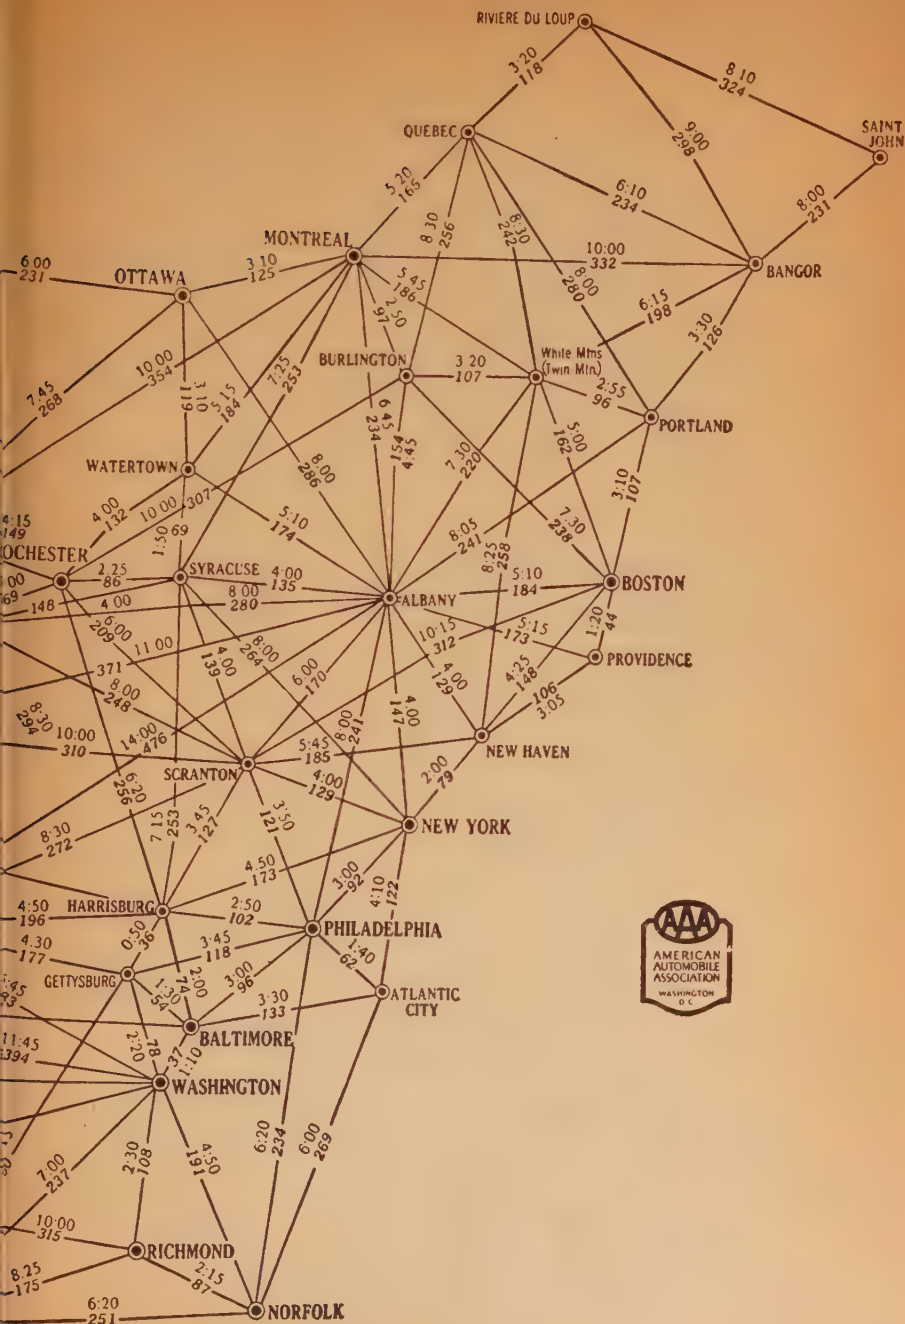

⁷Permit showing compliance with state compulsory liability insurance law must be obtained after 30 days.

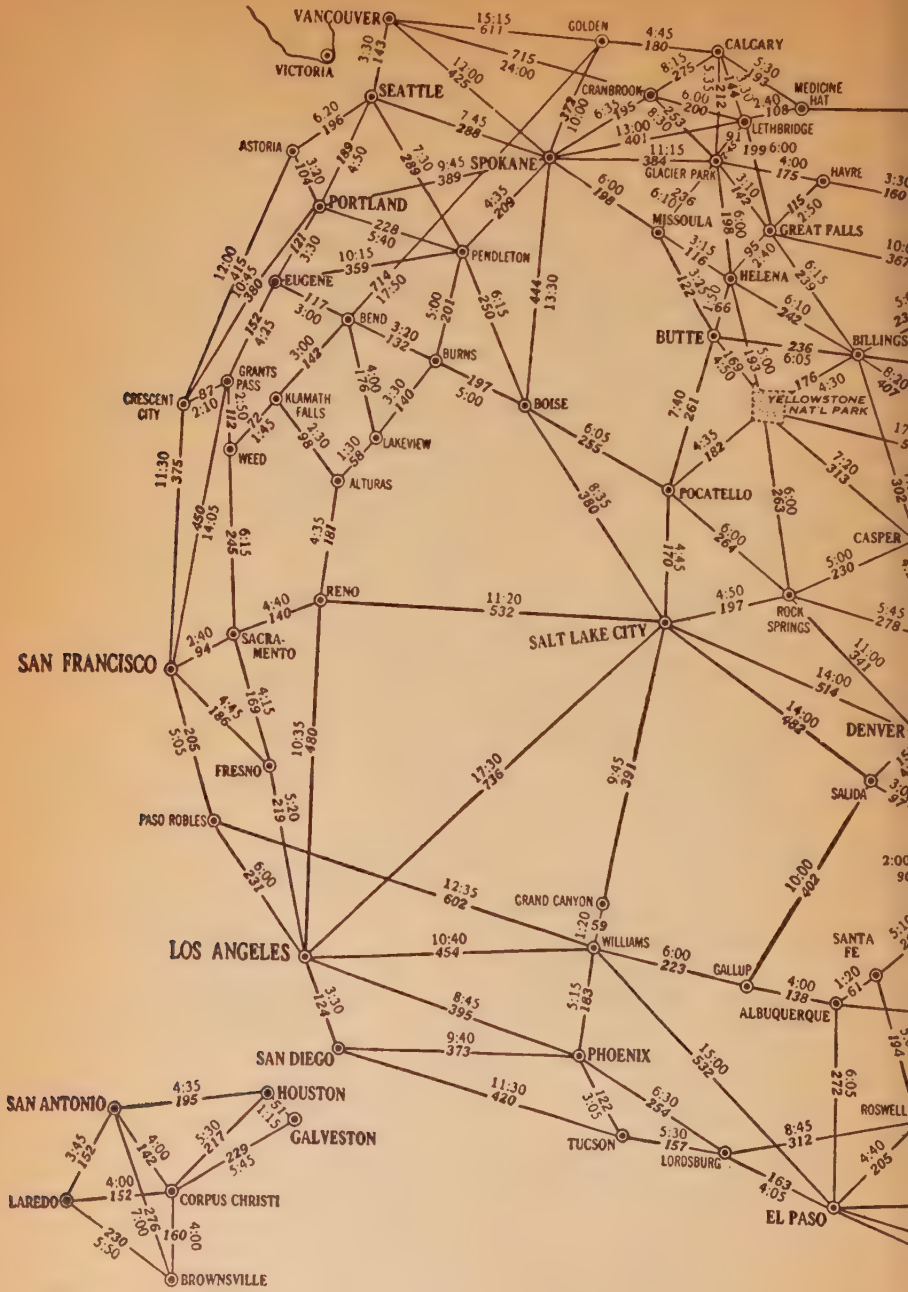

⁸State has compulsory insurance.

⁹For cars not previously registered in state and for those being transferred to another owner.

¹⁰\$15 maximum.

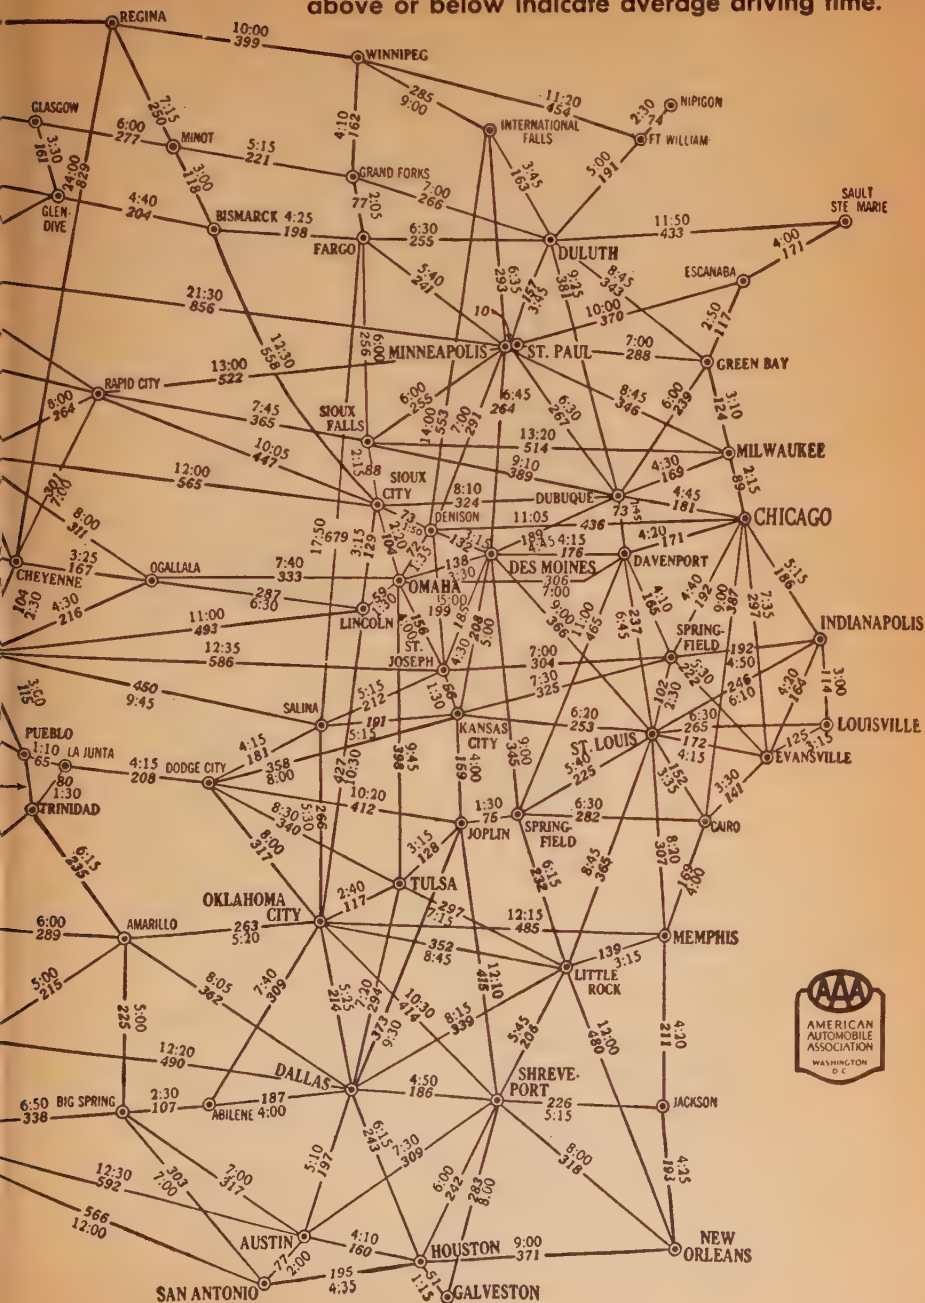

¹¹Registry tax on first registration in state.

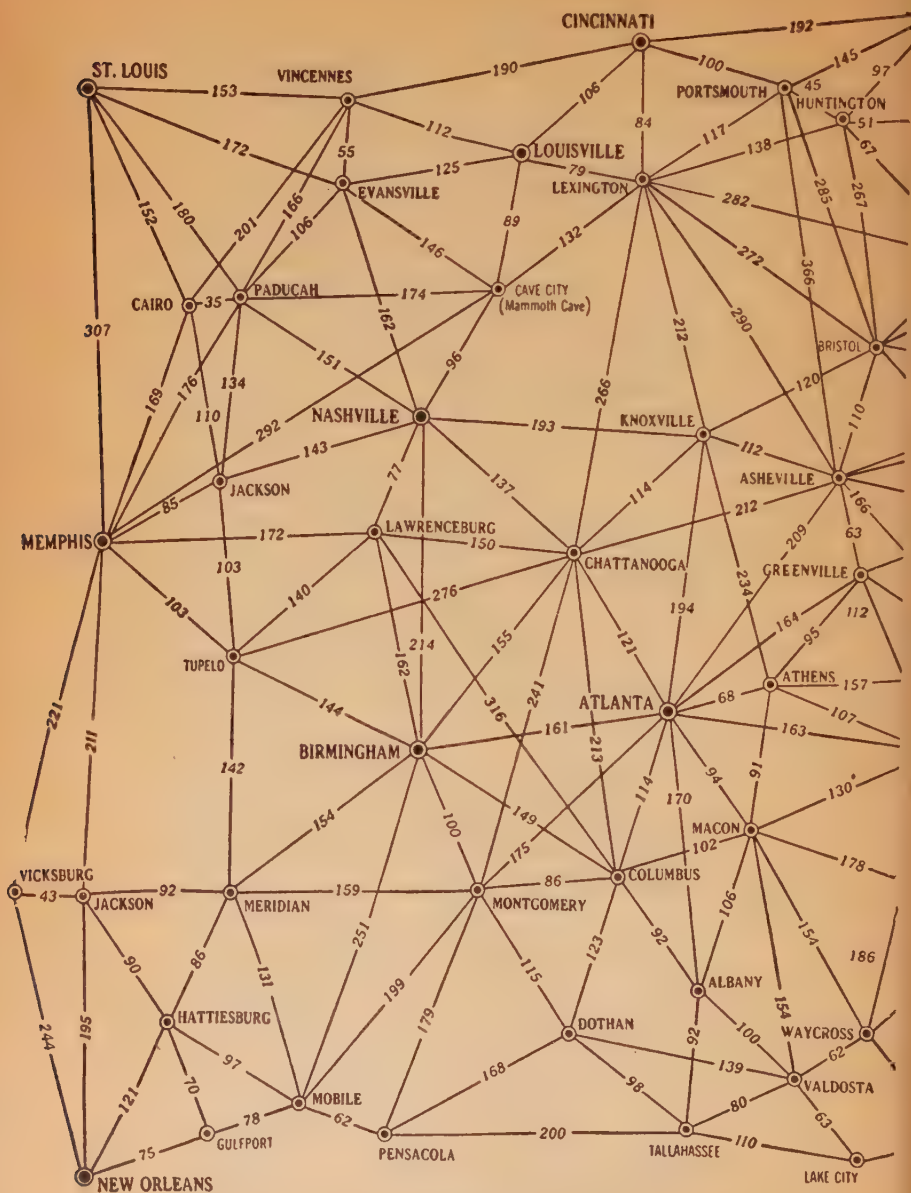

WESTERN MILEAGE CHART

Numerals set into lines indicate mileage. Numerals above or below indicate average driving time.

SOUTHEASTERN MILEAGE CHART

Numerals are mileages between towns.

ELEMENTARY AND SECONDARY SCHOOL STATISTICS, BY STATE, 1944-45

Source: Official State Educational Authorities.

The figures covering teachers do not include either supervisors or the school principal. The figures covering students only include full-time students. The figures on schools include rural schools.

EDUCATION

By LYMAN BRYSON

Professor of Education, Columbia University

Counsellor on Public Affairs, Columbia Broadcasting System

No tables of figures can show the whole picture of education in the United States in 1946 because the college classrooms are bulging with veterans, as yet uncounted, and new forms of education are developing in swift and unexpected ways. The chancellor of one of the greatest of American universities, Robert M. Hutchins of the University of Chicago, has taken a leave of absence to help prepare books for adults to read in the pursuit of self-education and to organize groups where men and women can talk about great ideas. This shows the present importance of education on the level of mature citizenship. In that same effort, the newspaper and magazine press, the cinema, broadcasting, and the museums, libraries and art galleries of the United States are all involved. The generation that did not fight the war is busily trying to understand what happened and what can be done to straighten out the world.

In the meantime, by the provisions of the G. I. Bill of Rights, the veterans of the generation that did fight the war are crowding into the colleges. Many of them have their wives and children with them. Some have to go to colleges set up for their use, like those in New York State, a few men have even broken into the colleges founded and run heretofore for women. The teachers in all these schools have found that the veterans are serious students, not afraid to ask questions, not easily satisfied with stock answers.

No one can predict how long the G. I. students will stick at their difficult task of getting an education. The methods of teaching in the colleges have been only slightly affected by the tricks of conveying information that were developed for war purposes and it is possible that the more leisurely but more really educative ways of the conventional classrooms may try the patience of men who learned quickly for quick application.

College administrators and heads of secondary schools, all over the country, are wondering in the meantime what they are going to do with the young men and women who would have gone to college in normal times and now cannot get in because the veterans are ahead of them. That situation would be somewhat changed if Congress should decree military training. This would relieve the pressure on the colleges. Whether or not it would be in itself "education" is still hotly debated. The military authorities have advocated it for security reasons.

A part of education and one of the major duties of the universities is to add to the sum of human knowledge. In 1946, the universities were aided in the development of a number of major research projects in the physical sciences by large appropriations from the armed services. Facilities for laboratory work left over from the war were in some instances made available for new projects in which the services will have a hand for security reasons but from which the results, it is hoped, will benefit mankind. A good example of this is the nuclear physics laboratory to be set up at Camp Upton on Long Island. It seems unlikely, however, in spite of much discussion that any bill for government subsidies to free scientific inquiry will be passed in the immediate future.

On a par in importance and general interest with the work in the physical sciences, encouraged by the experiments with atomic energy, is the new concern with education and cultural exchanges for international friendship. This is as much a result of the discoveries in physics as were the new laboratories but the interest in education for international collaboration is based more on hope and less on accomplished fact. The high schools and colleges of the country have been more than ever active in the study of foreign relations and other national cultures while the representatives of the great educational societies of the United States have been considering, at the call of the State Department, what part we are to play in the sessions of UNESCO, the United Nations Educational, Scientific and Cultural Organization which met in the autumn of 1946, in Paris.

These things are the superstructure of American education. The safe underpinning of the intellectual and cultural life of the American people, is in the public, parochial and private schools where nearly thirty millions of children learn the ways of American life. These schools, as is shown by the figures, have been for several generations taking care of the earliest needs of a larger and larger proportion of our child population. Since the turn of the century, in spite of two great wars, and through several depressions, the schools have grown in depth and extent of service. In many an American town the public schoolhouse is the finest building. In our greatest cities the schools are still the centers of cohesion and amalgamation where we are forged into one people.

Compulsory School Attendance Laws

On January 11, 1807, was born Ezra Cornell. He became a lumberman. At the age of 35, he became interested in the project of building a telegraph line from Baltimore to Washington. He invented a machine for laying wires underground, but the thing had to be given up because of poor insulation, so at his suggestion the wires were strung on poles. He was instrumental in forming the Western Union Telegraph Company in 1853. He became rich, moved to Ithaca, N. Y., and in 1866, The Cornell University, thus named, was formally opened.—F. P. A.

Selected List of Accredited United States Colleges and Universities—(cont.)

Institution	Location	Founded	Chief Executive	Fac- ulty	Students No. MFO	Vols. in library	Control	Endowment
Florida Southern College	Lakeland, Florida	1885	Ludd M. Spivey	55	1,133 C	35,000	Meth.	\$ 1,000,000
Florida State College for Women	Tallahassee, Florida	1905	Dak S. Campbell	190	2,582 C	106,836	State	206,000
Fordham University	New York, New York	1841	Robert I. Gannon	227	7,500 M	220,544	Cath.	744,700
Fort Hays Kansas State College	Hays, Kansas	1901	Lyman D. Wooster	61	550 C	55,000	State	
Fort Valley State College	Fort Valley, Georgia	1895	C. V. Troup	34	374	12,000	State	
Franklin and Marshall College	Lancaster, Pennsylvania	1787	Theodore A. Distler	35	1,000 M	100,400	Reg.	1,501,650
Franklin College	Franklin, Indiana	1834	William G. Spencer	80	267 C	39,894	Bapt.	1,128,209
Fresno State College	Fresno, California	1911	Frank W. Thomas	32	1,257 C	61,261	State	
Furman University	Greenville, South Carolina	1826	John L. Pyle	48	1,299 C	55,000	Bapt.	834,356
Geneva College	Beaver Falls, Pennsylvania	1848	M. M. Pearce	32	1,100 C	37,697	Presb.	666,450
George Peabody College for Teachers	Nashville, Tennessee	1875	Henry H. Hill	82	1,200 C	454,626	Priv.	5,228,967
George Pepperdine College	Los Angeles, California	1937	Hugh M. Tiner	52	689 C	24,000	Priv.	1,090,000
Georgetown College	Georgetown, Kentucky	1829	Samuel S. Hill	36	422 C	17,000	Bapt.	600,000
Georgetown University	Georgetown, D. C.	1789	Lawrence C. Gorman	350	2,200 C	200,000	Cath.	3,447,650
George Washington University	Washington, D. C.	1821	Cloyd H. Marvin	387	8,200 C	160,000	Priv.	2,484,738
George Williams College	Chicago, Illinois	1890	Harold C. Colfman	24	349 C	22,500	Priv.	224,023
Georgia, University of	Atlanta, Georgia	1801	Harmon W. Caldwell	190	2,550 C	200,000	State	1,200,000
Georgia School of Technology	Atlanta, Georgia	1885	Blake R. Van Leer	190	3,124 M	73,000	State	1,000,000
Georgia State College	Industrial College, Georgia	1891	Benjamin F. Hubert	40	404 C	12,000	State	
Georgia State College for Women	Milledgeville, Georgia	1889	Guy H. Wells	103	1,200 F	36,000	State	
Georgia State Woman's College	Valdosta, Georgia	1906	Frank R. Reade	26	347 F	21,673	State	
Georgia Teachers College	Collegeboro, Georgia	1923	M. S. Pittman	32	393 C	35,000	State	
Georgetown College	Lakewood, New Jersey	1852	Mother Mary J. Constance	32	235 F		Cath.	
Geddyburg College	Geddyburg, Pennsylvania	1832	Henry W. A. Hanson	32	800 C	52,000	Luth.	1,000,000
Glenville State College	Glenville, West Virginia	1875	D. L. Haught	16	376 C	20,000	State	
Gonzaga University	Spokane, Washington	1887	Francis E. Corkery	61	1,001 M	50,000	Cath.	1,502,342
Good Counsel College	White Plains, New York	1923	Mother M. Aloysis	37	277 F	14,659	Cath.	
Goshen College	Goshen, Indiana	1895	Ernest E. Miller	28	301 C	29,139	Menon.	185,653
Goucher College	Baltimore, Maryland	1885	David A. Robertson	70	619 F	82,016	Priv.	2,130,695
Great Falls College of	Great Falls, Montana	1932	J. J. Donovan	45	515 C	32,000	Cath.	
Greensboro College	Greensboro, North Carolina	1838	Luther L. Gobel	39	369 F	26,627	Meth.	566,940
Grinnell College	Grinnell, Iowa	1846	Samuel N. Stevens	64	640 C	116,000	Priv.	2,514,966
Grove City College	Grove City, Pennsylvania	1876	Wair C. Kelter	41	725 C	42,000	Priv.	847,361
Guilford College	Guilford College, North Carolina	1837	Clyde A. Milner	27	395 C	28,000	Friends	668,650
Gustavus Adolphus College	St. Peter, Minnesota	1862	Edgar Carlson	34	541 C	23,386	Luth.	560,436
Hamilton College	Clinton, New York	1812	David Worcester	25	430 M	206,939	Priv.	3,934,343
Hamline University	St. Paul, Minnesota	1854	Charles N. Pace	48	950 C	46,100	Meth.	4,038,684
Hamden-Sydney College	Hamden-Sydney Virginia	1776	E. G. Gammon	12	350 M	34,000	Presb.	388,885
Hampton Institute	Hampton, Virginia	1868	Ralph P. Bridgman	108	1,071 C	72,109	Priv.	9,741,196
Hanover College	Hanover, Indiana	1827	Albert G. Parker, Jr.	17	207 C	43,000	Presb.	1,000,000
Hardin-Simmons University	Abilene, Texas	1891	Rupert N. Richardson	48	1,280 C	35,000	Bapt.	1,256,188
Harris Teachers College	St. Louis, Missouri	1905	Charles H. Philpott	35	644 C	24,323	City	
Harvard University	Cambridge, Massachusetts	1638	James B. Conant	1740	6,826 M	4,702,292	Priv.	156,079,411
Hastings College	Hastings, Nebraska	1882	Wm. M. French	35	380 C	34,000	Presb.	700,000

Selected List of Accredited United States Colleges and Universities—(cont.)

Institution	Location	Founded	Chief Executive	Faculty	Students No. MFC	Vols. in library	Control	Endowment \$
Kansas City, University of	Kansas City, Missouri	1929	Clarence R. Decker	175	3,000 C	133,055	Priv.	1,088
Kansas State Coll. of Agr. and Applied Science	Manhattan, Kansas	1863	Milton S. Eisenhower	325	3,886 C	146,000	State	517,956
Kansas State Teachers College	Emporia, Kansas	1863	James F. Price	83	722 C	83,000	State	722 C
Kansas State Teachers College	Pittsburg, Kansas	1903	Rees H. Hughes	110	1,767 C	88,873	State	256,000
Keene Teachers College	Keene, New Hampshire	1909	L. P. Young	24	250 C	14,500	State	
Kent State University	Kent, Ohio	1910	George A. Bowman	94	2,155 C	78,000	State	
Kentucky, University of	Lexington, Kentucky	1865	Herman L. Donovan	277	4,300 C	367,151	State	189,259
Kentucky State College for Negroes	Frankfort, Kentucky	1886	Rutus B. Atwood	28	475 C	17,000	State	
Kenyon College	Gambier, Ohio	1824	Gordon K. Chalmers	35	278 M	77,500	Priv.	1,910,708
Keuka College	Keuka Park, New York	1890	Henry E. Allen	31	369 F	32,868	Bapt.	375,000
Knox College	Galesburg, Illinois	1837	Carter Davidson	57	640 C	70,000	Priv.	2,700,000
Knoxville College	Knoxville, Tennessee	1875	Wm. Lloyd Limes	24	258 C	13,000	Presb.	500,000
Lafayette College	Easton, Pennsylvania	1832	Ralph C. Hutchison	59	1,000 M	112,557	Presb.	4,130,244
Lake Erie College	Painesville, Ohio	1859	Helen D. Bragdon	27	152 F	34,332	Priv.	815,493
Lake Forest College	Lake Forest, Illinois	1857	Ernest A. Johnson	25	312 C	54,963	Presb.	1,355,100
Lane College	Jackson, Tennessee	1882	Dean S. Yarbrough	18	515 C	10,600	Episc.	30,000
LaSalle College	Philadelphia, Pennsylvania	1863	Brother Emilian	20	136 M	17,960	Cath.	
Lawrence College	Appleton, Wisconsin	1847	Nathan M. Pusey	59	750 C	73,000	Priv.	1,500,000
Lebanon Valley College	Annapolis, Pennsylvania	1866	Clyde A. Lynch	27	400 C	31,240	Breth.	1,000,000
Lehigh University	Bethlehem, Pennsylvania	1865	E. K. Smiley	117	1,471 M	258,000	Priv.	7,287,000
LeMoyne College	Memphis, Tennessee	1870	Hollis F. Price	17	282 C	15,000	Am. Miss.	3,000
Lenoir Rhyme College	Hickory, North Carolina	1891	P. E. Monroe	27	614 C	25,000	Luth.	679,321
Lewis and Clark College	Portland, Oregon	1867	Morgan S. Odell	31	248 C	18,000	Presb.	300,000
Lewiston State Normal School	Lewiston, Idaho	1867	Glenn W. Todd	24	300 C			
Limestone College	Gaffney, South Carolina	1845	R. C. Granberry	34	360 F	21,411	State	
Lincoln Memorial University	Harragate, Tennessee	1897	S. W. McClelland	24	300 C	30,000	Priv.	516,987
Lincoln University	Lincoln University, Pennsylvania	1854	Horace Mann Bond	28	275 M	38,000	Priv.	722,526
Lincoln University of Missouri	Jefferson City, Missouri	1866	Sherman D. Scruggs	57	840 C	47,000	State	1,049,006
Lindenwood College	St. Charles, Missouri	1827	Harry M. Gage	51	512 F	37,000	Presb.	2,477,186
Lindfield College	McMinnville, Oregon	1857	Harry L. Dillin	29	400 C	30,000	Bapt.	1,125,000
Livingstone College	Salisbury, North Carolina	1879	William J. Trent	22	401 C	20,103	A. M. E.	46,500
Long Island University	Brooklyn, New York	1926	Tristram W. Metcalfe	100	1,367 C	97,000	Cath.	1,400,000
Loras College	Dubuque, Iowa	1839	M. J. Martin	70	344 M	17,000	Cath.	
Loretto Heights College	Loretto, Colorado	1891	Paul J. Ketrick	37	303 F	17,000	Cath.	
Louisiana College	Pineville, Louisiana	1906	Edgar Godbold	26	667 C	13,705	Bapt.	319,000
Louisiana Polytechnic Institute	Ruston, Louisiana	1894	Claybrook Cottingham	100	1,938 C	34,025	State	
Louisiana State University and A and M College	Baton Rouge, Louisiana	1860	W. B. Hatcher	416	7,351 C	356,253	State	14,644
Louisville, University of	Louisville, Kentucky	1837	Elmer Wm. Jacobsen	297	5,500 C	127,372	City	1,139,083
Loyola College	Baltimore, Maryland	1852	Edward B. Bunn	23	288 M	35,000	Cath.	2,183,333
Loyola University	Chicago, Illinois	1870	Joseph M. Egan	725	5,795 C	187,292	Cath.	1,417,403
Loyola University of Los Angeles	Los Angeles, California	1911	Thomas J. Whelan	52	708 M	42,000	Cath.	560,000
Loyola University	New Orleans, Louisiana	1912	Edward J. Shields	150	1,526 C	102,476	Cath.	5,000,000
Luther College	Decorah, Iowa	1861	O. J. H. Preus	40	539 C	82,000	Luth.	535,000
Macalester College	St. Paul, Minnesota	1885	Charles J. Turck	58	832 C	40,000	Priv.	2,350,000

McPherson College	McPherson, Kansas	1887	W. W. Peters	20	172 C	15,000	Breth.	397,105
Madison College	Harrisonburg, Virginia	1908	Samuel P. Duke	85	1,285 F	37,565	State	
Maine, University of	Orono, Maine	134	Arthur A. Hauck	134	2,102 C	206,000	State	1,226,400
Manhattan College	North Manchester, Indiana	1889	Vernon F. Schwalm	35	523 C	32,000	Breth.	510,000
Manhattanville College of the Sacred Heart	New York, New York	1853	Brother B. Thomas	60	1,750 M	95,000	Cath.	400,900
Marquette College	New York, New York	1917	Mother E. M. O'Byrne	73	585 F	65,068	Cath.	1,567,882
Marquette University	Marquette, Ohio	1835	William A. Shimer	32	591 C	123,869	Priv.	2,000,000
Marshall College	Milwaukee, Wisconsin	1881	Peter A. Brooks	408	5,340 C	155,000	Cath.	588,000
Mary Baldwin College	Huntington, West Virginia	1837	John D. Williams	84	2,003 C	35,000	State	
Marygrove College	Stanton, Virginia	1842	L. Wilson Jarman	32	320 F	31,000	Priv.	
Mary Hardin-Baylor College	Detroit, Michigan	1910	Sister M. Honora	81	804 F	44,476	Cath.	
Maryland, University of	Belton, Texas	1845	Gordon G. Singleton	50	681 F	61,000	Bapt.	1,100,000
Maryland State Teachers College	College Park, Maryland	1807	H. C. Blackwell	771	5,862 C	183,500	State	2,500,000
Maryland State Teachers College	Salisbury, Maryland	1925	J. D. Blackwell	20	175 C	21,062	State	
Maryhurst College	Towson, Maryland	1866	M. Theresa Wiedefeld	30	273 C	21,000	State	
Marymount College	Marylhurst, Oregon	1930	Sister M. R. Augusta	45	312 F	20,100	Cath.	
Marymount College	Salina, Kansas	1922	Mother M. Chrysostom Wynn	30	251 F	20,100	Cath.	
Marymount College	Tarrytown, New York	1907	M. Therese Dalton	39	450 F	26,750	Cath.	1,000,000
Maryville College	Maryville, Tennessee	1819	Ralph W. Lloyd	37	497 C	50,000	Presb.	1,891,989
Maryville College of the Sacred Heart	St. Louis, Missouri	1872	Mother M. O. Mouton	34	263 F	23,159	Cath.	300,000
Marywood College	Fredericksburg, Virginia	1908	Morgan L. Combs	98	1,406 F	55,000	State	75,000
Massachusetts Institute of Technology	Seranton, Pennsylvania	1915	Sister M. Sylvia	56	531 F	37,000	Cath.	43,100,000
Massachusetts State College	Cambridge, Massachusetts	1861	Karl T. Compton	480	3,000 C	383,738	Priv.	451,629
Massachusetts State Teachers College	Amherst, Massachusetts	1863	Hugh P. Baker	128	1,500 C	137,258	State	
Massachusetts State Teachers College	Bridgewater, Massachusetts	1840	John J. Kelley	40	392 C	25,000	State	
Massachusetts State Teachers College	Fitchburg, Massachusetts	1894	William J. Sanders	41	243 C	18,000	State	
Massachusetts State Teachers College	Framingham, Massachusetts	1839	Martin F. O'Connor	34	453 F	18,000	State	
Massachusetts State Teachers College	North Adams, Massachusetts	1893	Grover C. Bowman	18	75 C	18,000	State	
Massachusetts State Teachers College	Worcester, Massachusetts	1871	Clinton E. Carpenter	20	175 C	16,800	State

Approved Medical Schools in the United States

Source: American Medical Association.

Name and location of school	1947 premedical requirements by years	Number of students 1945-46	Graduates July 1, 1945 to May 31, 1946	Executive officer
University of Arkansas School of Medicine, Little Rock, Ark.	2	248	67	Byron L. Robinson, M.D., Dean
University of California Medical School, Berkeley-San Francisco, Calif.	3	276	73	Francis Scott Smyth, M.D., Dean
College of Medical Evangelists, Loma Linda-Los Angeles, Calif.	3	339	93	Harold Shryock, M.D., Dean, Loma Linda; W. F. Norwood, Ph.D., Dean, Los Angeles
University of Southern California School of Medicine, Los Angeles, Calif.	3	253	63	Burrell O. Raulston, M.D., Dean
Stanford University School of Medicine, San Francisco, Calif.	3	236	..	Loren Roscoe Chandler, M.D., Dean
University of Colorado School of Medicine, Denver, Colo.	3	232	54	Ward Darley, M.D., Dean
Yale University School of Medicine, New Haven, Conn.	3	244	59	Francis G. Blake, M.D., Dean
Georgetown University School of Medicine, Washington, D. C.	3	354	81	David V. McCauley, S.J., Ph.D., Dean
George Washington University School of Medicine, Washington, D. C.	3	325	83	Walter A. Bloedorn, M.D., Dean
Howard University College of Medicine, Washington, D. C.	2	274	58	Joseph L. Johnson, M.D., Dean
Georgetown University School of Medicine, Atlanta, Ga.	3	237	64	Eugene A. Stead, Jr., M.D., Dean
University of Georgia School of Medicine, Augusta, Ga.	3	286	68	G. Lombard Kelly, M.D., Dean
Indiana University School of Medicine, Chicago, Ill.	3	309	68	James J. Smith, M.D., Dean
Northwestern University Medical School, Chicago, Ill.	3	565	155	J. Roscoe Miller, M.D., Dean
University of Chicago, The School of Medi- cine, Chicago, Ill.	3	247	58	A. C. Bachmeyer, M.D., Asso. Dean, Biology Div.; F. J. Mullin, Ph.D., Dean of Students
University of Illinois College of Medicine, Chicago, Ill.	3	647	185	Andrew C. Ivy, M.D., Vice President
Indiana University School of Medicine, Bloomington-Indianapolis, Ind.	3	350	183*	John D. Van Nuys, M.D., Ex. Sec., Admin. Com.
University of Iowa College of Medi- cine, Iowa City, Iowa	3	293	67	Ewen Murchison MacEwen, M.D., Dean
University of Kansas School of Medicine, Lawrence-Kansas City, Kans.	90 sem. hrs.	291	75	Harry R. Wahl, M.D., Dean
University of Louisville School of Medicine, Louisville, Ky.	2	351	91	John Walker Moore, M.D., Dean
Louisiana State University School of Medi- cine, New Orleans, La.	3	310	67	Vernon W. Lippard, M.D., Dean
Louisiana University School of Medicine, New Orleans, La.	3	474	260*	Maxwell E. Lapham, M.D., Dean
Johns Hopkins University School of Medi- cine, Baltimore, Md.	degree	298	76	Alan M. Chesney, M.D., Dean
University of Maryland School of Medicine and Coll. of Phys. and Surgs., Baltimore.	3	359	97	H. Boyd Wylie, M.D., Acting Dean
Boston University School of Medicine, Boston, Mass.	3	247	60	Donald G. Anderson, M.D., Dean
Harvard Medical School, Boston, Mass.	2	492	141	C. Sidney Burwell, M.D., Dean
Massachusetts College Medical School, Boston.	4	410	103	Dwight O'Hara, M.D., Dean
University of Michigan Medical School, Ann Arbor, Mich.	90 sem. hrs.	543	136	Albert C. Furstenberg, M.D., Dean
University of Michigan College of Medicine, Ann Arbor, Mich.	2	252	53	Hardy A. Kemp, M.D., Dean
University of Minnesota Medical School, Minneapolis, Mich.	3	426	126	Harold S. Diehl, M.D., Dean
Louisiana University School of Medicine, St. Louis, Mo.	3	489	124	Alphonse M. Schmittalla, S.J., Ph.D., Dean
Washington University School of Medicine, St. Louis, Mo.	3	361	93	Robert A. Moore, M.D., Acting Dean
University of Nebraska School of Medicine, Omaha, Nebr.	60 sem. hrs.	242	59	Charles M. Wilhelmj, M.D., Dean
University of Nebraska College of Medi- cine, Omaha, Nebr.	3	318	75	Harold C. Lueth, M.D., Dean

Educational Reorganization in U. S.

Source: Encyclopaedia Britannica.

Since about 1910, a very important reorganization of the upper years of the public school systems in the United States has taken place. Instead of the traditional educational organization consisting of eight years of elementary school and four years of secondary school, there has been evolved a six-year elementary school dealing with the fundamental tools and skills, a three-year junior high school with a greatly enriched course of study designed to meet the special biological and psychological and social needs of the young people in their teens, and a three-year senior high school planned for later adolescents. This has substituted a 6-3-3 type of educational organization for the former 8-4 type.

Few fundamental changes in educational organization have been accepted more widely than this; whereas but two cities had organized junior high schools before 1910, and but ten cities before 1910, 198 cities had organized such schools by 1915, 744 cities by 1920, 704 cities by 1924 and

1,109 cities by 1927, hundreds more since.

Another administrative reorganization, and one of great importance to the future of public education in America, is the extension upward of the public school system to include the 13th and 14th years of school life—the freshman and sophomore years of the traditional college. A number of American cities have added these years to their public school system by organizing what has come to be known as the junior college, thus making their public school system a 6-3-3-2 school system.

The final result of such a reorganization will be not only a kindergarten 6-3-3-2 school system, or possibly a kindergarten 6-4-4 plan of organization, but also the dropping of the first two years of work from the traditional college and the transformation of the universities of America into what continental European universities have for long been—a group of professional schools beginning with the junior year.

MUSEUMS in the United States

Art Museums

Albright Art Gallery: 1285 Elmwood Ave., Buffalo 9, N. Y.; Sundays and Mondays, 2 to 6 P. M., other days 10 A. M. to 5 P. M.

Sculpture court, portrait gallery, small sculptures and ceramics 2000 B. C. to 18th century, American painting of 18th and 19th centuries, French paintings of 19th century, religious arts, contemporary art. Library—8,000 vols.

American Academy of Arts and Letters: 633 W. 155th St., New York, N. Y.; exhibitions daily 2 to 5 P. M. except Monday—Spring, May 16 to July 25—Fall, November to February 1948.

Permanent collection of painting and sculpture by members of Academy.

Art Institute of Chicago: Michigan Avenue at Adams, Chicago 3, Ill.; daily 9 A. M. to 5 P. M., Sunday Noon to 5 P. M.; Fee thirty cents, free on Wed., Sat., Sun., Holidays.

World famous paintings and water colors ranging from earliest religious subjects of 13th century to most abstract in modern art. The 19th and 20th century French collection is greatest in the world. Fifty thousand original prints and drawings. Thorne Miniature Rooms. Ryerson Library (art) 40,000 vols., Burnham Library—(architecture) 9,200 vols.

Berkshire Museum: Pittsfield, Mass.; daily 10 A. M. to 5 P. M., Sunday 2 to 5 P. M., closed Mondays.

Original sculpture, painting, objects from Egyptian to modern times; science includes mounted displays, Indian and Eskimo exhibits; historical includes original "One Horse Shay". Special exhibitions of local and national interest.

Brooklyn Museum: Eastern Parkway, Brooklyn 17, N. Y.; daily 10 A. M. to 5 P. M., Sundays and holidays 1 to 5 P. M.

Egyptian, American painting, costume, American rooms, pre-Columbian and American Indian collections. Noted for quality of art, concerts, and other programs of the Education division.

California Palace of the Legion of Honor: Lincoln Park, San Francisco, Calif.; every day 10 A. M. to 5 P. M.

European examples from 14th to 19th century, representative collection of American paintings of the 18th, 19th and 20th centuries, decorative arts of the French 18th century, collections of works of Rodin.

Carnegie Museum: Schenley Park, Pittsburgh, Pa.; daily.

Modern painting and sculpture, only international exhibition of paintings in

the world; exhibitions covering natural sciences and applied arts.

Cincinnati Art Museum: Eden Park, Cincinnati 6, Ohio; daily 10 A. M. to 5 P. M. Sundays and holidays 2 to 5 P. M.

Old and modern paintings, Old Master prints, Meissen porcelain, Nabataean antiquities, Cincinnati interiors of 1800's, American Indian. Library—15,000 vols.

City Art Museum of St. Louis: Forest Park St. Louis, Mo.; daily 10 A. M. to 5 P. M. except Monday, 2:30 P. M. to 9:30 P. M.

Two loan exhibitions monthly, largest collection paintings by Bingham, permanent collection 10,000 pieces of all periods, armor, oriental rugs, textiles Chinese and Japanese art.

Cleveland Museum of Art: Fine Arts Garden, Cleveland 6, Ohio; daily except Monday, 9 A. M. to 5 P. M., Wednesday to 10 P. M.

All forms and periods of all peoples, classical, medieval, modern, oriental, occidental, decorative. Annual exhibition of work of Cleveland artists and craftsmen.

The word "museum" is much older than the thing which it now denotes. Its original meaning is "a temple of the Muses." It could be applied metaphorically to any place where literature and the arts were cultivated.

Science Museums

Academy of Natural Sciences of Philadelphia: 19th St. and the Parkway, Philadelphia, Pa.; daily 9 A. M. to 5 P. M., Sunday to 5 P. M.

Habitat groups of North American, African and Asiatic mammals; exhibits of birds, minerals, and gems as well as earth history. Library—140,000 volumes.

Alabama Museum of Natural History: University of Alabama, Tuscaloosa, Ala.; every day 8 A. M. to 5 P. M.

All fields of natural history with special emphasis on geological exhibits. Also operates Archaeological Museum on an Indian site containing 35 prehistoric Indian mounds. Fee 25 cents.

American Geographical Society: Broadway 156th St., New York 32, N. Y.; daily except Sunday, 9 A. M. to 5 P. M. Contributing memberships.

Library 116,500 vols. and 23,000 pamphlets; map collection—133,300 maps, 2,200 atlases, 29,000 photographs and 2,000 slides. Published "The Geographical Review" and "Current Geographical Publications" (bibliography), and some 70 books in series. Devoted to advancement of geography in its scientific and cultural aspects.

American Museum of Natural History: Central Park West at 79th St., New York 24, N. Y.; daily 10 A. M. to 5 P. M., Sundays and holidays 1 to 5 P. M.

Covers all branches of natural sciences except systematic botany with thorough exhibits of each field. Library—150,000 vols. Conducts expeditionary work.

Arizona State Museum: University of Arizona, Tucson, Ariz.; open during school year.

Covers field of Southwestern archaeology and the living Indian tribes of locale.

Buffalo Museum of Science: Humboldt Park, Buffalo, N. Y.; daily 10 A. M. to 5 P. M., Saturday 9 A. M. to 5 P. M., Sunday and holidays 1:30 to 5:30 P. M.

Exhibits begin with constitution of matter and ending with civilization; Chinese pottery, Babylonian seals, Luistun bronzes, African and South Sea artifacts; collection of 200 first and rare editions of scientific monographs.

Carl Planetary and Institute of Popular Science: Pittsburgh 12, Pa.; daily 1 to 3 P. M. Fee twelve to thirty-eight cents.

Planetary sky shows changed monthly and five exhibit galleries depicting various scientific phenomena and equipment. Demonstration lectures.

California Academy of Sciences: Golden Gate Park, San Francisco 18, Calif.; every day from 10 A. M. to 5 P. M.

Habitat groups North American mammals—36; mounted birds—18 habitat

groups; African Hall of 24 habitat African groups; maintains library and reference collection numbering some four million catalogued specimens.

Chicago Academy of Sciences: Lincoln Park, Chicago 14, Ill.; daily 9 A. M. to 5 P. M., Sunday 1 to 5 P. M.

Habitat groups and systematic exhibits of plants, animals, rocks, fossils of the Chicago region and some groupings of the North American continent.

Chicago Natural History Museum (formerly Field Museum): Grant Park, Chicago 5, Ill.; daily various hours according to season. Fee 30 cents except Thurs., Sat. and Sun.

Covers anthropology, botany, geology, and zoology. Complete displays and exhibits.

Cleveland Museum of Natural History: 2717 Euclid Ave., Cleveland, Ohio; daily 10 A. M. to 4 P. M., Sundays 2:30 to 5:30 P. M.

Collection of 54,000 birds, Upper Devonian fossil fishes, natural history collections including anthropological materials, the most complete mastodon yet found. Sponsors expeditions and results published in brochures.

Colorado Museum of Natural History: City Park, Denver, Colo.; daily 9 A. M. to 4:30 P. M., Sundays Noon to 5 P. M.

Complete groupings by habitat of all phases of natural history. Extensive.

Franklin Institute for the Promotion of the Mechanic Arts: Benjamin Franklin Parkway, Philadelphia 3, Pa.; daily except Monday 1 to 6 P. M., Saturday 10 A. M. to 6 P. M. Fee thirty cents.

More than 4,000 exhibits showing the fundamentals and applications of the physical sciences; planetarium; Library—128,000 vols. and 40,000 pamphlets, including complete patent literature of United States and other nations. Public Observatory.

Hayden Planetarium of the American Museum of Natural History: 81st St. and Central Park West, New York 24, N. Y.; every day various hours. Fee children 35 cents, adults 50 cents daily and 65 cents evenings.

Planetarium Dome one of world's finest in demonstration of stellar movements and Hall of the Sun represents solar system to scale. Permanent exhibits include meteorites, replica of Aztec Calendar Stone, timepieces and astronomical instruments and a large collection of astronomical paintings.

Museum of Science and Industry: Jackson Park, Chicago 37, Ill.; every day except Christmas, daily 9:30 A. M. to 5:30 P. M., Sundays and holidays to 7 P. M.

Eight acres of exhibits dedicated to exhibits and full-sized working models of science and industry. Includes coal mine,

foundry, 3,000-foot electric railway, models of refineries, drydocks, Boulder Dam; various visitor-operated exhibits, theater shows, and static exhibits.

Natural History Museum: Balboa Park, San Diego, California; daily except Christmas, 9 A. M. to 5 P. M.

Public displays and scientific investigations of the natural history of the Southwestern United States and Lower California and Mexico. Over 400,000 specimens of birds, mammals, reptiles, shells, invertebrates and plants kept in working laboratories for use by research students.

New York Museum of Science and Industry: 30 Rockefeller Plaza, New York, N. Y.;

daily 10 A. M. to 10 P. M. Fee children 25 cents, adults 48 cents.

Displays of inventions, instruments and techniques in the field of science and industry.

Southwest Museum: Highland Park, Los Angeles 42, Calif.; every day except Monday from 1 to 5 P. M.

Exhibits and material on the archaeology and ethnology of American aborigines.

United States National Museum (Smithsonian Institute): Mall, Washington, D. C.; every day 9 A. M. to 4:30 P. M.

Contains more than 18 million specimens covering anthropology, biology, geology, engineering and industries, and history, housed in three buildings.

Historical Museums

Chicago Historical Society: Clark St. at North Ave., Chicago, Ill.; daily 9:30 A. M. to 4:30 P. M., Sundays—Spring to Fall 12:30 to 5:30 P. M., Fall to Spring 1 to 6 P. M. Fee 25 cents Sundays.

Forty chronological exhibit rooms from Spanish exploration of the North American continent to date. Lincoln Dioramas and complete Lincolniana. George Washington collection of personal items. Eight Dioramas depicting stages of Chicago development from 1795 to 1893. Library—83,000 vols. and 100,000 manuscripts.

Louisiana State Museum: Jackson Square, New Orleans 16, La.; every day except Christmas, 9 A. M. to 5 P. M.

Seven buildings housing various phases of Louisiana historical development.

Minnesota Historical Society: Cedar and Central Sts., St. Paul 1, Minnesota; weekdays 8:30 A. M. to 5 P. M., Saturdays to 12:30 P. M.

Complete representation of Minnesota's historical development, including paintings, photographs, engravings and objects of interest.

Museum of the American Indian: Broadway at 155th St., Manhattan, New York 32, N. Y.; afternoons except Sundays and holidays 2 to 5 P. M.

Collections of material cultures, handicraft and arts of western hemisphere, indigenous groups from Arctic to Tierra del Fuego including West Indies and

coastal islands. Comprehensive study collections available to accredited students.

New York Historical Society: Central Park West at 77th St., New York 22, N. Y.; daily except Monday from 1 to 5 P. M., Saturdays from 10 A. M. to 5 P. M.

Comprehensive collection early American portraits arranged chronologically, a gallery devoted to American folk arts and crafts, exhibitions on Colonial and Revolutionary New York City; special collections include 467 original water colors of American birds by Audubon and copies of John Rogers statuette groups with 35 originals. Business and professional collection comprises trade and commercial exhibits. Research library—300,000 vols. American history and large collection of maps, prints, newspapers, manuscripts relating to American history.

Rosicrucian, Egyptian, Oriental Museum: Naglee Avenue, San Jose, Calif.; daily 10 A. M. to 5 P. M., Saturdays Noon to 1 P. M., Sundays Noon to 6 P. M.

Devoted to Egyptian antiquities and relics from other ancient civilizations.

Theodore Roosevelt Museum: 28 East 20 St., New York 3, N. Y.; daily except Monday 10 A. M. to 5 P. M., Sundays and holidays 1 to 5 P. M.

Exhibitions of photographs, manuscripts, personal items, etc., housed in restored birthplace of the 26th President—cartoon collection notable.

April 14, 1775

On this day, exactly 90 years before the assassination of Abraham Lincoln, an abolition society was organized in Philadelphia. It was The Pennsylvania Society for Promoting the Abolition of Slavery, the Relief of Free Negroes Unlawfully Held in Bondage, and for Improving the Condition of the African Race. The first president of the society was Benjamin Franklin.—*F. P. A.*

Founder

Benjamin Franklin (1706–1790) was a remarkable organizer. He founded the American Philosophical Society, the University of Pennsylvania, the first circulating library and the first fire-fighting company in Philadelphia; fostered the organization for the establishment of a militia in Pennsylvania. He founded what he called the "Junta," a sort of freemason lodge.—*Ency. Brit.*

A STATISTICAL TOUR THROUGH THE AMERICAN ECONOMY

THIS PORTION of the Information Please Almanac sets its sights for a concise presentation of the essential facts of American business—and, more than that, an understandable dissection of its anatomy and how the components work together to turn out the highest standard of living in the world.

We start by seeing what makes up the American economy, what and how it produces and distributes and serves. Then we explore what it means to people in their work and daily living, what they earn and spend, owe and own.

The statistics you will encounter have been carefully selected and arranged. Where you might want information about other years or about related data you can get it from the official source given at the beginning of each table.

We have tried to make this statistical section more than a reference source for use only when you have a specific question to be answered. We think you can explore this section on your own, page by page, and get an interesting view of the American economy and how it ticks.

Summary Table of Contents

⁴1940 data includes July-December; 1945 data January-September.

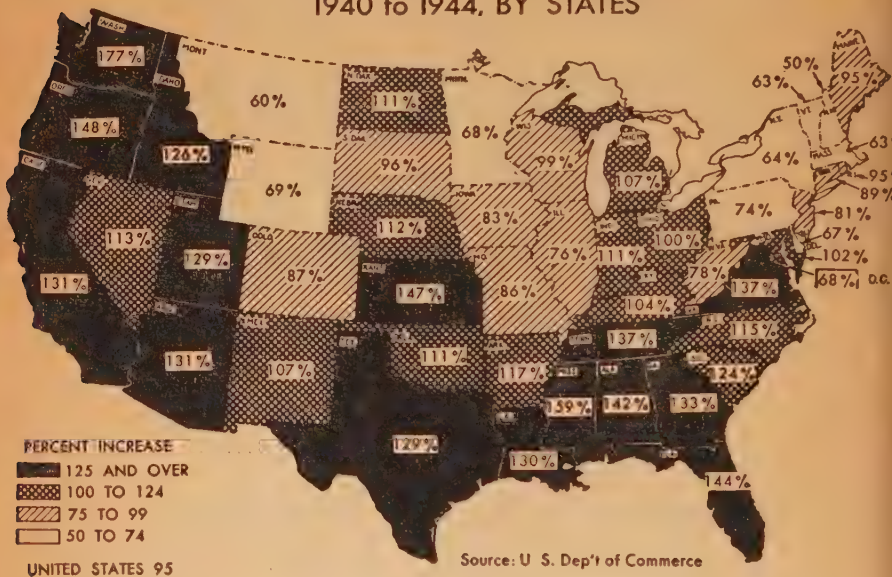

⁵Wednesday nearest end of year.

Section II

DOWN TO EARTH—MAIN CONTOURS OF AMERICAN BUSINESS

In this section we begin to come down to earth after the over-all look we obtained in the opening section. We now get closer to the main contours of the magnificent, complicated structure known as "American Business." We see its comparative anatomy, its make-up by function, by contribution to the national income, by size, and by geographical distribution.

PERCENTAGE INCREASE IN TOTAL INCOME PAYMENTS, 1940 to 1944, BY STATES

Section III

VITAL STATISTICS—BIRTH, LIFE, GROWTH AND DEATH OF
BUSINESS ENTERPRISES

Births, turnover and deaths in American business life are numerous and rapid. There are more than 3,000,000 business enterprises functioning in the U. S. today. Wartime pressures that forced more than half a million small businesses to shut their doors have already been reversed, and the number of American business units is pushing toward an all-time high.

There are some interesting uniformities in the growth, decline and fall of business enterprises. Each year from 400,000 to 500,000 new firms are hopefully launched. But misfortune and turnover are so great among existing concerns that the number of firms going out of business in any year is usually just about the same as the number of new firms beginning operations.

In an average year one out of every six or seven of all existing business enterprises gives up the ghost completely, sells out to new owners, or reorganizes for another try. More than 90 percent of these business deaths involve firms with three or less on the payroll and more than half of those who shut their doors have no employees other than the boss himself.

Statistics like these enable us to figure accurately the average probability of a new firm's remaining alive. Here are the approximate odds. As in most things, the first year is the hardest. Out of every hundred new businesses, about thirty give up the attempt within a year. Another twenty will have called it quits by the third year. Before the decade is out, eighty out of every hundred originals will have surrendered.

This section amplifies these vital statistics in greater detail.

Section IV

WHAT INDUSTRY MAKES

American industry is the most productive in the world. Because of its unsurpassed stock of modern plants, machinery and other productive equipment, the training and efficiency of its more than twenty million workers, and the skillful productive techniques instituted and supervised by intelligent management, industrial output per man-hour in the United States is reliably estimated at approximately twice the British level, three to four times the prewar French and German achievements, and many more times those of other European countries.

Manufacturing is the pivotal industrial occupation, for its periodic expansions and contractions largely determine the level of activity achieved in every other sector of the economy. Depression in manufacturing means unemployment not only for workers in the manufacturing industries, but also for the rest of the working population.

One key statistic highlights the preponderance of manufacturing in the American economy. In the thirty-five year period from 1909 through 1944, the physical volume of manufacturing output increased 496 percent. In the same period, output in minerals rose 254 percent, and in agriculture 167 percent.

Section V

WHAT FARMERS PRODUCE

The United States is universally recognized as the industrial giant of the world. Less well known is the fact that it is also by far the leading nation in agricultural output.

There is every reason to believe that this substantial margin of leadership will continue, even expand. For a technological and scientific revolution is taking place in agriculture which may well be fully as important—and as dislocating—as the industrial revolution of the 18th and 19th centuries. This revolution on the farm involves the greater use of more efficient machinery, the better application of chemical fertilizers and insecticides, the introduction of greatly improved strains of seed, and the beginnings of the new industry of "chemical farming."

A foretaste of this technological progress took place during World War II. Production of all farm commodities went up about 25 percent at the same time that the farm population was dropping almost 20 percent. More machinery made it possible for the average size of American farms to increase about 15 percent.

These are over-all averages. There are extremes which indicate even more sensational possibilities. On the few very large farms which have so far been completely mechanized and operated along mass-production lines, only one-third to one-fifth the amount of labor formerly used is required to produce the same yields.

Such scientific progress solves some problems for the farmer but creates even more complicated problems for society as a whole. Where in a mechanized industrial civilization, itself steadily increasing in efficiency, are the millions that will be displaced by farm mechanization to find jobs?

This section presents part of the statistical framework for these and other agricultural problems. Other portions of that framework will be found in Section IX on "How We Work," Section X on "What We Earn," and Section XII, "What Living Costs Us."

Section VI

WHAT COMMERCE DISTRIBUTES

More than half of the consumer's dollar goes for distribution, less than half of it for production. That is the conclusion of a study by the Twentieth Century Fund, which showed that in 1929 only 41 cents of every dollar spent for goods paid for the services of production, while 59 cents went for the services of distribution. Other investigations confirm this finding that at least 50 percent of the sales price of goods goes for distribution.

These figures are not primarily a sign of the economic waste that can be attributed to elements of American business. They are rather a token of the intricate character of distribution in a mass-production economy. Concealed in them is a significant difference between production and distribution costs. When industrial output rises, production costs per unit almost always decline; but distribution costs frequently increase.

However, since the jump in unit distribution costs is almost invariably less than the drop in unit production costs, the ultimate cost of the product to the final user is still less than it would be at lower levels of output. Whenever this is the case, higher unit distribution costs are still worth while.

Distribution's share of the consumer dollar includes the costs of various business services like advertising and insurance, which are treated in the following section. The present section, deals only with transportation and with wholesale and retail trade. Foreign trade information and statistics will be found in another part of the Almanac.

Section VII

WHAT SERVICES CONTRIBUTE

Manufacturing and agriculture can grow steadily more efficient only because they take advantage of various types of business, professional and scientific services. For example, mass production would be impossible without modern accounting systems; and large-scale agriculture would be almost out of the question without scientific crop and weather services.

At the same time, the service elements in our economy are every bit as indebted to manufacturing and agriculture. Only as production grows more efficient and requires less and less labor per unit of output can the economy support more and more services.

Not only do service activities make business more efficient. They also substantially enrich the American standard of living; give employment to well over ten million persons; and provide a "last frontier" for hundreds of thousands of independent small businesses. Thus, contrary to the gloomy predictions of many nineteenth century economists—both radical and conservative—the growth of industrial civilization has meant the expansion and not the contraction of the so-called middle classes who furnish many of the services described in this section.

Section VIII

WHAT GOVERNMENT DOES AND COSTS

Ever since the Civil War, the role of government in the American economy has been steadily expanding. While probably more citizens have opposed this trend in the United States than in any other major nation, it has persisted. In the last two decades, first depression, and then war and its dislocations, have sharply accelerated the momentum of such government intervention.

The result is that in U. S. A. 1946, one-tenth of the working population is directly employed by federal, state or local governments. In addition, another tenth of the people at work owe their jobs in private business to government activities or expenditures. Combining the work of both groups, roughly one-fifth of the total national output of goods and services can be attributed to the activities of federal, state and local governments.

The costs of running the more than 165,000 government units in the nation are immense. The variety of uses to which the billions of dollars raised in taxes or by borrowing is put is bewildering. This section spreads the central facts and figures before you.

STORY OF A JOB*

* Monsanto Chemical Company, 1945

Section IX

HOW WE WORK

Next to sleeping, man spends more time working than at anything else. The purpose of this section is to tell you at what, how long, how steadily and how efficiently American men, women and children work. It also shows you why workers stop work, how often they quit their job, how often industrial accidents occur, why and for how long workers strike, and how much time is lost from work stoppages.

Results of Strikes in 1945

Source: U. S. Bureau of Labor Statistics.

Result	Strikes Percent of total	Workers involved Percent of total
Total	100.0	100.0
Issues settled at strike termination:		
Substantial gains to workers	24.0	10.8
Partial gains or compromises	11.6	12.8
Little or no gains	16.1	19.4
Indeterminate	3.4	6.1
Issues to be negotiated:		
By parties concerned	20.4	21.4
By Government agencies	20.1	25.1
By private arbitrators	4.1	4.4
Not reported	.3	*

*Less than a tenth of 1 percent.

Section X

WHAT WE EARN

"Who gets the money?" has been a favorite topic for political debate—and more violent action—since the beginning of modern civilization. This sections tells the tale for the American economy. It shows, both absolutely and relatively, how much different groups in the economy—workers, farmers, professional persons, businessmen, movie stars, executives—receive, how large a share of the national income goes for wages and salaries, dividends, interest and profits, and how equitably or inequitably these various forms of income are distributed among American families.

GROSS FARM INCOME: NET INCOME AND PRODUCTION EXPENSES OF FARM OPERATORS 1910-1945

SOURCE: U.S. DEPT. OF AGRICULTURE

Section XI

HOW WE SPEND

What does the American do with the income he receives and the savings he accumulates? In this section, you will find the answers in detail—what we spend for, how much we spend and pay in taxes, and how the spending by all consumers for different commodities and services fluctuates with changes in the nation's income.

Consumer Spending

*Annual rate for first six months.

Total consumer spendings of \$97.8 billion in 1943 were distributed as follows: food and tobacco 37.4%, clothing 15.1%, personal care 1.8%, housing 10.6%, household operation 13.6%, medical care and death expenses 4.8%, personal business 3.1%, transportation 5.8%, recreation 5.1% and other 2.6%.

Who Pays the Taxes*

Source: Temporary National Economic Committee.

NOTE: Data below are only estimates based on scanty factual data, but it does indicate with a high degree of probability the contemporary tax pattern.

Income classes	Taxes as a percentage of income*	Percent of taxes paid by each income class
Under \$500.....	21.9	3.7
\$500 to \$1,000.....	18.0	12.8
\$1,000 to \$1,500.....	17.3	15.0
\$1,500 to \$2,000.....	17.8	12.9
\$2,000 to \$3,000.....	17.5	15.1
\$3,000 to \$5,000.....	17.6	9.7
\$5,000 to \$10,000.....	17.9	6.2
\$10,000 to \$15,000.....	25.5	4.0
\$15,000 to \$20,000.....	31.7	3.6
\$20,000 and over.....	37.8	17.0
Total, all classes.....	20.2	100.0

*Includes imputed taxes. Corporation income and profits taxes and estate, inheritance and gift taxes are added to the income group imputed to pay them. Income estimate includes imputed income from owned homes and home-grown food.

Section XII

WHAT LIVING COSTS US

Complaints about the high cost of living have followed every war. During World War II, the United States had virtually the best record among the major powers for holding down prices. However, since V-J Day the cost of living in the United States has risen faster than in either Great Britain or Canada. But since United States wage rates and other income payments have also gone up faster than in these countries, real living standards in the United States have not suffered correspondingly.

This section gives you the salient details on changes in major prices and the cost of living in the American economy for the last few generations.

*Parity price is the August 1909-July 1914 average price increased by the rise in index of prices paid by farmers, including interest and taxes.

Section XIII

WHAT WE OWN

What and how consumers, businessmen and government units save and invest jointly determines the enduring wealth of the country. Money, stocks, bonds, property of all kinds—these make up the stock of American wealth. The facts about them are statistically summarized and analyzed in the present section. The standard of living which our wealth enables us to enjoy is also itemized and compared with that of other nations.

The following figures on the expanding ownership of modern conveniences point up the rise in American living standards.

Automobiles: 8,000 in 1900; 17,500,000 in 1925; 25,800,000 today.
 Telephones: 1,300,000 in 1900; 16,900,000 in 1925; 27,900,000 today.
 Homes with radios: 3,700,000 in 1925; 30,500,000 today.
 Homes with electric washers: 2,800,000 in 1926; 17,217,000 today.
 Homes with electric ranges: 300,000 in 1926; 3,541,000 today.
 Homes with vacuum cleaners: 4,000,000 in 1926; 13,700,000 today.
 Homes with electric refrigerators: 68,000 in 1926; 19,720,000 today.

United States Paper Currency

There are four kinds of United States paper currency in circulation: silver certificates, national bank notes, United States notes and Federal Reserve notes. Paper currency is issued in the following denominations, the face of the bills carrying portraits as indicated.

\$1	Washington	\$100	Franklin
\$2	Jefferson	\$500	McKinley
\$5	Lincoln	\$1000	Cleveland
\$10	Hamilton	\$5000	Madison
\$20	Jackson	\$10,000	Chase
\$50	Grant	\$100,000*	Wilson

*Probably none in circulation. There is one on display at the Bureau of Printing and Engraving, Washington, D. C.

Section XIV

WHAT WE OWE

Much modern wealth is also debt; one man's asset is frequently another man's liability. For example, while 85 million Americans consider their \$50 billion in war and savings bonds as assets they own, the bonds are also liabilities which, as part of the public debt, must be financed or retired.

This section gives you the basic facts about the development and relationships of three types of debt—individual, business and public—in the United States.

*Figures for 1800 are as of Jan. 1.

Of the \$1,873 million dollars of consumer instalment loans outstanding at the end of June 1946, commercial banks accounted for 37.4%, small loan companies 27.0%, loans insured by Federal Housing Administration for repair and modernization 13.1%, credit unions 8.0%, industrial banks 4.9%, industrial loan companies 4.3% and miscellaneous lenders 5.3%.

United States and the World Economy

U. S. FOREIGN TRADE—The United States, at the beginning of the twentieth century, became the key nation in the structure of the international economy. By far the world's greatest exporting nation, the U. S. averaged about 15 percent of total exports during the period between the two world wars; its share of the world's imports averaged from 12.4 percent in 1928 down to 4.5 percent in 1938, exceeded only by those of the United Kingdom. In raw materials, the United States was the most important supplier.

The United States accounted for about 25 percent of the world's production of manufactured goods during the war years. The industrial output of the United States during the period of 1925-1929 was estimated by the League of Nations at 46 percent of the world's total. In terms of world purchasing power, in 1929, that of the United States was believed to be as great as that of 23 foreign nations combined, including the United Kingdom, Germany, and France.

Table I in the adjoining column represents total United States exports and imports of merchandise from 1918 to 1945. The statistics for foreign trade after 1919 reflect the effects of war and are in a way characteristic of normal commerce rather in quantity, value, or character. Of the tremendous export total in 1944 of \$14,163 million (excluding direct shipments to our armed forces), lend-lease shipments accounted for \$11,298 million. Total im-

Less than \$500,000.

During the twenties the ratio of exports to the total production of movable goods averaged about 10 percent. Table III, showing the ratio between exports and the total production of movable goods, indicates that, while this proportion declined during the thirties and stood at 7.7 percent in 1937, it increased to 12 percent during 1944.

TABLE III

United States Production of Movable Goods, Value of Exports, and the Proportion Exported in Selected Years
(in billions of dollars)

On the other hand, the ratio of United States commodity imports to national income ranged in percentage during the interwar period from a high of 7.6 in 1920 to a low of 3.1 in 1938. During the ten-year period, 1919 to 1928, the average percentage was 5.6 while, during the thirties, it declined to 3.6 percent.

In view of the percentage of movable goods exported and the small ratio of commodity imports to national income there is widespread belief that foreign trade is not important to this country. This view overlooks the importance of export markets to particular industries and the strategic character of many imports. Among its agricultural products the U. S. in 1939 exported 34.4 percent of its output of leaf tobacco, 28.4 percent of cotton (in 1933 the percentage was 65.6), 13.6 percent of lard (34.8 percent in 1933), and 36 percent of dried fruits. Among manufactured products exports accounted for 33 percent of the production of aircraft and parts, 31.6 percent of sewing machines, 22 percent of office appliances, 19.4 percent of tractors and 23 percent of mining machinery. Exports also accounted for 33.6 percent of lubricating oils, 50.1 percent of paraffine wax, 28.1 percent of sulphur, 37.6 percent of carbon black and 33.3 percent of gum turpentine.

Tables IV and V list the principal United States commodity exports and imports from 1936 to 1945:

Military imports	1.1	1.0	155.3	196.1

The exports of the United States reflect the industrial character of the country, 34.4 percent of total exports in 1939 consisting of finished manufactured goods. Semi-manufactured goods accounted for 19.7 percent, so that of total exports 54.1 percent of goods involved a variable degree of industrial processing. Foodstuffs made up 10 percent of total exports, while crude materials such as raw cotton, raw tobacco, crude petroleum and coal accounted for 16.9 percent.

Crude industrial materials represented the most important class of imported goods, amounting in 1939, to 32.7 percent of the total. Foodstuffs followed with 28.5 percent. Semi-manufactured goods constituted 21.4 percent, while our imports of finished manufactured goods amounted to 19.3 percent of the total. The industrial character of our exports was accentuated by the war. Table VI presents a breakdown of United States trade by economic classes of goods exported and imported.

U. S. FOREIGN INVESTMENTS—Before the First World War the United States was a debtor nation on capital account; foreign investments in the United States exceeded United States investments abroad by \$3.7 billions in 1914. World War I, however, completely changed this condition and by the end of 1919, United States investments abroad exceeded foreign investments in the United States by approximately \$3.7 billion. As a result of the great expansion of American foreign investments during the thirties, our net creditor position, excluding war debts, stood at \$8.8 billion in

1930 as compared with \$3.7 billion in 1914.

Foreign holdings in the United States on the other hand, increased tremendously during the period 1933-39. Foreign capital, seeking safety from possible currency devaluation and the uncertainties of war, sought refuge through conversion into dollar holdings. Short-term dollar holdings of foreigners increased \$2.8 billion between 1933 and 1939, while foreign holdings of American securities largely purchased in the stock market, increased by \$1.4 billion. At the end of 1939, the net creditor position of the U. S. had declined to \$1.8 billion

This movement gave way in 1940-41 to reduction of foreign holdings, principally British, to finance war purchases here. After the entry of the United States into the war, however, foreign holdings in the United States increased as government expenditures abroad for the procurement of materials and for the pay and maintenance of troops resulted in substantial acquisitions of dollar balances by foreign countries. Table IX shows the international investment position of the United States, as of September 1944. Since there has been an increase in foreign short-term holdings in the United States since September 1944, it is probable that the net debtor position of this country at the beginning of 1946 is somewhat larger than the \$1.2 billion shown in Table IX.

These increased foreign holdings do not represent permanent investments in this country. They represent funds which were sent here for safekeeping, capital that fled because of fear of war and devaluation. The end of the war found Europe devastated and hungry, needing billions of dollars

worth of goods for reconstruction and rehabilitation. Other areas, not devastated by war, such as South American countries, have a tremendous back log of demand for American products which could not be obtained during the war. These funds which have been built up since 1935, consequently, will shortly be drawn upon to pay for American exports.

INTERNATIONAL BANK—Foreign demands for reconstruction during the post-war period are expected to be so great that accumulated foreign holdings will fall short of what will be required. To overcome the shortage of foreign purchasing power and to supply needed capital abroad, important new credit institutions have been established and the lending power of existing agencies has been increased. The capital and lending power of the Export-Import Bank was increased to \$3.5 billions in July 1945 and the Bank had outstanding foreign commitments of \$1.5 billion at the end of 1945. The President has recommended to Congress that the Bank's lending power be increased by an additional \$1.25 billion.

In addition, the United States has joined with 33 other countries to establish an International Bank for Reconstruction and Development. This was one of the institutions created under the Bretton Woods Agreement, of 1944. The Bank has an authorized capital of \$10 billion to which each member nation must subscribe. The Bank's transactions are limited to its unimpaired subscribed capital, reserves, and surplus.

At present, the total subscription to the capital of the Bank is \$7.6 billion, of which \$3.175 billion represents the subscription of this country. The United States has subscribed 41.78 percent of the Bank's total capital and holds 37.87 percent of its

voting control. The Union of Soviet Socialist Republics, which participated in the Bretton Woods conferences, has not joined either the Bank or the Monetary Fund.

The Bank will supply capital to facilitate the restoration and reconstruction of member countries devastated by war and the development of less advanced member countries. The Bank may operate in three different ways. It may make direct loans out of its own paid-in funds, make loans out of funds raised by selling its own bonds, or guarantee loans made by private investors through ordinary investment channels. Since the paid-in funds will not exceed 20 percent of total subscriptions, it is expected that the operations of the Bank will consist largely of guaranteeing loans made through usual investment channels and of making loans with funds obtained through the sale of its own obligations. The loans guaranteed by the Bank will be floated, for the most part, in this country. Moreover, since the United States appears to be the most abundant source of investment capital, sales of the Bank's obligation will be largely carried out in this country.

FOREIGN EXCHANGE—One of the most obvious differences between foreign and ordinary domestic trade is the fact that the buyer and seller use different currency units. The United States exporter wants payments in dollars; the Brazilian importer uses cruzeiros in making his purchases and sales. The price which the American importer pays for the foreign currency is called the rate of exchange. Like all prices, exchange rates are determined by the forces of supply and demand. American importers offer dollars to the banks in order to obtain foreign purchasing power. Consequently, importers and those who are making foreign payments, such as tourists traveling abroad, persons sending funds to relatives in foreign countries, and businessmen paying premiums to insurance companies abroad, create a demand for foreign currencies. Exporters selling to foreign buyers, motion picture companies receiving royalties on films exhibited abroad and investors receiving interest on foreign investments, create the supply of foreign currencies since the foreign debtor must offer his own currency to obtain the dollars with which to make payment to the American creditor.

A world picture of total supply of and demand for dollars over a period of a year is presented by the annual summary of our international balance of accounts which appears in Table XI.

TRADE AGREEMENTS—The economic warfare of the thirties brought economic distress to all of the nations of the world—to those imposing the trade restrictions as

well as those against whom the restrictions were aimed. This economic warfare was one of the most potent causes of the Second World War.

The realization of this truth has had important results in planning for the post-war period. The United States has taken the lead in proposing the renunciation of economic warfare and a cooperative approach to the restoration of world trade and prosperity. The American plan included the scaling down of tariffs through agreements with other countries under our Reciprocal Trade Agreements program; commitments on the part of the nations of the world to eliminate trade restrictions and interferences of all kinds; formation of an International Trade Organization as an adjunct of the United Nations; the Monetary Fund, established under the Bretton Woods agreements, to promote and encourage international trade by insuring stability of exchange rates and by making available supplies of scarce currencies; a loan program to assist in the reconstruction and development of the countries of the world and to assist important trading nations such as the United Kingdom and France at a time when their international position is likely to be weak because of their tremendous need of imports and their inability to provide through exports the credits required to finance their imports.

The Reciprocal Trade Agreements Act was originally passed in 1934 and was extended in 1945 for a two-year period. Under the provisions of the Act, the President is authorized to seek concessions from foreign countries for American trade and commerce in return for similar concessions granted their products by the United States. The President has the power to increase or decrease tariff rates (under the 1945 extension, those in effect on January 1, 1945) by 50 percent. He may not, however, transfer goods from the dutiable to the free list nor vice versa. Since 1934, reciprocal trade agreements have been concluded with 28 countries, with whom we did 65 percent of our normal foreign trade, and which include eight of our ten best customers in 1937. The effectiveness of the Act in promoting international trade and creating domestic employment is difficult to gauge because of the outbreak of the World War in 1939. However, between the years 1934-35 and 1938-39 our exports to trade agreements countries rose by 63 percent, while our export to non-trade agreements countries rose by only 32 percent. Our imports from agreement countries increased by 22 percent and our imports from non-agreement countries by only 13 percent. The countries with which reciprocal trade agreements have been effected are listed in Table XII.

BRETTON WOODS MONETARY FUND.

The Monetary Fund was established to promote world trade by insuring the stability of foreign exchange rates. Exchange instability had made international trade difficult during the thirties. Member nations under the agreement are bound to maintain stable exchange rates and may not use exchange depreciation as a competitive weapon in seeking to expand foreign markets for their products. No appreciable change in the exchange value of its currency may be made by a member nation without the approval of the Fund, and the Fund's approval will not be given

unless the change in value is necessary to correct a fundamental maladjustment in a nation's international economic position. In addition, the Fund provides for the elimination of exchange controls which had so greatly hampered trade during the thirties. During a transitional period of five years, however, exchange controls may be retained, provided they are administered so as to avoid discrimination against any particular member country.

At present, 39 nations are members of the Monetary Fund and their subscriptions total approximately \$7.4 billions. The United States' subscription is \$2.75 billions, which represents 37.2 percent of the total subscription and this country exercises 33.1 percent of the voting control of the Fund. The Fund is essentially a pool of the world's currencies and exchange rates are stabilized by the Fund's readiness to make available the desired currency of another nation in return for a country's own currency at a fixed rate. Safeguards are provided in the Fund agreement to guard against the depletion of the Fund's supply of a currency which may become scarce—that is, a currency the world demand for which exceeds the available supply. The Fund has not as yet begun operations and initial exchange rates have not been established. Table XIII lists the subscription and voting power of member nations of the Fund and Table XIV foreign exchange rates from 1937 to 1946 as reported by the Board of Governors of the Federal Reserve System.

MAJOR LABOR EVENTS IN 1946

In 1946, the unions pressed their demands, held down during the war under a wage stabilization program. They sought to recoup losses in take-home pay occasioned by the decline in overtime. Strikes swept basic industries in the first half of the year, filtering through the rest of the economy. Many settlements were achieved only by government intervention.

The same release from wartime pressure enabled the Congress of Industrial Organizations and the American Federation of Labor to resume jurisdictional warfare. In all these labor disturbances legislation regulating some aspects of union activity was encouraged for the first time in a decade.

Union Demands and Strikes

Early 1946 found 200,000 members of the United Automobile Workers, CIO, on strike against General Motors. The strike began November 21, 1945 and did not end until March 13, 1946. A fact-finding board, appointed by President Truman, on January 10, 1946, recommended a wage increase of 19½ cents an hour or about 17½ percent, against the UAW demand of 30 percent. On January 28, 1946, the Secretary of Labor designated a special mediator. A final settlement, accepted by the union on March 13, resulted in a 18½ cent increase.

A 30 percent increase thereafter became a general demand. The United Steelworkers of America, CIO, walked out on January 19, 1946, asking a \$2 a day wage increase. The largest strike in the history of the country, it involved 750,000 workers and directly affected 1,200 plants. On January 17, 1946, President Truman, hoping to avert the strike, had proposed a wage increase of 15½ cents per hour as the basis of settlement; this was accepted by the union but the industry replied that existing OPA ceiling prices did not permit the increases. On February 15, 1946, the union and the United States Steel Corporation agreed to a wage increase of 18½ cents per hour, with an average increase in ceiling price of 15 percent, which was announced simultaneously with a revised national wage-price policy.

In the electrical industry 200,000 electrical workers, members of the United Electrical, Radio, and Machine Workers of America, CIO, struck for a \$2 a day increase in 75 plants of the General Electric Company, the Westinghouse Electric and Manufacturing Company, and the electrical divisions of General Motors Corporation. The strike at General Motors was settled on February 9, 1946, on the basis of a 18½ cents per hour increase, while the

company's automotive employees were still demanding 19½ cents per hour. The strikes at General Electric and Westinghouse were long continued, even after conciliators appointed by the Secretary of Labor attempted to mediate. After 115 days, the union accepted 18 cents.

The wage increase pattern of 18½ cents an hour was accepted by the Wage Stabilization Board (successor to the War Labor Board) as an approvable standard; such increases were permitted to serve as a basis for price relief from OPA. Throughout all these strikes, the link between wages and prices was underscored by industry, and the resulting pattern of permissible increases was generally applied to other industries.

In April, John L. Lewis opened negotiations with the coal operators for a renewal of the AFL United Mine Workers' contract, but presented no specific demands. Adopting a new tack, the miners' chief called on the coal operators to accept the principle of an employee welfare fund, after which he would then proceed to bargain as to details. On the refusal of the operators, the coal mines were struck, leading to government seizure. A contract negotiated between the government and the union granted the Lewis demands. The coal mines remained in the hands of the government until the operators would agree to assume the obligations of the agreement.

In May, the Brotherhood of Railway Trainmen and the Brotherhood of Locomotive Engineers, both independent, went out on strike, the central issue revolving around working rules. President Truman's denunciation of the unions and his demand for drastic anti-labor legislation led to the calling off of the strike which had thrown the railroads into confusion.

For the most part, the AFL negotiated quietly, avoiding strikes, its members deriving the benefits of the general 18½ cents pattern. In September, however, the AFL found itself involved in two major strikes, that of the Seafarers' International Union and Local 807 of the Teamsters Union in New York. The SIU had obtained agreement from the employers to grant wage increases higher than those won by the National Maritime Union earlier in the year; but the Wage Stabilization Board refused approval on the ground that the increases would lead to a "second round" of wage demands, thus heightening the inflationary pressure. The effect of the two transportation strikes was to cripple the movement of goods and seriously curtail industrial and business operations. In the end, however, the government amended its wage stabilization policy and approved the seamen's demands.

Union Factionalism

The rift between the AFL and the CIO continued to widen during 1946. The contraction of war industries encouraged both the AFL and the CIO to intensify their jurisdictional disputes. Announcement of a southern organization drive by the CIO was met by the launching of an AFL campaign in the same territory. John L. Lewis's return to the AFL was generally believed to portend an anti-CIO drive by the Federation.

Many CIO unions were torn by factional fights between rightwingers and alleged followers of the Communist Party line which had changed with the expulsion of Earl Browder from party leadership and the return of William Z. Foster. President of the CIO's United Furniture Workers resigned on the ground that the union had fallen under communist domination; similar controversies arose in the United Shoe Workers, the Shipyard Workers, the Coke and Chemical Workers, the National Maritime Union, the Mine, Mill and Smelter Workers. In the United Electrical Workers, an opposition group was organized to oppose the fellow traveler leadership.

The AFL's internal difficulties continued to result from jurisdictional disputes between AFL internationals. As a result, the AFL lost the Amalgamated Lithographers and the Brewery Workers to the CIO. Similarly, the International Association of Machinists withdrew from the AFL but remained independent.

Court Decisions

While there were no startling decisions, two cases did attract considerable attention:

1. **Foremen's unionization under the Wagner Act.** The Sixth Circuit Court on August 12, 1946, sustained NLRB's decision in the Packard case which held that employers must bargain with foremen's unions.

2. **Veterans' superseniority.** On May 27, 1946 the Supreme Court rejected the Selective Service Administration's interpretation of the reemployment provisions of the Selective Service Act. A veteran rehired after his discharge from the armed forces resumes seniority at the "precise point he

would have occupied had he kept his position continuously during the war." Selective Service had argued that the veteran must be retained for one year without regard to the seniority rights of other employees.

Legislation

Labor's position on the legislative front was seriously weakened in 1946. Restrictive legislation of a permanent character—a distinguished from the emergency War Labor Disputes Act—was enacted. The Labor Act, directed at the featherbedding practiced by James C. Petrillo's American Federation of Musicians, became law on April 16, 1946. The Hobbs Anti-Racketeering Act intended to curb certain activities of the Teamsters Union, became law on July 2, 1946.

Major restrictions on labor unions were enacted by Congress in the Case Bill but were vetoed by President Truman. The bill called for a cooling-off period before strikes; compulsory bargaining by union as well as employers; use of employee welfare funds for specified purposes and under joint employer-union control; permitting damage suits for violation of a collective bargaining agreement by either management or the union; issuance of injunction for misconduct during strikes and denial of Wagner Act rights to offenders; outlawing of secondary boycotts; and exclusion of supervisors from the protection of the Wagner Act. The President vetoed this legislation and urged, instead, enactment of emergency legislation permitting government seizure of struck plants and the drafting of strikers who refused to return to work. In addition, the President called for a six-month period in which Congress would have the opportunity to study permanent legislation.

Pro-labor legislation suffered Congressional defeat. Bills to amend the Fair Labor Standards Act, increasing minimum wages, and to establish a Fair Employment Practices Committee died in committee. Labor's major legislative defeat was its failure to maintain an unimpaired OPA, a result of which its real take-home pay, despite the successful strikes, took a further cut in addition to the losses due to reduction in overtime.

Terms Used in Labor Relations

ARBITRATION—Referring disputes between employers and employees to the binding decision of impartial referees, arbitrators, or umpires.

BARGAINING UNIT—A group of employees composed of workers in a single craft, plant, company, area, or industry for purpose of bargaining collectively with their employer or employers. Such units

may be determined by traditional grouping of workers, or by NLRB or a state labor relations board.

BOYCOTT—A concerted effort by union to withhold or induce others to withhold the purchase of goods or services of an employer involved in a labor dispute. *Secondary boycotts* generally apply to union efforts to induce parties not directly

ved in a labor dispute to refrain from organizing the employer with whom the man has a labor dispute.

CERTIFICATION—An official order of the National Labor Relations Board, the National Mediation Board, or a state labor relations board specifying that a union is free from employer domination, includes a majority of the employees in an appropriate unit in its membership, and is authorized to act as the collective bargaining agent for all the employees in the unit.

CHECKOFF—Employer deduction of union dues from the pay envelope of union members and payment of the funds to the union.

CLOSED SHOP—An employer may hire only members of the contracting union and must continue to remain members in order to stand to keep their jobs.

CLOSED UNION—A union which, through high initiation fees or restrictive membership rules, seeks to limit the size of its membership in order to protect their opportunities. (See *Union shop*.)

COLLECTIVE BARGAINING—The process of negotiation between employer and union for the purpose of reaching an agreement as to the terms and conditions of employment for a specified period.

COMPANY UNION—An employee organization whose membership is limited to the employees of a single plant or company. The term is frequently used to denote a company-dominated union, now illegal under the Wagner Act.

CRAFT UNION—Jurisdiction limited to one or several allied skilled trades.

DISCRIMINATION—Unfair treatment of workers in matters affecting their employment status; usually applied to employer discrimination against union members under the National Labor Relations Act, or State Labor Relations Act.

EMPLOYEE WELFARE FUNDS—Funds consisting of employer or joint employer-employee contributions based upon percentage of payroll or number of units deducted, used in behalf of union members for health insurance, hospitalization, vacations, disability, and retirement. Administration of the fund may be by union, employer, or jointly.

FEATHERBEDDING—Union work rules which limit output or utilization of manpower of machines.

ILLEGAL STRIKE—A work stoppage by union members in violation of a no-strike clause, or one which has not been properly called upon or authorized by the proper union officials.

JURISDICTIONAL DISPUTE—A dispute between two or more unions over the right to organize the employees in a particular trade, industry or plant.

LOCKOUT—A shutdown of operations by an employer to secure acceptance of his terms or in protest against union demands.

MAINTENANCE OF MEMBERSHIP—Employees who are union members at the time the contract is signed and those who subsequently join the union must continue their membership as a condition of continued employment during the contract term.

MEDIATION—The process of attempting to reach a settlement or an agreement through the efforts of an outside person or agency such as the U. S. Conciliation Service.

OPEN SHOP—Union membership is not a condition of employment.

PICKETING—Stationing one or more persons of a labor organization at the plant gates or shop doors of an employer during a labor dispute for the purpose of informing the public generally and the employees that a dispute exists, persuading workers to join or continue a strike, and preventing persons from entering or going to work. If large numbers participate in parading or walking up and down in front of the struck premises, this is known as *mass picketing*.

SENIORITY—Job rights based on length of service; measured in relation to other employees, to a particular job or to employment in a department, division, plant, or company.

SHOP STEWARD—A person elected by the employees within a plant or department to represent them in the adjustment of grievances with the employer.

STRIKE—A temporary work stoppage by employees as a form of economic pressure to enforce a demand for wage increases, improved working conditions, or to secure action on a grievance.

UNFAIR LABOR PRACTICES—The National Labor Relations Act defines these as: (1) Interference by employer with, restraint, or coercion of employees in the exercise of their right to self-organization and collective bargaining. (2) Employer domination or interference with the formation or administration of any labor organization or grant of financial or other support. (3) Discrimination in regard to hire or tenure of employment or any term or condition of employment by an employer in order to encourage or discourage membership in any labor organization. (4) The discharge or discrimination of an employee who files charges or gives testimony under the Act. (5) Refusal to bargain collectively with the representatives of employees.

UNION SECURITY—The closed or union shop or maintenance of membership. (See each term.)

UNION SHOP—All employees after hiring or within a specified period must become and remain members of a union.

WORKMEN'S COMPENSATION—Insurance systems established by law in various states providing payment to workers who suffer physical injury during their course of employment, irrespective of carelessness of worker or negligence of employer.

YELLOW-DOG CONTRACT—An agreement signed by an employee with his employer as a condition of employment, setting forth the employee's promise that he would not join a labor union or otherwise participate in any concerted action. Such contracts are now outlawed by the National Labor Relations Board under the terms of the Wagner Act.

Directory of Government Labor Agencies

Department of Labor—Principal operating units are: The Bureau of Labor Statistics, Division of Labor Standards, U. S. Conciliation Service, Wage and Hour and Public Contracts Divisions, Women's Bureau, Children's Bureau. Principal offices—Labor Department Building, Constitution Avenue at 14th Street, Washington, D. C. Secretary of Labor, Lewis B. Schwellenbach.

1. Bureau of Labor Statistics: Acquires and distributes labor information and publishes the results of special studies on various aspects of the labor field, such as wages in different industries; effects of the war on employment, production, and labor conditions; productivity of labor and industry; and industrial relations. This information is issued in special bulletins and in the Monthly Labor Review. The Bureau maintains eight Regional Offices throughout the country with its principal office in the Labor Department Building, Washington, D. C.

2. Division of Labor Standards: Established in 1934 to develop desirable labor standards in industrial practice, labor law administration and labor legislation, and to make specific recommendations concerning methods and measures designed to improve the working conditions and the economic position of wage earners.

3. U. S. Conciliation Service: Under the Director of Conciliation, Edgar L. Warren, the Conciliation Service operates 25 field offices in 21 states with its main office in the Department of Labor Building, Washington, D. C.

4. Wage and Hour and Public Contracts Divisions: Enforce minimum wage and overtime pay requirements of Federal laws. (See *Labor Legislation*.)

5. Women's Bureau: Charged with formulating standards and policies for promoting the welfare of wage-earning women, improving their working conditions, increasing their efficiency, and advancing their opportunities for profitable employment. Chief of the Women's Bureau is Frieda S. Miller, with offices in the Department of Labor Building, Washington, D. C.

6. Children's Bureau: To promote the health, educational opportunity, and welfare of children through studies and reports, consultation service and principally by administration of the child labor provisions of the Fair Labor Standards Act. The chief of the Children's Bureau is Catherine Lenroot, with offices in the Department of Labor Building, Washington, D. C.

National Labor Relations Board—Principal office—Rochambeau Building, 815 Connecticut Avenue, N. W., Washington, D. C. Board consists of Paul M. Herzog, Chairman, John M. Houston, and James J. Reynolds, Jr. The Board maintains 22 Regional Offices.

National Wage Stabilization Board—A tripartite board consisting of employer, labor, and public members, whose function is to prevent inflationary increases in wages. This control is exercised only indirectly without Board approval an employer is barred from using wage increases in an application to OPA as a basis for an increase in the price ceiling. Pay reductions remain illegal under the Wage Stabilization Act unless WSB approval is obtained. Penalties for violation of WSB regulations include disallowance of all illegal wages for tax deduction purposes, thus subjecting employers to heavy financial losses. The Board operates through 12 Regional Offices, with its main office in the Labor Department Building, Constitution Avenue and 14th St., N. W., Washington, D. C. Chairman of the Board is W. Willard Wirtz. Stabilization of salaries is enforced by the Salary Stabilization Unit of the United States Treasury, located in the Bureau of Internal Revenue Building, 12th St. and Constitution Ave., N. W., Washington, D. C. The SSU maintains 14 District Offices with Wilbur A. Gallahan at its head.

National Mediation Board—Composed of three members appointed by the President, not more than two of whom may belong to the same political party. The Board investigates disputes over representation and mediates disputes concerning changes in rates of pay, rules or working conditions of

employees subject to the Railway Labor Act. The Board maintains its principal offices in the Federal Works Building, 18th and F Streets, N. W., Washington, D. C. The Board is composed of Harry H. Schwartz, George M. Cook, and Frank P. Ruglass. (See *Labor Legislation*.)

National Railroad Adjustment Board—Settles grievances and disputes arising out of interpretation of agreements concerning pay, rules or working conditions.

The Chairman of this Board is C. E. Peck and the vice chairman is H. J. Carr.

Collective Bargaining and Union Recognition

Approximately 29 million workers were engaged in occupations in which unions are organizing and obtaining written agreements in 1945. Of these, approximately 14 million workers, or almost 48 percent of those employed in private industry, were covered by union contracts. Although the total number decreased somewhat from 1944, the ratio of those covered by collective bargaining to the total number employed increased slightly from 47 percent to about 48 percent.

In manufacturing industries, slightly over 67 percent (8 millions) of the produc-

tion wage earners were employed under union agreements during 1945 compared with 65 percent in 1944. In nonmanufacturing industries the workers covered by union agreements in 1945 constituted about 34 percent (5.8 millions) compared with about 33 percent in 1944. The types of union recognition granted included closed shop, union shop with or without preferential hiring of union members, maintenance of membership, preferential hiring with no membership requirements, and sole bargaining with no membership requirements.

Labor Organizations

THE AMERICAN FEDERATION OF LABOR

The American Federation of Labor was founded in 1881 as the Federation of Organized Trades and Labor Unions of the United States and Canada, changing its name in 1886. Its basic approach was to organize workers by crafts and skills, rather than by geographical area as was the practice of the Knights of Labor which the AFL was successful in replacing. The present organizational structure is practically identical with that set up under the leadership of Samuel Gompers, president of the Cigar Makers International Union. The AFL is financed by per capita dues from each of the affiliated international unions which are autonomous, self-governing bodies. The Federation, however, has authority to fix the jurisdiction of its affiliated internationals, though it is not always able to enforce decisions. Federation officers are elected by annual conventions. The governing body between conventions is the Executive Council, elected by the convention. The AFL now consists of a little more than 100 international unions, claiming a membership of approximately 7,400,000. Its principal activities are to aid constituent unions in organizing and bargaining, to promote or oppose legislation, litigate test cases in court, watch interpretation and enforcement of laws, represent its affiliates in tripartite government agencies, and act for its membership in international bodies. It also operates through city and state federations, and through councils or

departments of allied crafts. The AFL has refrained from tying itself up too closely with any political party or government administration. Most constituent AFL unions are craft unions although a number are industrial. By extension into a number of industries some of the original craft unions have become mixed unions. The Brotherhood of Painters, Decorators, and Paper Hangers of America, AFL, is an illustration of a craft union whose jurisdiction includes building construction and maintenance work in establishments in many industries. The address of the American Federation of Labor is 901 Massachusetts Ave., N. W., Washington, D. C.

OFFICERS COUNCIL OF AFL—1946

William Green	President
W. L. Hutcheson	First Vice President
Matthew Woll	Second Vice President
Joseph N. Weber	Third Vice President
G. M. Bugniazet	Fourth Vice President
Geo. M. Harrison	Fifth Vice President
Daniel J. Tobin	Sixth Vice President
Harry C. Bates	Seventh Vice President
W. D. Mahon	Eighth Vice President
Felix H. Knight	Ninth Vice President
W. C. Birthright	Tenth Vice President
W. C. Doherty	Eleventh Vice President
David Dubinsky	Twelfth Vice President
John L. Lewis	Thirteenth Vice President
Martin Durkin	Secretary-Treasurer

CONGRESS OF INDUSTRIAL ORGANIZATIONS

The Congress of Industrial Organizations resulted from a split in the American Federation of Labor. In order to organize the mass production industries, leaders of the industrial unions within the AFL won approval at the Federation's San Francisco convention in 1934 of a resolution endorsing industrial unionism in the automobile, cement, aluminum, and other mass-

production industries. Failure of the AFL to organize the mass-production industries finally brought on a crisis at the 1935 convention at Atlantic City. Less than a month after this convention closed, led by John L. Lewis, Sidney Hillman, and David Dubinsky, the United Mine Workers, the Amalgamated Clothing Workers, the International Ladies Garment Workers

Union, the United Textile Workers, the Oil Field, Gas and Refinery Workers, the International Union of Mine, Mill, and Smelter Workers founded the Committee for Industrial Organization. Other industrial unions shortly joined the Committee. In January, 1936, the Executive Council of the AFL ordered the CIO to dissolve and in August, upon its refusal to do so, suspended the ten unions. Disagreement on the desirability of reunification of labor led the ILGWU to return to the AFL, with John L. Lewis' UMW following suit later.

At present the Congress of Industrial Organizations includes more than 40 international unions with a claimed membership of 6,500,000. The CIO has emphasized legislation as an aid to organization and collective bargaining drives. It has also formed a Political Action Committee whose chief purpose is to give systematic political support to candidates seeking public office whom it regards as pro-labor.

The CIO is financed by per capita dues from each of the affiliated international unions which are autonomous, self-governing bodies, as in the AFL. Unlike the AFL, however, the parent organization has greater influence over the decisions of the individual unions. The CIO is governed by a General Executive Board, consisting of a representative from each of the international unions. A smaller body of officers is elected by the annual convention. CIO headquarters are located at 718 Jackson Place, Washington 6, D. C.

OFFICERS OF CIO—1946

Philip Murray	President
R. J. Thomas	Vice President
Walter P. Reuther	Vice President
L. S. Buckmaster	Vice President
Joseph Curran	Vice President
Albert J. Fitzgerald	Vice President
John Green	Vice President
Allan S. Haywood	Vice President
Emil Rieve	Vice President
Frank Rosenblum	Vice President
James B. Carey	Secretary-Treasurer

INDEPENDENT UNIONS—It is generally estimated that 2,000,000 workers are organized in independent unions, many of them operating only as company- or plant-wide unions. Some are loosely united in the Confederated Unions of America, whose central headquarters are located at 809 "I" Street, N. W., Washington, D. C. The most important of the independents, however, are organized much like the international unions of the AFL and CIO, some of them having withdrawn from the AFL.

1. **Railroad Brotherhoods.** The most prominent of the railroad unions are the four independent train service unions, commonly referred to as the "Brotherhoods." Labor organization in the railroads is predominantly along craft or occupational lines. The "Big Four" unaffiliated

unions represent craft elements in the industry. They include the Brotherhood of Locomotive Firemen and Enginemen, Brotherhood of Railroad Trainmen, Grand International Brotherhood of Locomotive Engineers, and the Order of Railway Conductors of America. Membership figures for the "Big Four" unaffiliated unions are as follows: Railway Conductors—36,360; Locomotive Firemen and Enginemen—11,732; Railroad Trainmen—215,872; Locomotive Engineers—76,589. All told, however, there are about 1,400,000 employees on Class 1 railroads and some 23 so-called standard railroad unions. All except about 70,000 employees are covered by union agreements, so that approximately 95 per cent were employed under contracts.

The railroad unions, except for the Railroad Trainmen and the Locomotive Engineers, attempt some form of united action through the Railway Labor Executive Assn., which includes some AFL unions.

2. **International Association of Machinists.** The International Association of Machinists, claiming a membership of 625,000, was formerly affiliated with the American Federation of Labor. After one withdrawal it was readmitted into the AFL during the 1944 convention, but withdrew again in 1946 as a result of a jurisdictional dispute with the Brotherhood of Carpenters and the Sheet Metal Workers International Association. IAM Hqt. are at 9th St. and M Vernon Pl., N. W., Washington, D. C.

3. **Foreman's Association of America.** Union membership of foremen received its impetus in the mass production industries. The organization of supervisors became an active issue after the effective organization of production workers by the newly organized industrial unions. In 1941, foremen from numerous Detroit automobile plants organized an independent union, the Foreman's Association of America, which later expanded its membership into other industries and areas. FAA obtained a contract from the Ford Motor Company in 1943 but met with resistance from other auto manufacturers. Organizational activities were aided by the decision of the National Labor Relations Board in 1944 holding that foremen were entitled to bargain collectively under the Wagner Act. FAA claims a membership of 28,000 in 28 locals. Its headquarters are located at 51 Barlum Tower, Detroit, Michigan.

4. **National Federation of Telephone Workers.** Telephone workers, organized in local independent unions, formed the National Federation of Telephone Workers in 1939, now claiming about 150,000 members. The Federation in 1946 examined the question of affiliation with the AFL or CIO and though it received a better offer from the latter, it nevertheless decided to remain independent. Its national headquarters are at 306 North Charles St., Baltimore, Md.

THE FEDERAL TAX SYSTEM

The Internal Revenue Code is the basic tax law of the Federal Government. Although it provides for many types of taxes such as gift, estate, manufacturers' excise, document, etc., its chief feature is the income tax, both individual and corporate.

Individual Taxes

Individual tax rates for the calendar year 1946 are: normal tax at 3 percent, and surtax scaled from 17 percent to 88 percent in accordance with the following table:

Surtax net income		Surtax rates	
Not over \$2,000	17% of the surtax net income		
Over \$2,000 but not over \$4,000	\$340 + 19% of excess over \$2,000		
Over 4,000 " " " 6,000	720 + 23% " " " 4,000		
Over 6,000 " " " 8,000	1,180 + 27% " " " 6,000		
Over 8,000 " " " 10,000	1,720 + 31% " " " 8,000		
Over 10,000 " " " 12,000	2,340 + 35% " " " 10,000		
Over 12,000 " " " 14,000	3,040 + 40% " " " 12,000		
Over 14,000 " " " 16,000	3,840 + 44% " " " 14,000		
Over 16,000 " " " 18,000	4,720 + 47% " " " 16,000		
Over 18,000 " " " 20,000	5,660 + 50% " " " 18,000		
Over 20,000 " " " 22,000	6,660 + 53% " " " 20,000		
Over 22,000 " " " 26,000	7,720 + 56% " " " 22,000		
Over 26,000 " " " 32,000	9,960 + 59% " " " 26,000		
Over 32,000 " " " 38,000	13,500 + 62% " " " 32,000		
Over 38,000 " " " 44,000	17,220 + 66% " " " 38,000		
Over 44,000 " " " 50,000	21,180 + 69% " " " 44,000		
Over 50,000 " " " 60,000	25,320 + 72% " " " 50,000		
Over 60,000 " " " 70,000	32,520 + 75% " " " 60,000		
Over 70,000 " " " 80,000	40,020 + 78% " " " 70,000		
Over 80,000 " " " 90,000	47,820 + 81% " " " 80,000		
Over 90,000 " " " 100,000	55,920 + 84% " " " 90,000		
Over 100,000 " " " 150,000	64,320 + 86% " " " 100,000		
Over 150,000 " " " 200,000	107,320 + 87% " " " 150,000		
Over 200,000	150,820 + 88% " " " 200,000		

The total of normal tax and surtax is reduced by 5 percent to give the actual tax due. For example, if the normal tax and surtax equal \$100, the taxpayer will pay \$95 less 5 percent, or \$95, not \$100.

(No individual need pay a total tax greater than 85.5 percent of his net income.)

Deductions:

In computing taxable net income, the taxpayer has the choice of using either the actual deductions incurred by him, such as: interest, taxes, contributions, etc., or the optional standard deduction. The optional deduction is used in place of actual deductions and amounts to roughly 10 percent of the taxpayer's income after business and employment expenses have been deducted. However, it may never exceed \$500.

Exemptions:

The same exemptions are allowed in calculating both the normal tax and the surtax. The taxpayer is entitled to a \$500 exemption for himself and each of his dependents. To claim someone as a dependent you must furnish over half the money for his support, his taxable income

must be less than \$500, and he must be closely related to you. These are considered "close" relatives:

Son and daughter (including an adopted child), grandchild, great-grandchild, etc.

Stepchild

Son-in-law and daughter-in-law

Parents, grandparents, etc.

Stepfather and stepmother

Father-in-law and mother-in-law

Brother, sister, half-brother, half-sister

Brother-in-law and sister-in-law

Uncle, aunt, nephew and niece (but not if related to you only by marriage)

The taxpayer's wife is entitled to a \$500 exemption for normal tax and for surtax, whether on a separate or a joint return. But the husband may claim his wife's \$500 exemption on his separate return if she has no income and is not claimed as a dependent by another taxpayer.

How income tax is collected:

To keep the collection of individual taxes on a current basis, two devices are used: (1) the withholding tax and (2) the declaration and payment of estimated tax. Withholding simply makes employers agents of the government in collecting taxes from employees. Through the use

of withholding tables, the tax on an employee's salary is roughly calculated. A proportionate amount of the tax is then deducted from each payment of salary to the employee. If at the end of the year, it appears that too much has been withheld, the employee gets a tax refund; if not enough has been withheld, the employee sends in the difference with his tax return.

Since the wage withholding method doesn't place on a current basis taxpayers receiving dividends, interest, profits from business, etc., and wage earners whose tax will exceed the amount withheld on wages, these taxpayers file a declaration at the beginning of the year estimating their current year's taxes and pay it in quarterly installments. Just as in the case of withholding, any overpayment or underpayment of tax is adjusted in the return covering the entire year.

Who must file a return:

If you've earned \$500 or more during the year you must file a return. This is required whether you're single, married, divorced, widowed or under 21. Also, if you earned less than \$500 but received other income from interest, dividends, rents, pensions, etc., which brings your income up to \$500, a return is required.

Members of the armed services below the rank of commissioned warrant officer do not include any of their military or naval pay in deciding whether to fill out a return. Officers exclude the first \$1,500 of service pay in deciding if they file.

What form to use:

FORM W-2. There are two possible forms—1040 or W-2. Form W-2 is the familiar withholding receipt. Any taxpayer may choose to use Form 1040, but only a taxpayer who meets certain requirements is eligible to use Form W-2. These requirements are as follows:

1. His total income must be less than \$5,000.
2. His income must be derived entirely from wages, dividends, or interest.
3. His income from sources other than wages subject to withholding must not exceed \$100.
4. His return must not be made for a fractional part of a year because of a change in accounting method.
5. He cannot be a nonresident alien.
6. He cannot claim special tax treatment because his income is mainly derived from sources within United States possessions.

If a husband and wife file a combined return on the withholding receipt, the combined income must meet the first three tests. If a wife files a separate withholding receipt, the husband must either use his

receipt as a return, use the tax table method of figuring the tax on the regular form, or use the optional standard deduction if his income is over \$5,000.

Taxpayers who are eligible to use Form W-2 need answer only a few simple questions appearing on it, and let the collector compute the actual amount of tax liability. This computation will be on the basis of the tax table which is part of Form 1040, and which automatically allows the standard deduction of approximately 10 percent. If any additional tax is due, the collector will send the taxpayer a bill for that amount. This bill must be paid within thirty days after it has been mailed by the collector. If the amount of taxes withheld from wages plus any amount paid as an estimated tax exceed the total tax due, then a refund will be sent.

If the taxpayer has received more than one receipt for income tax withheld during the year (either the old or the revised Form W-2), he must use the last one received as his return, and must attach the others to it. If a husband and wife file a combined return on Form W-2, all receipts which were given to both of them must be attached. If any receipt is missing and the taxpayer cannot obtain a duplicate from his employer, he must file a return on Form 1040.

FORM 1040. Every individual who does not meet *all* the requirements for using Form W-2, or who wants to make his own computations, must use Form 1040. If his adjusted gross income is less than \$5,000 (regardless of source), and if he meets requirements (4), (5), and (6) listed under Form W-2 (above), he may convert the form into a "short" form by tearing off pages 3 and 4, filing only pages 1 and 2. If he does so, he must use the tax table method of computing his tax liability.

Partnerships:

A partnership as such does not pay tax. Instead the individual partners pick up their share of the partnership net profit or loss and report it in their individual returns.

Estates and trusts:

Every fiduciary (except a receiver who is in possession of only part of an individual's property), or one or two or more joint fiduciaries must file a return for the following individuals, estates and trusts for which he acts:

- (a) Every individual whose gross income for the taxable year is \$500 or more;
- (b) Every estate which has a gross income of \$500 or more;
- (c) Every trust which has a *net* income of \$100 or more, or which has a *gross* income of \$500 or more;
- (d) Every estate or trust of which a beneficiary is a nonresident alien.

Corporation Taxes

Corporations are now subject to the following tax rates:

Earnings up to \$25,000

Normal tax	
First \$5,000	15%
Next 15,000	17%
Next 5,000	19%
Surtax	6%

Earnings between \$25,000 and \$50,000

Normal tax	\$4,250 plus 31% of normal tax net income over \$25,000
Surtax	\$1,500 plus 22% of surtax net income over \$25,000

Earnings over \$50,000

Normal tax	24%
Surtax	14%

There is no longer an excess profits tax, capital stock tax or declared value excess

profits tax. However, the 27½ percent-38½ percent penalty surtax on corporations which unreasonably accumulate earnings to avoid the surtax on individual stockholders is still in effect.

Gift Tax

Individuals who make gifts are subject to a gift tax based on the value of the property given. However, exemption is provided for a certain amount of gifts and the tax does not apply until the exemption is exceeded. The exemptions work this way:

During his lifetime, an individual may give away \$30,000 taxfree. In addition, the first \$3,000 of gifts made by him to each person in any one year is also exempt. For example, a taxpayer may give his wife and child \$3,000 apiece each year without incurring gift tax and without using up any of his \$30,000 lifetime exemption.

After deducting exemptions, the value of gifts is taxed at the following rates:

(A)	(B)	(C)	(D)
Amount of net gifts equaling—	Amount of net gifts not exceeding—	Tax on amount in column (A)	Rate of tax on excess over amount in column (A) Percent
.....	\$ 5,000	2¼
\$ 5,000	10,000	\$ 112.50	5¼
10,000	20,000	375.00	8¼
20,000	30,000	1,200.00	10½
30,000	40,000	2,250.00	13½
40,000	50,000	3,600.00	16½
50,000	60,000	5,250.00	18¾
60,000	100,000	7,125.00	21
100,000	250,000	15,525.00	22½
250,000	500,000	49,275.00	24
500,000	750,000	109,275.00	26¼
750,000	1,000,000	174,900.00	27¾
1,000,000	1,250,000	244,275.00	29¼
1,250,000	1,500,000	317,400.00	31½
1,500,000	2,000,000	396,150.00	33¾
2,000,000	2,500,000	564,900.00	36¾
2,500,000	3,000,000	748,650.00	39¾
3,000,000	3,500,000	947,400.00	42
3,500,000	4,000,000	1,157,400.00	44¼
4,000,000	5,000,000	1,378,650.00	47¼
5,000,000	6,000,000	1,851,150.00	50¼
6,000,000	7,000,000	2,353,650.00	52½
7,000,000	8,000,000	2,878,650.00	54¾
8,000,000	10,000,000	3,426,150.00	57
10,000,000	4,566,150.00	57¾

A gift tax return (Form 708) and payment of the tax are due on March 15th following the close of the calendar year in which the taxable gifts are made.

Integration of Gift and Estate Taxes

The gift tax was originally intended to complement and reinforce the estate tax. The idea was to place a tax on the transfers of property made during a taxpayer's lifetime, thereby counterbalancing the lower estate taxes to be collected from the smaller estate which would be left at the taxpayer's death. The Treasury feels that the gift tax has failed to accomplish this

purpose, largely because gift and estate taxes are applied as separate taxes. This permits the making of well-timed transfers of property which can substantially avoid both gift and estate taxes. The Treasury is seriously considering the complete integration of gift and estate taxes into a single tax with each gift during life being considered as part of the taxpayer's estate.

Estate Tax

The estate is based on the net value of an individual's property which is transferred to others as a result of his death. The calculation of the actual estate tax due is somewhat complicated by the necessity of figuring two separate taxes.

The net tax payable is: (1) the estate tax, consisting of (a) the gross tax computed under Schedule I less (b) the credits allowable against such tax, plus (2) the additional estate tax, consisting of (a) the tentative tax computed under Schedule II less (b) the credits allowable against such tentative tax:

(1) *The estate tax* (1926 Act as amended—specific exemption of \$100,000 in determining net estate).

(a) Schedule I:

	Percent
First \$50,000 of net estate	1
<i>In excess of</i>	
\$50,000 up to \$100,000	2

(b) Credits:

(1) The amount of gift taxes paid under the Gift Tax Act of 1932 on gifts by the decedent which must be included in his gross estate, not in excess of the proportion of the gross tax computed under the above schedule which the value of the gift property bears to the value of the gross estate.

(2) The entire amount of gift taxes paid under the Revenue Act of 1924 on gifts by the decedent which must be included in his gross estate.

(3) The amount of succession taxes paid to any state or territory in respect to property included in the gross estate, not exceeding 80 percent of the tax computed under Schedule I before deducting credits Nos. 1 and 2.

(2) *The additional estate tax* (1932 Act as amended—specific exemption of \$60,000 in determining net estate).

(a) Schedule II:

		Tax on lower amount	Percent on excess
First \$5,000			3
	Net estate

(b) Credits:

(1) The gross tax under Schedule I.

(2) The amount of gift taxes paid under the Gift Tax Act of 1932 on gifts by the decedent which must be included in his gross estate, not credited against the estate tax under Schedule I and not in excess of the proportion of the tentative tax under Schedule II less the gross tax under Schedule I which the value of the gift property bears to the gross estate.

If the gross estate of decedent dying after October 21, 1942, exceeds \$60,000 (insurance included), the legal representative is required to file notice within 2 months after qualification and to file a return within 15 months after decedent's death. Tax is due within 15 months after decedent's death on Form 706. Tax is to be paid by the legal representative out of estate funds. Taxes unpaid after 15 months from the date of death draw interest at 6 percent per annum, except that where an extension of time for payment is granted after March 31, 1938, interest begins to run 18 months after the date of death at 4 percent.

Excise Taxes

Manufacturers' excise taxes based upon the amount of sales made by a manufacturer are levied at the following rates:

Automobile truck chassis and bodies	5%
Passenger automobile chassis and bodies, including motorcycles	7%
Parts and accessories	5%
Firearms, shells and cartridges	11%

(Net capital gain, $\frac{1}{2}$ of the above rates)

*For the past five years, legislative action has cut the actual tax load without changing the basic rates. The cuts were 25 percent in 1941, 1942, 1943 and 1944 calendar years and 1942, 1943, 1944 and 1945 fiscal years. For the 1945 calendar year and the fiscal year ending in 1946, the reduction was 50 percent. Any further reduction in the 1946 calendar year or fiscal year ending in 1947 requires further legislative action.

Social Security

The Social Security Act, enacted August 14, 1935 and considerably broadened by amendments in 1939, established ten separate programs. Two programs are insurance systems involving pay-roll taxes: a federal system of old-age and survivors' insurance, and a federal-state system of unemployment insurance. The other eight programs involve federal grants-in-aid to the states for the needy aged, the needy blind, dependent children, maternal and child-health services, crippled-children services, child-welfare services, vocational rehabilitation, and public-health services.

The administration of the Act is largely the responsibility of the Federal Security Administrator. Within the Federal Security Agency, the Social Security Administration, headed by Commissioner for Social Security Arthur J. Altmeyer, handles old-age and survivors' insurance, certain unemployment-insurance functions, and the programs for assistance to the needy aged, children, and blind. The Children's Bureau,

also part of the Federal Security Agency, administers the other children's services.

Until July 16, 1946, activities of the present Social Security Administration were carried out by the now-abolished Social Security Board, and the children's services were administered by the Children's Bureau as part of the Labor Department.

Old-Age and Survivors' Insurance

The old-age and survivors' insurance program began operating in 1937, although only old-age lump-sum benefits were paid before 1940. It is the only wholly federal program.

Benefits

Benefits available to workers who are "fully insured" under the system are:

1. A monthly retirement benefit for a worker 65 or over.
2. A supplemental monthly benefit for a retired worker's wife, if she is 65 or over, and for his children, if under 18.

3. Monthly benefits to the following survivors of a deceased worker, regardless of his age at his death:

- (a) Widow, if 65 or over.
- (b) Widow at any age if she has dependent children in her care.
- (c) Children, if unmarried and under 18.
- (d) Parents, if 65 or over and dependent on the deceased, but only if the worker dies leaving no widow or child entitled to benefits.

4. A lump-sum benefit, which is paid only if a worker dies leaving no widow, child, or parent entitled to monthly benefits at the time of the death. It is paid to the widow or widower, if he or she was living with the deceased at the time of death. If there is no such person, the persons paying the worker's burial expenses may be reimbursed for expenses paid. Lump-sum benefits can be paid under the above circumstances even if the worker was drawing old-age benefits before his death and his wife or child were also receiving benefits on his wages. Furthermore, the lump sum is not in place of monthly benefits payable later to survivors and does not affect their rights to monthly benefits.

Workers who are not "fully" insured but are merely "currently" insured are entitled only to those benefits for survivors listed under 3 (b), 3 (c), and 4 above.

A worker is "fully" insured if he has been paid \$50 in taxable employment in each of 40 quarters, or if he has worked in taxable employment half the time after 1936 (or after becoming 21, if later) and before he reaches 65 or dies.

A worker is "currently" insured if he has received wages of at least \$50 in taxable employment for at least 6 of the 12 calendar quarters immediately preceding his death.

The amount of the worker's primary benefits—that paid to the worker when he reaches 65—is determined as follows:

(1.) Figure the worker's "average monthly wage" by dividing his total taxable wages by the number of months elapsed since January 1, 1937. (Since time elapsed is a factor, a person who has worked continuously in covered employment will receive a larger benefit than one who has worked in exempt employment part of the time or has been unemployed.)

(2.) Take 40% of the first \$50 of the average monthly wage and add to it 10% of the remainder (not exceeding \$200, however). Then add to this sum 1% of the total for each year in which the worker received at least \$200 in covered employment. If the resulting sum is less than \$10, it is increased to \$10.

Example: A worker filing a claim in January 1946 was paid \$150 a month in covered employment for years 1937-40 and 1944-45. In years 1941-43 he worked on a

farm in exempt employment. (1) His wages for the years 1937-40 and 1944-45 total \$10,800. This is divided by the number of months since 1937: 108. His average monthly wage is \$100. (2) To find his benefit amount take \$20 (40% of the first \$50 of his monthly wage) and add to it \$5 (10% of the remaining \$50) and to this total (\$25) add \$1.50 (1% of \$25, multiplied by 6). The benefit amount is \$26.50 per month.

The amounts of other benefits are derived from the primary benefit as follows:

Wife: one-half of primary benefit.

Child: one-half of primary benefit.

Widow: three-quarters of primary benefit.

Parent: one-half of primary benefit.

Lump-sum benefit: 6 times the primary benefit. (If paid to persons paying burial expenses, the benefit is limited to expenses incurred.)

Maximum total of benefits which may be paid on any one worker's wages is the least of the following: \$85; 80% of the worker's average monthly wage; or twice the primary benefit. If benefits are already \$20 or less, they will not be further reduced.

A person earning \$15 or more in a month in covered employment is not eligible for a benefit for that month. Benefits to a wife or child are also canceled during any month in which the insured worker earns \$15.

Application for benefits is made to the nearest field office of the Social Security Administration.

Rates and Coverage

All employers covered by the federal insurance contributions law are required to pay a 1% tax on wages paid to employees, and each employee also pays a 1% tax on his pay. Tax rates are scheduled to rise to 2½% in 1948 and to 3% in 1949 and thereafter. Previously scheduled increases ranging from rates of 1½% to 2½% have been voted down by Congress for eight successive years, the rate remaining frozen at 1%.

Neither employer nor employee is required to pay tax on that part of a worker's pay which is over \$3,000 in any calendar year. If an employee does so because he worked for more than one employer, he may apply for a refund of excess tax at the end of the year.

The employee's tax is deducted by the employer and is paid over to the Internal Revenue Bureau at the end of each quarter together with the employer's tax. Although these taxes are initially paid into the Treasury, a corresponding amount is appropriated each year from the Treasury into the Old-Age and Survivors Insurance Trust Fund, from which benefits are paid.

250	56.00	84.00	42.00	70.00	28.00	336.00

An employer is liable for payment and deduction of tax as soon as he employs one employee. The length of employment and the number of employees is immaterial.

The following workers are exempt, and no tax is incurred on their wages: self-employed; agricultural labor; domestic service; casual labor not in the course of the employer's business; persons working for a son, daughter or spouse, or for a parent if the child is under 21; government employees (including United Nations, etc.); employees of nonprofit religious, charitable or educational organizations; railroad workers; certain employees of organizations exempt from income tax; student nurses and interns; workers on small fishing vessels; newsboys under 18.

A worker is either completely exempt or completely covered by the law, depending on which type of work occupies more than half of the pay period. If work is equally divided, all his work is covered.

Veterans of World War II, who would not otherwise have received wage credits

for their time in the service, were in 1946 voted special coverage in the event of death within 3 years after discharge. In such cases they are considered to have died fully insured, to have an average monthly wage of at least \$160, and to have had \$200 annual wages for each year of at least 30 days' active service.

Board Wage Records

Every employee must have a social security number. An account with the Social Security Administration is set up for each worker, and to this account are credited all wage payments reported. When a benefit claim is filed, these accounts are used to determine if the claimant is eligible for benefits and, if he is, the amount of the benefit to be paid.

By the end of 1945, 70% of the population over 13 years of age held social security numbers. Although more than 1.4 million persons 65 or over were entitled by their wage record to draw benefits, only 518,000 actually drew benefits in December, 1945.

TABLE NO. 2
Old Age and Survivors' Insurance:
Summary of Operations
 (in millions of dollars)

*Only lump-sum payments were made until 1940.

Unemployment Compensation

Federal and state governments cooperate in the administration of the unemployment insurance program. The federal law, beginning with 1936, imposed an excise tax on employment and established the framework for the federal-state system. All states (including District of Columbia, Hawaii and Alaska) followed suit, most of them in 1936 and 1937. Benefits became payable in most states in 1938 and 1939. (Wisconsin was the only state to pass such a law earlier—taxes were first collected in July, 1934.)

Benefits

The state laws determine who shall receive unemployment benefits, in what amount, and under what conditions. The provisions vary in each state, but generally a person is entitled to benefits for any week during which he is totally or partly unemployed, provided he has earned a sufficient amount of wages from an employer subject to the state law, has filed a claim for benefits, has served a "waiting period" of one week or so, and is not disqualified.

Disqualification means that the payment of benefits is postponed for a certain number of weeks, or is suspended entirely, because the worker is in one of the following situations:

1. Not able to work—ill, aged or disabled to the point that he cannot perform any marketable services.
2. Not available for work—not willing to do work for which he is fitted by experience, education or training, or places unreasonable restrictions on hours, wages, shift or skill he will accept, with the result that he is not likely to find the job he wants.
3. Quit work—left his job voluntarily without good cause. "Good cause" is some sound reason which would impel an ordinarily prudent person to quit, such as an unreasonable increase of hours without a

pay increase, a substantial reduction in wages, requirement of excessive unpaid overtime, a transfer to work which injures the person's health, an unreasonably heavy work quota, unjustified reprimands or abuse from superior, etc.

4. Discharged for misconduct—discharged because of conduct detrimental to his employer's interests—for example, refusal to obey orders, absence from work, tardiness, violation of employer's rules, intoxication at work, etc.

5. Refused job offer of suitable work without good cause—refused a job which is reasonably fitted to his training, experience, or skills, pays the prevailing wages for similar work, is not detrimental to his health or safety, has working conditions which are not substantially less favorable than those prevailing in similar work in the locality, and is within a reasonable distance from his home. If the job offer is suitable, the person is expected to accept it unless he has good cause for refusing, such as reasonably good prospects of employment elsewhere, unreasonable conditions required by employer, etc.

6. Involved in labor dispute. Even if the worker is not striking, he may be disqualified if he is a member of the union involved; or his wages, hours or working conditions will be affected by the outcome of the strike; or he serves on or refuses to cross picket lines; or engages in a sympathy strike. In almost all states benefits cannot be paid as long as the dispute persists. Only states where strikers can receive benefits are: Pennsylvania—after 4 weeks; New York—after 7 weeks; Rhode Island—after 8 weeks; Tennessee—after 1-4 weeks.

Some state laws also disqualify workers who leave because of marriage, marital duties, pregnancy, to attend school, or who receive dismissal pay, vacation pay, workmen's compensation payments, or veterans' readjustment allowances.

A worker seeking unemployment benefits must file a claim at the local office of the state unemployment bureau and register for work with the employment service. At that time, a benefit year (usually the year running from the date of his claim) and a base period (usually the year ending from 3 to 6 months before the filing of his claim) are established for him. His benefit amount will be a percentage of the wages earned in his base period, but no more than the maximum amount allowed. He is entitled to draw benefits for the set number of weeks during the rest of that benefit year. When he has exhausted these benefits he will not be eligible again until he can establish a new benefit year for which he has the necessary base period wages.

An employee moving out of the state does not lose benefit rights earned under that state law. He merely files a claim for

benefits at the local office in the state where he is now located and this office will act as agent for the other state in paying him benefits.

Tax

An employer is generally liable for a maximum total tax of 3% of his pay roll—0.3% to the federal government and 2.7%, or less, to the state. Although the federal government itself technically levies a pay-roll tax of 3%, in practice this usually amounts to only 0.3% because the employer is allowed a credit of as much as 2.7% for taxes paid to the states. The federal tax goes into general revenues, from which funds are appropriated each year to the states to cover administrative costs. Taxes collected by the states are used solely for benefit payments.

Under the federal law, which is merely a taxing statute, the Treasury Department collects the tax, which is paid annually. The state laws, under which benefits are paid, are administered by the various state unemployment insurance agencies.

Only four states require contributions from employees in addition to those from employers: Ala.—the rate varies from 0.1% to 1.0% depending on the rate of the employer; Cal.—1%; N. J.—1%; R. I.—the .5% unemployment tax has been suspended until June 30, 1948 and is being paid for sickness compensation instead.

Merit Rating

Almost all states collect unemployment taxes under "merit rating" systems. These systems allow tax rates lower than the usual standard rate of 2.7% to those employers who have some success in stabilizing employment, provided they have paid the tax for 3 or 4 years. In most states low rates go to employers who have fewest ex-employees drawing unemployment benefits; in New York, tax credits go to firms with little or no decrease in pay roll.

The average tax rate in merit rating states in 1945 was 1.5%. Over the years 1941-45, employers were saved approximately 2 billion dollars in taxes because of merit rating.

Coverage

Employers are liable for the federal tax if they have eight or more employees on some day of each of 20 weeks in a year.

State requirements for liability vary, ranging from eight employees in the state down to a single employee. An employer who has employees in several states may be subject to as many state laws.

Liability for both federal and state taxes is limited to the first \$3,000 of a worker's pay in a year.

Certain employees are exempt from tax under federal and most state laws and are not counted in determining whether an employer is subject to tax. These are self-

TABLE NO. 4

Total Unemployment Compensation Benefits

Source: Social Security Board.

Year	Total benefits (in thousands)	Average number of beneficiaries per week
1940.....	\$518,700.4	982,392
1941.....	344,320.7	621,065
1942.....	344,084.1	541,495
1943.....	79,643.1	115,454
1944.....	62,384.6	79,306
1945.....	445,864.8	462,261
1946 (first six months only)	688,526.9	1,456,531

employed, agricultural workers, domestic workers, members of a proprietor's immediate family, railroad workers, government employees, employees of nonprofit educational, charitable or religious organizations, insurance agents, newsboys under 18, student nurses and interns, and casual labor not in the course of an employer's business. Although maritime workers had previously been exempt under the federal law and in some states, the federal law was amended to include them as of July 1, 1946, and coverage is being similarly extended in a growing number of states.

Public Assistance

Under the Social Security Act, federal grants are made to the states for public assistance to needy persons, provided the state plan for distribution of the aid has been approved by the federal government. All states and territories cooperate in old-age assistance plans: all but Alaska cooperate in plans for the needy blind; all but Nevada share in plans for needy chil-

dren; all states and Puerto Rico have approved plans for maternal and child-health services, services for crippled children, and child-welfare services. Beginning January, 1947, grants for maternal and child-health services may be made to the Virgin Islands.

The federal contribution to the states, until October 1, 1946, was usually one-half of the assistance payment, up to the maximum fixed by federal law. Since that date, federal contributions for assistance to needy aged and the blind are: \$10 of the first \$15 and 50% of any amount between \$15 and \$45. Federal contributions for dependent children are: \$6 of the first \$9 and 50% of the balance. The maximum payment to which the federal government will contribute for needy children is \$24 for the first child and \$15 for each additional child. Only those children are eligible who are under 16 (or under 18 and still at school) and who have been deprived of parental support or care and are living with a member of the family.

Under the \$40 maximum for old-age assistance in effect before October 1, 1946, the average payment varied considerably from state to state, ranging from \$10 to \$40.

Social Security for Railroad Workers

Social security for most workers in the railroad transportation industry is provided under a national system apart from that established by the Social Security Act. The Railroad Retirement Act was first passed in 1934, but was held unconstitutional by the Supreme Court. The present Act was passed in 1935 and was substantially amended in 1937 and again

¹Preliminary.

in 1946. It is administered by the Railroad Retirement Board.

Taxes supporting the system are collected under the Carriers Taxing Act by the Bureau of Internal Revenue. Taxes are levied on both employers and employees at these rates: 1937-39: 2¼%; 1940-42: 3%; 1943-45: 3¼%; 1946: 3½%; 1947-48: 5¾%; 1949-51: 6%; 1952 on: 6¼%.

Benefits provided are: retirement benefits at 65 or over, and, under certain circumstances, 60; survivors' benefits; disability benefits.

Under the Railroad Insurance Act, also administered by the Railroad Retirement Board, railroad workers receive unemployment insurance, and after July 1, 1947, sickness compensation and maternity benefits. Costs are paid by employers at a rate of 3% of pay roll up to \$300 a month per worker. Taxes are collected by the Board.

Federal Civil Service

The civil-service retirement system, first established in 1920, now provides a retirement system for almost all federal employees not under another plan. It provides for a retirement benefit at 70, or at 55 or 60 with 30 years' service, or at 62 with 15 years' service; a disability retirement benefit; a deferred annuity for separated employees with 5 years' or more service when they reach the age of 55 or 62; refunds if service is less than 5 years; death benefit to a wife or dependent child in the amount of the worker's credit in the fund.

Veterans' Benefits

Mustering-out pay

Veterans—except, in general, those ranking higher than Army captain or Navy lieutenant honorably let out after Pearl Harbor—get mustering-out pay as follows:

- \$100 for those who served less than 60 days.
- \$200 for those who served 60 days or more in continental United States.
- \$300 for those who served 60 days or more outside continental United States or in Alaska.

If a discharged veteran dies before receiving payment, distribution of mustering-out pay is limited to spouse, children, or parents, in that order.

Job reinstatement

The Selective Service Act of 1940 grants to all honorably discharged veterans:

1. Their old job back, or one of like seniority, status and pay.
2. Guarantee against discharge except for cause for one year after reinstatement. During that time the veteran cannot be demoted nor can his job benefits be reduced.

Employees contribute 5% of their pay, and this contribution is matched by the government.

Health Insurance

With the exception of state laws for sickness compensation in Rhode Island and California, health insurance is on a voluntary basis. An increasing number of companies have set up plans for their employees, either on their own or by signing up with an insurance company or nonprofit organization. Many unions have plans for their members, as do other private groups.

Popular forms of insurance are hospitalization costs, medical and surgical care, and pay for time lost through sickness.

The largest of the nonprofit plans is the Blue Cross, whose 85 hospital-service plans have over 21,000,000 subscribers throughout the country.

During 1946, the Senate Labor and Education Committee held hearings on Senator Wagner's National Health Insurance Bill. This proposal would set up a national system of insurance, covering virtually all workers. Benefits would cover: general medical services and services of specialists at a doctor's office, at home and in the hospital; general and special dental services; home nursing; laboratory expenses; certain hospitalization costs. The program would be financed by 3% of earnings up to \$3,600 a year.

Qualifications on job rights

The veteran must be reapplying for a job that was not temporary at the time he left it; the employer need not reinstate him if the employer's circumstances have so changed as to make rehiring impossible or unreasonable; the veteran must apply for his old job within 90 days of discharge; he need not be rehired if he is no longer qualified to perform his job. He can be laid off if work slackens.

How the veteran can enforce his rights

By suit in the U. S. District Court with the assistance of the U. S. Attorney.

National Guard, reserve officers, and retired personnel have Selective Service rights. Benefits are not limited to draftees—anyone, including WACS, WAVES, SPARS, and Marines (female), who entered active service after May 1, 1940, is covered.

Vocational rehabilitation

Vocational rehabilitation courses not exceeding 4 years and placement in suitable, gainful employment are available for any

veteran who served on or after September 16, 1940, and was honorably discharged with a service-connected disability which can be overcome by training.

The Veterans Administration arranges for the training, pays for tuition and books and the veteran receives, in addition, training allowance added to his disability pension to achieve the following minimums:

- \$105 per month, if without a dependent
- \$115 per month, if with a dependent, *plus*
- (a) \$10 for one child and \$7 for each additional child, and
- (b) \$15 for a dependent parent.

If the veteran's disability pension exceeds the above minimum he gets the larger amount. Once employed, his basic pension award will in no way be reduced because he has succeeded in overcoming his handicap.

Disability Pensions

Veterans having a 10 percent or more disability resulting from disease or injury incurred in or aggravated by war service are eligible to receive a pension if their separation from the service was not under dishonorable conditions. Pension rates vary from \$13.80 to \$138 per month, depending on the extent of disability. Pension payments are "untouchable" in legal proceedings and may not be assigned. Pension awards are within the jurisdiction of the Veterans Administration. A veteran's widow and surviving children are also eligible to receive pension benefits.

Veterans preference

Veterans who have been separated from the service under honorable conditions must be given preference in certification for appointment, in appointment, in reinstatement, in re-employment and in retention in federal civil service positions. Specifically with respect to the positions of crier or bailiff in federal courts, the Court Crier or Bailiff Preference Act grants preference in appointment to veterans.

National Service Life Insurance

Persons in service and veterans who never owned any GI insurance, but who were in service between October 8, 1940 and September 2, 1945, are entitled to take out insurance in any amount between \$1,000 and \$10,000 in multiples of \$500. The insurance is on a five-year level premium term plan, and in the first instance is granted against the death of the insured while in service. It is convertible to ordinary life, 20- or 30-payment life, 20-year endowment or endowment at the age of 60 or 65, on any premium date after one year within the five-year term.

Veterans have the right to convert the insurance without medical examination, except (a) where necessary to determine

whether the insured is totally disabled and (b) upon complete surrender of the policy while it is still in force. Reconversion may also be made to higher premium rate, or, upon proof of good health to a lower premium rate.

Beneficiaries are restricted to widow, widower, child, stepchild, or illegitimate child (if the latter two are specifically designated as beneficiaries), parent, brother or sister for any insurance which matured before August 1, 1946. For insurance maturing on or after that date beneficiaries may be any person or persons, firm, corporation or any other legal entity individually or as trustee. Where no beneficiary has been designated, or where the beneficiary has died, payments are made to widow or widower, child or children (including adopted children), parents or brothers and sisters of the insured. For insurance maturing before August 1, 1946, payments are made to beneficiaries in equal monthly installments for 120 months if the beneficiary is over 30 years at the time the policy matures. If the beneficiary is under 30 years at policy maturity, the insurance is payable in 240 monthly installments. Instead of either of these types of payment, however, the insured or the first beneficiary may elect settlement as a refund life income. For insurance maturing after August 1, 1946, payment is made to the beneficiary in 36 monthly installments unless one of these options is elected instead: payment in one lump sum; payment in specified number (no less than 36) of monthly installments; payment in installments throughout life; refund life income. If the insured becomes disabled while in service the government assumes payment of the premiums for him.

Servicemen's Readjustment Act of 1944

The "GI Bill of Rights" applies to veterans who served on or after September 16, 1940. It provides for hospitalization, education, loans, employment, and readjustment allowances.

Hospitalization

Veterans are guaranteed against disability discharge without explanation of their rights to apply for benefits and the opportunity to file a claim; right to fitting and training in the use of prosthetic appliances is guaranteed; veterans are protected against being required to sign any kind of statement as to the origin, incurrence or aggravation of any disease or injury—such statements are *null and void*.

Education

A veteran who has served 90 days or more since September 16, 1940 and before the termination of the war may avail himself of educational opportunities at government expense. He must start the course not later

than 4 years after separation or termination of the war, whichever is later.

A veteran who qualifies is entitled to 12 months of education or its equivalent in part-time study plus additional time up to three years (a total of 4 years) in direct proportion to the time he spent in service. Therefore, a veteran with 32 months of service is entitled to 44 months of education or training.

The Veterans Administration will pay tuition and school fees up to a total of \$500 for each school year in attendance at an approved institution. No board, lodging, or other living or travel expenses are paid, but while at school the veteran is entitled to \$65 per month living allowance, and \$90 if he has dependents. Allowance will not be paid if the veteran is earning \$175 (if single) or \$200 (if he has dependents) in full- or part-time employment while he is attending school. Where the amount of his earnings is less than those ceilings, subsistence allowance payments will be made to bring the total up to the ceilings.

The veteran may elect any course of study if the school will accept him, and he must maintain satisfactory standing.

A veteran may also elect to take apprentice or on-the-job training in an industrial establishment. His earnings in training plus the government allowance cannot exceed \$175 a month if single, \$200 if he has dependents.

Loans to Veterans

Three types are available: 1. For purchase or construction of homes; 2. for purchase of farms and farm equipment; 3. for purchase of business and business property.

In all three types, eligibility requirements are that the veteran be honorably separated on or after September 16, 1940 and before the termination of the war; service of at least 90 days or a service-connected disability as reason for the discharge or release; application must be made within ten years after the end of the war.

The government will guarantee 50 percent of the loan—up to a maximum guaranty of \$2,000 on non-real-estate loans, and \$4,000 on real-estate loans, or prorated portions on loans of both types or in combination. Maximum interest rate is 4 percent. Terms of loans: (a) on farm realty—40 years; (b) other real estate—25 years; (c) non-real estate—10 years. (Under certain circumstances second loan guarantees may be undertaken with the approval of the Administrator.)

Home Loans

Proceeds must be used for purchase of property, construction or improvement costs—the property to be occupied by the veteran as his home. Mortgage amortization

terms must be in proper proportion to the veteran's present and expected income and expenses. Proposed price must not exceed reasonable value as determined by an appraiser designated by the Administrator.

Business loans

Business loans will be approved when they are to be used (a) for engaging in business or pursuing a gainful occupation; (b) for purchasing land, buildings, supplies, equipment, machinery, etc., for business; (c) for constructing or repairing real or personal property to be used in business; (d) for working capital.

There must be reasonable likelihood of success, as indicated by the veteran's ability and experience and the conditions under which he intends to conduct the business. Purchase price must be reasonable—as determined by an appraiser appointed by the Administrator.

Farm Loans

Farm loans will be made to a veteran for purchase or repair of lands, machinery, equipment, livestock, etc., for farming.

The ability and experience tests are similar to those applying to business loans. Appraisal for reasonable value is also required. Veteran must have reasonable prospect of success in farming.

Readjustment Allowance

This section of the GI Bill provides for payment of \$20 a week for a maximum of 52 weeks to unemployed veterans residing in the United States. It also provides for the payment to a partially-employed veteran whose weekly wages are less than \$23 of the sum of \$20 less the amount of his wages in excess of \$3. The veteran must be able to work, registered with a public employment office and must not be receiving an allowance through any other provision of the Act. A self-employed veteran earning less than \$100 per month is eligible for an allowance representing the difference between his net earnings and \$100. Allowances are available to an eligible veteran no later than 2 years after his discharge or two years after termination of the war, whichever is later.

STRATEGICAL SUMMARY OF WORLD WAR II

by

MAJOR GEORGE FIELDING ELIOT

Commentator on Military Affairs and

Special Writer for

THE NEW YORK HERALD TRIBUNE

SELECTIVE SERVICE

by

MAJOR-GENERAL LEWIS B. HERSHEY

EUROPE, 1920: 

and at the height of
German conquest, 1942 : 

DECLARATIONS OF WAR

Address of the President of the United States before a joint session of the two Houses of Congress requesting that Congress declare that there exists a state of war between the United States and the Japanese Empire.

To the Congress of the United States:

Yesterday, December 7, 1941—a date which will live in infamy—the United States of America was suddenly and deliberately attacked by naval and air forces of the Empire of Japan.

The United States was at peace with that Nation and, at the solicitation of Japan, was still in conversation with its Government and its Emperor looking toward the maintenance of peace in the Pacific. Indeed, one hour after Japanese air squadrons had commenced bombing in Oahu, the Japanese Ambassador to the United States and his colleague delivered to the Secretary of State a formal reply to a recent American message. While this reply stated that it seemed useless to continue the existing diplomatic negotiations, it contained no threat or hint of war or armed attack.

It will be recorded that the distance of Hawaii from Japan makes it obvious that the attack was deliberately planned many days or even weeks ago. During the intervening time the Japanese Government has deliberately sought to deceive the United States by false statements and expressions of hope for continued peace.

The attack yesterday on the Hawaiian Islands has caused severe damage to American naval and military forces. Very many American lives have been lost. In addition, American ships have been reported torpedoed on the high seas between San Francisco and Honolulu.

Yesterday the Japanese Government also launched an attack against Malaya.

Last night the Japanese forces attacked Hong Kong.

Last night Japanese forces attacked Guam.

Last night Japanese forces attacked the Philippine Islands.

Last night the Japanese attacked Wake Island.

This morning the Japanese attacked Midway Island.

Japan has, therefore, undertaken a surprise offensive extending throughout the Pacific area. The facts of yesterday speak for themselves. The people of the United States have already formed their opinions and well understand the implications to the very life and safety of our Nation.

As Commander in Chief of the Army and Navy I have directed that all measures be taken for our defense.

Always will we remember the character of the onslaught against us.

No matter how long it may take us to overcome these premeditated invasions, the American people in their righteousness might win through to absolute victory.

I believe I interpret the will of the Congress and of the people when I assert that we will not only defend ourselves to the uttermost but will make very certain that this form of treachery shall never endanger us again.

Hostilities exist. There is no blinking at the fact that our people, our territory, and our interests are in grave danger.

With confidence in our armed forces—with the unbounded determination of our people—we will gain the inevitable triumph—so help us God.

I ask that the Congress declare that since the unprovoked and dastardly attack by Japan on Sunday, December 7, a state of war has existed between the United States and the Japanese Empire.

FRANKLIN D. ROOSEVELT

THE WHITE HOUSE

December 8, 1941.

Public Law 328—77th Congress Joint Resolution

Declaring that a state of war exists between the Imperial Government of Japan and the Government and the people of the United States and making provisions to prosecute the same.

Whereas the Imperial Government of Japan has committed unprovoked acts of war against the Government and the people of the United States of America: Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the state of war between the United States and the Imperial Government of Japan which has thus been thrust upon the United States is hereby formally declared;

and the President is hereby authorized and directed to employ the entire naval and military forces of the United States and the resources of the Government to carry on war against the Imperial Government of Japan; and, to bring the conflict to a successful termination, all of the resources of the country are hereby pledged by the Congress of the United States.

Approved, December 8, 1941, 4:10 P.M., E. S. T.

Declarations of War—(cont.)

Message from the President of the United States transmitting a request that the Congress recognize a state of war between the United States and Germany, and between the United States and Italy.

To the Congress of the United States:

On the morning of December eleventh, the Government of Germany, pursuing its course of world conquest, declared war against the United States.

The long known and the long expected has thus taken place. The forces endeavoring to enslave the entire world now are moving towards this hemisphere.

Never before has there been a greater challenge to life, liberty, and civilization.

Delay invites greater danger. Rapid and united effort by all of the peoples of the

world who are determined to remain free will ensure a world victory of the forces of justice and of righteousness over the forces of savagery and of barbarism.

Italy also has declared war against the United States.

I therefore request the Congress to recognize a state of war between the United States and Germany, and between the United States and Italy.

FRANKLIN D. ROOSEVELT

THE WHITE HOUSE
December 11, 1941.

Public Law 331—77th Congress Joint Resolution

Declaring that a state of war exists between the Government of Germany and the Government and the people of the United States and making provision to prosecute the same.

Whereas the Government of Germany has formally declared war against the Government and the people of the United States of America: Therefore be it

Resolved by the Senate and the House of Representatives of the United States of America in Congress assembled, That the state of war between the United States and the Government of Germany which has thus been thrust upon the United States is hereby formally declared; and the President is hereby authorized and directed to employ the entire naval and military forces

of the United States and the resources of the Government to carry on war against the Government of Germany; and, to bring the conflict to a successful termination, all of the resources of the country are hereby pledged by the Congress of the United States.

Approved, December 11, 1941, 3:05 P.M.,
E. S. T.

In similar wording, war was declared against the Government of Italy by Joint Resolution, Public Law 332, approved December 11, 1941, 3:06 P.M.

Declarations of War, Invasions and Surrenders of World War II

1939 Sept. 1, Germany invades Poland.
Sept. 3, Great Britain and France declare war on Germany.
Nov. 30, Russia invades Finland.

1940 April 9, Germany invades Denmark and Norway.
May 10, Germany invades Holland, Belgium and Luxembourg.
May 16, Germany invades France.
June 10, Italy declares war on France and Great Britain.
Oct. 7, Germany invades Rumania.
Oct. 28, Italy invades Greece.

1941 April 6, Germany invades Yugoslavia and Greece.
June 22, Germany declares war on Russia.
Dec. 7, Japan bombs Pearl Harbor, declares war on U. S. and Gt. Brit.
Dec. 8, United States and Great Britain declare war against Japan.
Dec. 8, China declares war on Japan, Germany, and Italy.
Dec. 11, Germany and Italy declare war on the United States.

Dec. 11, United States declares war against Germany and Italy.

1942 May 22, Mexico declares war on Japan, Germany and Italy.
Aug. 22, Brazil declares war on Germany and Italy.

1943 April 7, Bolivia declares war against the Axis Powers.
Sept. 3, Allies invade Italy.
Sept. 8, Italy surrenders to the Allies.
Oct. 13, Italy (Badoglio government) declares war against Germany.

1944 June 6, D-Day—Allies invade the Channel Coast.

Sept. 13, Rumania signs armistice.
1945 Feb. 23, Turkey and Egypt declare war against Axis.
March 27, Argentina declares war on Germany.

May 2, German army in Italy surrenders to Allies.

May 8, Germany surrenders unconditionally to the Allies.

Aug. 8, Russia declares war on Japan.

Sept. 2, Japan surrenders.

Strategical Summary of World War II

By George Fielding Eliot

A. THE OBJECTIVES AND STRATEGY OF THE GERMAN HIGH COMMAND

The objective of Adolf Hitler was the complete domination of Europe, the Middle East and North Africa as the first stage on the road to German world-empire. Domination meant complete elimination of all military and political opposition, and reduction of non-German peoples to serfdom.

The basic preparation was accomplished without war. Germany was re-armed, Austria swallowed, Czechoslovakia conquered. Germany thus acquired a consolidated central position in Europe and control of major lines of operation to the east, west and south. Hitler realized that further steps were likely to result in war with Britain, France, eventually with the Soviet Union, and perhaps the United States. His plan was to dispose of Germany's European opponents singly, in succession, and thus leave the United States isolated and more or less helpless.

The steps envisaged by the German High Command were:

(1) The conquest of Poland. This was likely to bring about war with Great Britain and France. They were not prepared. Poland *could* be beaten alone—if Russia would hold off. Accordingly, the Germans made a temporary political agreement to divide Poland between Germany and Russia.

(2) The conquest of Denmark and Norway. This was an essential preliminary to invading France. It secured the exposed northern flank of Germany against air and amphibious attacks from Britain based on Scandinavia. It brought German warships and planes to the open Atlantic to attack Britain's sea life lines.

(3) The destruction of France by blitzkrieg methods, tested in Poland. The German High Command thought the British would recognize their situation as hopeless and make peace, leaving Germany free for the fourth step.

(4) The conquest of the Soviet Union. Germany then would be master of all the resources of Europe and would be able to deal with the Middle East and North Africa at leisure. The United States would be helpless to interfere.

The war began, September 1, 1939, and Hitler's first step went off with clockwork precision. Poland was quickly crushed. The Germans were left undisturbed by Britain and France during the winter of 1939-1940.

There followed the equally perfect execution of the second step—Denmark and Norway. The Danes had no power to resist. The Norwegians fought as best they could.

British efforts to aid them proved futile. The Luftwaffe ruled the air.

The third step in the German program also was successful. The French army, supported by a small British expeditionary force, was unable to deal with the highly mobile, mechanized German ground-air attack. The French had little armor, their few anti-tank guns were ineffective, their small air force was overwhelmed. The troops fought well, but their leadership failed them. The French General Staff had not understood the nature of the next war. France, completely overpowered, surrendered June 22, 1940.

But—the British did not sue for peace, as expected. They said, in the words of a recruiting poster of the day: "Very well, then. Alone." The British expeditionary force, evacuated with great skill and determination from Dunkerque, had lost heavily in men and had left behind all its guns and heavy equipment. There was only one good division in the British Isles, not more than 50 tanks and 200 field guns of all kinds. The Royal Air Force was weak. Had the Germans immediately set on foot an invasion of Great Britain, it would have been virtually certain of success. Britain would have been overwhelmed, and the only advanced base from which American power could have been brought to bear against European Germany would have been eliminated.

The Germans made the fatal decision to try for air superiority over the R.A.F. first. The result was the aerial Battle of Britain—and a smashing defeat for the Luftwaffe. It was the first major defeat that Hitler had ever sustained. The Germans might have won had they persisted. The British were sending planes into each day's fighting fresh from the factories; only the skill, determination, and endurance of the pilots provided the margin of victory. The German air staff, appalled by their losses, recommended that the attempt be discontinued. The Battle of Britain was won by British courage. It was lost by German faintheartedness. And with it was lost Hitler's best chance of ultimate victory.

For it was now too late to think of invading the British Isles. The American government, shocked into action by the collapse of France, was rushing supplies across the Atlantic to Britain. The reserve weapons of the American Army—600,000 rifles, 20,000 machine guns, 3,000 pieces of artillery—were sent to arm the British Home Guard and the newly raised divisions until the British could make weapons. Adolf Hitler, like Napoleon Bonaparte more than one hundred years before, turned away from the shores of the Eng-

lish Channel to seek empty victories in Eastern Europe.

Meanwhile he tried to starve out the British Isles by choking off, with planes and submarines, the flow of food and supplies moving across the seas from America and other countries. This was the Battle of the Atlantic. For a while the Germans came uncomfortably close to winning it. An appalling number of ships was sunk. Both England and the United States kept building new ships frantically. The British hunted down Nazi submarines with dogged persistence. American measures to protect shipping in the Atlantic took on almost the character of an undeclared naval war, while we were still neutral.

Meanwhile, a new dislocation of the German program occurred. No doubt Hitler had planned ultimately a conquest of the Balkans, North Africa and the Middle East; but this phase probably was scheduled for later, after the defeat of Russia. Instead, the Germans had to make a time-consuming side excursion into the Balkans and North Africa—before tackling Russia.

This was brought on by Hitler's preposterous ally, Italy. Mussolini had invaded Greece and had become bogged down. His army in North Africa was getting beaten by the British. Hitler had to go to his rescue, lest the Allies win the Mediterranean.

So Hitler marched South. Hungary, Rumania and Bulgaria he acquired by the mere terror of his name, plus political jugglery. The Yugoslavs resisted; he overwhelmed their armies and attacked the Greeks. The British were compelled to quit chasing the Italians in North Africa in order to throw a pitifully small expeditionary force into Greece. The Germans drove it into the sea. German power was thus firmly established in the Balkans, the eastern Mediterranean and in North Africa. But these victories were gained at a price which Hitler could not afford to pay: a price in time. Russia had been preparing, England recovering, in that spring of 1941.

The fourth and greatest of his four steps to the domination of Europe lay before Hitler: the destruction of the Red army. And upon that step there was a time limit—the approaching winter. If by the end of the year the Russian power remained unbroken, Hitler would face in the spring of 1942 the one eventuality he dreaded most, and which he had planned so carefully to avoid—a war on two fronts, with a major opponent to the east and another to the west. The one German hope now was to destroy Russia before the winter set in, then turn in full strength upon Britain.

Truly every day lost in commencing the planned assault on Russia was a day which might never be regained. The resistance of the Yugoslavs, the Greeks, and the little British expeditionary force seemed futile

enough at the time. But due to this Balkan diversion, Hitler began his great assault on Russia not in April, but late in June of 1941.

At first the Germans made swift progress. The Russian armies retreated steadily. The Germans swept across the Baltic States, White Russia, the Ukraine. On the north, they came to the gates of Leningrad and were checked. On the south they entered Rostov, and besieged Sevastopol. But their great weight was in the center, their goal, Moscow.

As his armies moved nearer the Russian capital, Hitler proclaimed Russia's utter defeat. "The Russian power," he said, "has fallen in the dirt, never to rise again."

But winter descended on the land. The German armies were not equipped for the Russian winter and they suffered cruelly. The Luftwaffe was grounded. The Russians fought on, for they understood winter warfare. Moscow did not yield to the Nazi invader.

The German High Command decided to wait out the winter in front of Moscow. Hitler's strides toward world domination had gone well at first, but they began to falter. Time began to work against him.

And then on December 7, 1941, the Japanese attacked the United States Pacific Fleet at Pearl Harbor. Within twenty-four hours, the United States was at war not only with Japan but also with Germany.

B. THE OBJECTIVES AND STRATEGY OF THE JAPANESE HIGH COMMAND

The military clique ruling Japan had long schemed to conquer the basic raw materials of modern industry which Japan lacked—oil, iron, coal, rubber and tin. They intended to acquire the Dutch East Indies and Malaya. Likewise they intended to push Russia back west of Lake Baikal, and to bring China under Japanese control. China would furnish a ready-made market for Japanese manufactured goods.

One school of Japanese military thought held that the continental part of the program should be carried through first, beginning with the conquest of China. This group was spearheaded by the Kwangtung army—the Japanese army of occupation in Manchuria. The other school, chiefly composed of naval officers, held that the first thing to be done was to seize the Dutch East Indies and Malaya, at the same time taking over the Philippine Islands. These officers knew this would mean war with the United States and Great Britain but they felt this was the major effort, and that if it were successful, an isolated China would fall easy prey.

The Kwangtung army group won, at first. After the conquest of Manchuria in 1931, the Japanese proceeded to the conquest of China as a whole. The result,

however, was much as the naval officers had foreseen. After five years of fighting, the Japanese in 1941 held the Chinese railways, the lower course of the Yangtze River, sea-ports and major inland cities, but very little else. The Chinese still had organized troops in the field, and guerrilla bands who gave the Japanese no rest. Japan, whose normal revenues were sufficient to provide for a standing army of only 225,000 men, was being compelled to maintain more than 1,000,000 men under arms. The average Japanese at home was getting very sick of pulling in his belt a little tighter each year. The attitude of the United States was becoming more and more menacing. From supplying iron, oil and other exports, the United States turned by 1941 to a virtual embargo on all shipments to Japan. Under these conditions the Japanese effort in China would slowly grind to a halt unless other sources of supply could be obtained.

The European war seemed a godsend. Britain was desperate; France and Holland were out of the picture; Russia was supposed to be collapsing. The United States was becoming more and more involved in the Battle of the Atlantic. Surely such a chance would not be likely to recur. If Germany were victorious in Europe it would not be long before Germany would appear in the Far East demanding a share of the rich spoils of that region. The Japanese wanted to be well established in their new empire by that time.

The first phase of the Japanese war plan called for seizing Malaya, Singapore, the Dutch East Indies and the Philippines. They calculated, rightly, that this would be accomplished fairly readily—provided they first knocked out the United States Pacific Fleet. That was the reason for the sneak attack on Pearl Harbor.

The second phase of the Japanese war plan was to prevent recovery and offensive return by the enemy, particularly the United States.

This phase seems to have included some or all of the following: (1) a possible invasion of Australia, or at least the complete isolation of that island-continent; (2) invasion of the Hawaiian Islands via Midway, with a concurrent attack on the Aleutian Islands to form a northern flank; (3) attack on the American coast, raiding our aviation industries; (4) stimulation of unrest and eventual revolution in India.

The major purpose of the second phase was to deprive the United States of any base from which an offensive against Japan could be set on foot. Like the German plan, the Japanese plan was based on initial superiority in fighting power in a particular region; and like the Germans, the Japanese counted on being able to conquer additional resources which would put them more nearly on a level with ene-

mies of greater potential strength than their own. But they would need time to organize and digest those resources, and to intrench themselves both militarily and economically in their new empire. The second phase of their plan was intended to gain time. When at last we were ready to attack them, they expected to be so strongly intrenched that we would count it not worth the cost to attack them across the vast reaches of the Pacific.

It will be noted, however, that—also like the German plan—the Japanese plan had a time limit. The longer it was denied complete success, the less chance it had of success. This applies especially to the matter of bases. Failure to knock out the Russian armies by the winter of 1941 spelled failure to the Germans. Failure to eliminate the American-Australian bases in the Pacific in 1942 spelled failure to the Japanese.

C. THE MILITARY SITUATION ON DECEMBER 7, 1941

In that December of 1941, the United States, being confronted with two major enemies at once, had to make highly fateful strategic decisions.

America could not hope to launch a major offensive on either side of the world for at least a year. Far from helping us, our European Allies, Britain and Russia, had their backs to the wall and needed help from us. We could not afford to let either one be knocked out by Germany.

On the other hand, Japan could be expected to gain strength as she advanced if she were permitted to digest the resources of the Asiatic lands she conquered. A full-scale Japanese attack on the Hawaiian Islands was a definite possibility. Both Australia and India were exposed and almost defenseless. So was Alaska. The Panama Canal and the west coast of the United States could not be considered as out of Japan's eventual reach.

The great decision was taken: the United States would launch its first major offensive, when the time was ripe, against Germany.

The reasons for choosing Germany first, and leaving Japan until later, were compelling. Germany was nearer; Germany was already engaged by powerful forces (the Russian Armies) which could not be shifted elsewhere. We had an accessible base—the British Isles—close to the heart of Germany, while we still had to win such a base against Japan. And Germany was still capable of inflicting defeat on one of our major Allies—Russia—while Japan was hardly capable of doing more to China than she had already done, and could probably be contained so that she could not reach any of the others provided Australia and India and Hawaii could be held.

There was a risk, of course. There are risks in all military decisions. The implementation of this decision called for judgment—enough force to be sent to the Pacific to contain Japan, but not too much lest it detract from the major effort in Europe. The risks were taken, and the decision proved justified.

Having made that major decision, the United States mapped out its initial objectives as follows:

(1) To keep open the lines of sea communication with Great Britain and Australia, and to open and keep open as far as possible lines of communication with Russia and China, in order that American supplies might reach our various Allies.

(2) To maintain the central position in the Middle East in order to prevent a junction of our two major enemies. The Germans were threatening the Middle East, both through Egypt and through southern Russia. If they broke through, they might join hands with the Japanese. Then Germany could draw upon the raw materials of all southern Asia; and could provide Japan with the technical assistance she so badly needed.

(3) To build up our naval and air power in the Pacific as rapidly as possible in order to prevent a Japanese invasion of Australia and to check or contain other Japanese offensive operations—perhaps against the Aleutians, Hawaii or Ceylon. If we saved these positions, an offensive return against Japan would eventually become possible.

(4) To build up in the continental United States a powerful air force and a powerful ground striking force with which to take the offensive on a major scale at the earliest possible date. The offensive power of the United States, once it was ready, was to form the final reserve of freedom, the decisive element which would bring us victory. It was of vital importance that this force should not be wasted away in dribblets. From this consideration arose much of the subsequent clamor on two heads—the so-called second front uproar, and the cry that we were letting the Pacific war go by default. To the infinite credit of those who had in hand the leadership of the Allied military effort, that clamor was resisted.

(5) To bring under a single command the mobile offensive power of the United States and the nations of the British Commonwealth, so that the resources of all might be employed in accordance with a unified plan and under unified direction. This consideration led to the creation of the Combined Chiefs of Staff, which turned out to be the most effective agency for the conduct of war which the wit of man has ever devised.

D. THE PRINCIPLE OF UNITY OF COMMAND

The Combined Chiefs of Staff consisted of two parts—the American Joint Chiefs of Staff and the British Chiefs of Staff. The one sat usually in Washington, the other in London. Each consisted of the chiefs of staff of the army and navy, plus for Britain the chief of the air staff and for the United States the commanding general of the Army Air Forces; in addition, each included the personal chief of staff of the head of the government.

The headquarters and working offices of the Combined Chiefs of Staff, as such, were in Washington, where the British Chiefs of Staff were represented by a senior officer acting as the representative of Prime Minister Churchill assisted by a general, an admiral and an air marshal, together with several hundred subordinate British officers of all three services.

The American members of the Combined Chiefs of Staff throughout the war were General of the Army George C. Marshall, Chief of Staff of the Army; Fleet Admiral Ernest J. King, Chief of Naval Operations; General of the Army Henry H. Arnold, Commanding General, Army Air Forces; and Fleet Admiral William D. Leahy, Chief of Staff to the President.

The British members were Field Marshal Sir Alan Brooke (now Lord Alanbrooke), Chief of the Imperial General Staff; Admiral of the Fleet Sir Dudley Pound, First Sea Lord and Chief of the Naval Staff, who was later succeeded by Admiral of the Fleet Sir Andrew Browne Cunningham (now Lord Cunningham); Marshal of the Royal Air Force Sir Charles Portal (now Lord Portal), Chief of the Air Staff; and General Sir Hastings Ismay, Chief of Staff to the Prime Minister.

The senior British representative with the Combined Chiefs of Staff in Washington, was, during most of the war, Field Marshal Sir John Dill; after his death in November, 1944, he was succeeded by Field Marshal Sir Henry Maitland Wilson (now Lord Wilson).

This was the agency to which was committed the higher direction of the war for both countries. The Combined Chiefs of Staff were responsible jointly to the President and the Prime Minister, who were their only superiors. The principle of combined command was carried out in every theater of war where American or British forces operated. In each theater a Commander in Chief was appointed who had under his command all the Allied forces in the theater, land, sea and air. Each Commander in Chief was directly responsible to the Combined Chiefs of Staff, and to them alone.

The first of these combined commands to be created was that in the Southwest Pacific, to which General Douglas Mac-

Arthur was appointed. Other combined commands subsequently created were the Mediterranean, originally under General Dwight D. Eisenhower and later under Field Marshal Sir Henry Maitland Wilson; the Allied Expeditionary Force for the liberation of Europe, under General Dwight D. Eisenhower; and the Southeast Asia Command under Admiral Lord Louis Mountbatten. The command designated as the U. S. Pacific Fleet and Pacific Ocean Areas, under Admiral Chester W. Nimitz, was not at first an Allied command, but entirely American, though British forces later came under Admiral Nimitz' direction. The China-Burma-India theater, commanded originally by General Joseph Stilwell, was later divided between the Southeast Asia Command and the China theater, in which Generalissimo Chiang Kai-shek was commander in chief. The Russians never participated in the activities of the Combined Chiefs of Staff, nor did their forces in whole or in part ever come under the direction of an Allied commander in chief.

E. PROGRESS OF MAJOR OPERATIONS FROM DECEMBER 7, 1941 TO END OF WAR

In Section A. of this summary, a brief account has been given of the progress of the war prior to the entry of the United States. In this section we shall trace in broad general terms the events in the various major theaters of operations from that date until the end of the war.

1. THE RUSSIAN THEATER, December 7, 1941 to the end of 1942.

Having failed to take Moscow, the German armies retired to their "winter line" from the Baltic to the Black Sea, which held fast. They prepared to launch a new major offensive in 1942.

Sound military judgment would have dictated an attack from the German center in a northeasterly direction, with the object of engaging and destroying the main Russian reserves which were concentrated east and northeast of Moscow. Had this been accomplished, European Russia would have been in German hands. The Russian armies were the true German objective, as the commander in chief on the Russian front, Field Marshal von Bock, knew.

Hitler, however, had other views. In his opinion, the Germans would do better to drive straight east to the Volga in the area of Stalingrad and invade the Caucasus. The purpose was to cut Russia in two, depriving the Russians of their Caucasian oil supply. Beyond this, as General Marshall observed in his report, "was evidently the Napoleonic dream of a conquest of the Middle East and India by a gigantic double envelopment, with one pincer descending from the Caucasus through Tiflis

and the other from North Africa across Egypt, Palestine and the Arabian Desert."

But the line of communications of the German army before Stalingrad and in the Caucasus was fatally insecure as long as the Russian armies stood undefeated on its northern flank. Hitler, as General Keitel admitted, "failed completely to estimate properly the reserve of Russian industrial and productive power east of the Urals," and overruled the recommendations of his High Command.

The German armies, in the offensive of 1942, drove to the gates of Stalingrad and the foothills of the Caucasus. At Stalingrad, the Russians turned and stood fast at last. There, 1300 miles from the eastern borders of Germany, far from the sources of German power, the Germans fought desperately from August to November to break the Russian resistance. They poured in men, they poured in supplies. It was in vain. Stalingrad held.

On November 22, 1942, the Russian counteroffensive rolled down upon the exhausted German armies. The Germans fell back from Stalingrad, leaving an encircled army there to interrupt the Russian rail communications as long as possible. They fell back from the Caucasus. The last great German offensive in Russia was at an end.

From that day forward, Germany was on the defensive, a beaten nation.

2. THE NORTH AFRICAN THEATER, December 7, 1941 to the end of 1942:

Hitler's grand plan for conquering the Middle East and joining the Japanese was broken in the north by the Russians. No better future attended the southern prong of the offensive, which was to thrust across North Africa, from Libya into Egypt, aiming toward the valley of the Nile and the Suez Canal.

In June, 1942, Marshal Rommel launched a German-Italian offensive which swept the British out of Libya, back across the frontier of Egypt, and seemed on the point of taking Alexandria, Cairo and Suez. But he was checked at El Alamein, on the north coast of Egypt. Both sides began building up for a new offensive—the Germans to continue their push for the Nile, the British to drive them back out of Egypt.

In October, 1942, the British 8th Army under Field Marshal (then General) Sir Bernard L. Montgomery launched a major attack at El Alamein and completely routed the Axis army of Marshal Rommel. Montgomery chased Rommel west across the top of Africa.

The first great American offensive against Germany was neatly timed to coincide with Montgomery's victory. In November, American and British troops landed in the western part of North Africa, under the command of General Eisenhower.

The Russians had been demanding a second front—an invasion of western Europe by the British and Americans in order to divert German power from the Red Army. But the American army was not ready and the British army was too weak. A landing in France was likely to result in a disaster. Even a limited operation, due to the shortage of shipping and landing craft and the persistence of the U-boat campaign, was considered out of the question.

But the Germans could not react in their full strength against a landing in French North Africa. Defense of that area would require a great effort, especially in aircraft, which would help the Russians. If the invasion succeeded, the Germans would be confronted with the possibility of further invasion of a Southern France or Italy, which would pin down more German troops for garrison duty. The army of Marshal Rommel would be caught between two fires and its fate would be sealed. With the elimination of Rommel, the whole of the North African shore would be in Allied hands.

There was, of course, to be considered the possibility that the Vichy French garrison would resist, and that in consequence Marshal Pétain might declare war on the Allies and bring French forces, especially the French fleet, into action against us. This was a chance that had to be taken.

In the outcome, there was some French resistance, but so careful had been the preliminary undercover preparation (well before the invasion began) that it soon was transformed into French cooperation. The French fleet, instead of joining the Germans, was scuttled in Toulon harbor by its crews. Morocco and Algeria fell into our hands almost at a blow. The Germans began a desperate attempt to reinforce Tunisia; an Allied drive on the naval base of Bizerte just fell short of reaching its objective in time. But as Allied reinforcements poured into French North Africa, and the pursuit of Rommel continued, it was clear as 1942 ended that in Africa as well as in Russia, the initiative had definitely passed from the Axis to the Allies. The siege of Fortress Europa was about to begin.

3. THE PACIFIC THEATER, December 7, 1941, to the end of 1942.

In the first five months after Pearl Harbor, every important military position in the Philippines and the Dutch East Indies was captured by the Japanese; all organized resistance ceased; the Allied air and naval forces were destroyed or driven to distant ports of refuge. Singapore fell in February. Thailand joined the Japanese; Burma was invaded, the British and Chinese forces there decisively defeated,

Rangoon and Mandalay taken, and the Japanese reached the Chinese frontier, cutting the Burma Road, China's last link with the outer world. Guam and Wake islands were captured. The Japanese took over New Britain and seized positions on the north shore of Australian New Guinea and in the Solomon Islands. Corregidor fell on May 6, 1942.

As Corregidor fell the Japanese were starting on the second phase of their strategy, a move toward Australia. They sent a fleet toward Port Moresby, on the south shore of Australian New Guinea—an admirable steppingstone for operations against Australia. But American naval forces engaged the Japanese fleet in the Battle of the Coral Sea. Both sides suffered severe losses in a far-flung fight, in which the airplane was the principal weapon. The Japanese suffered worst. Not again were Japanese warships to appear in strength so near Australia; the Japanese navy had in this direction, apparently, reached the outermost limits of its power.

Early in June the Japanese made their second major effort by sea. This was no less than an attack directed on Midway Island, and it was intended to be followed through by an all-out amphibious assault on the Hawaiian Islands to deprive the United States of its focal point of operations in the Central Pacific. The result was the Battle of Midway and a smashing defeat for the Japanese at the hands of American naval and land-based air forces—the worst disaster that the Imperial Japanese navy had ever suffered. A simultaneous air raid on Dutch Harbor, in the Aleutians, was beaten off, and all the Japanese accomplished was the occupation of the two small Aleutian Islands of Kiska and Attu.

Nevertheless, the Japanese assembled forces in the Solomon Islands, building a large airfield on Guadalcanal for a drive south to the New Hebrides and New Caledonia. This was part of the Japanese plan to isolate Australia as a preliminary to invading it.

To protect Australia, our essential base in the Southwest Pacific, America took the offensive against the Japanese forces in the Solomons.

Rarely in the long history of warfare has there been a bolder decision. The Japanese fleet was superior to ours in almost every element of fighting strength. The Japanese air force outnumbered ours in all classes of combat planes. The Solomon Islands lay 3,000 miles away from our nearest major base at Pearl Harbor; they were but 1,000 miles from the Japanese base at Truk in the Carolines.

On August 7, 1942, American marines began landing at Guadalcanal and Tulagi. They won a foothold. But offshore, we

suffered a naval disaster. The Japanese sank four heavy cruisers. For a time our troops on Guadalcanal were virtually isolated, and they faced brutal Japanese opposition on the island. The Americans stayed there, but just barely able to do so. Then the tide turned—we won a series of naval victories—and as the year ended, though the Japanese were still trying, with some success, to reinforce their troops on Guadalcanal, they were reduced to operating by night. It was clear that they had lost command of the sea and the air in that area, unless they chose to put in their main fleet and risk all.

In truth, the initiative in the Pacific had as definitely passed to the Allies as it had in Europe. This was not as yet realized, either in Japan or in the United States. After Guadalcanal, the Japanese never attempted another major offensive in any theater, by land or sea.

Like the Germans after Stalingrad, however, they clung desperately to every position they held until driven from it. They wasted away their naval and air strength in dribblets to reinforce positions they could not hold. They had captured their empire, but they were to prove incapable of holding it.

It had taken three years for the tide of war to turn against the Germans. Against the Japanese it turned in twelve months.

4. 1943 THE YEAR OF PREPARATION: ALL THEATERS:

In 1943 the Allies, not yet prepared to take the offensive in full force, strove to improve their positions while making ready their great reserves of power.

In Russia the campaign of 1943 was one of steady, but on the whole unspectacular, Russian progress toward the west. By the year's end, the greater part of the soil of Russia had been cleared of the German invaders. The Germans clung desperately to every inch of ground until they were driven from it. They held exposed forward positions to the bitter end rather than adopt the principle of elastic defense in depth. This cast a curious and sinister light on the effect of the Nazi mentality on military operations. Already one heard talk of Fortress Europa. One recalled the 1940 words of Goering—"If we Germans lose this war, we will pull down with us the pillars of western civilization." The Germans were sacrificing their best troops in the vain attempt to hold ground which could not be held.

In the Pacific, 1943 passed in what seemed to be small-scale operations in the Solomon Islands and New Guinea plus the recovery of Attu and Kiska. Toward the year's end, the first hint of the coming major offensive in the Central Pacific came with the sudden seizure of Tarawa and Makin islands—the former with heavy

casualties which obscured in many minds the significance of this gambit in a game which was to end in Tokyo Bay. The Japanese throughout the year persisted in frittering away their forces in dribblets.

The Mediterranean captured the major headlines. The destruction of the Axis armies in Tunisia—the conquest of Sicily, followed by that of Sardinia and Corsica—the invasion of Italy, the sanguinary struggle at Salerno, the advance northward—the fall of Mussolini and the surrender of the Italian government and the Italian fleet—these were developments of a wholly preparatory and preliminary nature as far as the attack on Germany was concerned, but they seemed vitally important news at the time.

Two developments in 1943 were of major military importance to the progress of the war against Germany. One was the final winning of the Battle of the Atlantic and the virtual extinction of the submarine as a major factor in the war. The other was the rising scale of air attacks upon Germany.

Ever since the Germans had, in 1940, come into possession of the ports and air bases of Norway and France they had continued their persistent and dangerous efforts to cut off the seaborne communications of the British Isles. These were the lifelines of the British people; and the only means by which military effort of any sort could be carried on from the British Isles as a base against Germany. With the perfection of new anti-submarine measures (notably radar and small escort carriers) Allied shipping losses began to go down in 1943, while ship construction went up. Finally in the summer of 1943 the losses had fallen low enough to be negligible, or nearly so, from a military point of view, while submarines were being sunk in increasing numbers. After August, 1943, it could be said that the Battle of the Atlantic was won, and a major American offensive in western Europe became possible.

The great air attacks against Germany were likewise an essential preliminary of invasion. During 1943 these attacks were expanded from the British night raids to a "round the clock" basis by American daylight bombers. The occupation of air bases in southern Italy gave new direction to these operations. The bomb targets during 1943 were the focal points of German industry. It was a preparation without which the invasion of Europe could not possibly have succeeded.

5. 1944 THE YEAR OF DECISION: EUROPEAN THEATER:

As 1944 opened, the world was electric with expectancy. Men hoped that the great decisions of the war were at hand, that the long struggle was drawing to a

close. There was no longer any doubt of the outcome. The only question was: "How long?" Of all the great decisions expected of that year, the greatest was the invasion of western Europe by the American and British armies.

The year began with an intensification of the Allied air attacks on Germany on a scale beyond anything previously known. On almost every operational day, 700 to 1,000 heavy bombers were out over Germany. The delivery of 2,000 to 3,000 tons of bombs on a single target area in a single raid became commonplace. In February the Allied bombers suddenly, and significantly, shifted their attention to the destruction of German aircraft plants—then almost wholly engaged in producing fighter planes for the defense of Germany—with crippling results. To this was added the constant challenge to German fighter strength in the air. As spring wore on, the weight of bombing attack shifted to the coastal area and the railways behind it. The pattern of invasion began to take form.

Before the great blow fell, there was a prelude in Italy, where the Allied armies—stalled during the previous winter before Cassino—jumped off in a major offensive on May 11, which carried them to Rome by June 4th, though it did not produce the final destruction of the German armies in the peninsula.

In the east, the Russians maintained their steady series of offensives, now on one part of their long front, now on another. They drove into Poland, they reached the Dniester and crossed into Rumania.

Meanwhile, in Great Britain, the power of the United States gathered for the final and decisive assault. On June 6, the armies of General Eisenhower, under a cloud of air cover and guarded by a huge naval force, were launched across the Channel.

Once more the Germans, under Field Marshal Rommel, made war according to Hitler's principles. The Atlantic Wall had been so propagandized in the German Army that every man had an almost hysterical faith in it. Rommel's plan for the defense of the French coast was a rigid unyielding linear defense of his forward positions. He had succeeded in inducing his superiors in Berlin to overrule his immediate military Chief, Field Marshal von Rundstedt, who wanted to hold the forward positions lightly and to concentrate all available reserves, especially armor, for a mobile defense based on counter-attack.

The result was that when the Allies, by concentrating overwhelming power on a narrow front, broke through the Atlantic Wall, there were no reserves available to prevent them from establishing a secure lodgment. Nor did German reserves thereafter arrive at any one time in sufficient numbers to effect anything decisive. For

this there were three reasons. First, a large part of the German Army in France was immobilized on the northeastern coast, opposite the Pas-de-Calais. The Allies had carefully built up deceptive threats of a second landing there. This error the Germans did not discover for several weeks. Second, the Allied air forces systematically broke down every rail and highway bridge over the rivers Seine and Loire, thus virtually isolating the northwestern segment of France and the German troops there. Third, every road, every train, practically every German soldier was under constant attack by the overwhelmingly superior Allied air power. German reinforcements arrived only in small detachments, slowly, by night marches, lacking much of their transport and equipment, long behind their schedule. As each detachment reached the front it usually found itself immediately involved in the fighting. The Germans could build up no reserves to undertake decisive counterattack.

The Allied forces were being built up rapidly. Dependent at first on the use of open beaches and the wonderful artificial harbors with which they had been provided, they also soon had several small seaports for their use, and after the capture of the port of Cherbourg, their build-up was spectacularly rapid. There was plenty of hard fighting, but there was never a time when the Germans enjoyed sufficient superiority at any crucial point to accomplish very much. Von Kluge, who had relieved Von Rundstedt as commander in chief in the west, wanted to withdraw deep into the interior of France to save his force when the breakout came. He was overruled by Hitler and relieved of his command, Von Rundstedt again taking over with specific instructions to hold on.

On July 25, the American Third Army and part of the First Army broke out at the western extremity of the Normandy pocket, swept round behind the German forces—pivoting on Caen, where the British held fast and moved slowly in conformity with the American sweep. The German Seventh and Fifth Panzer armies were rolled back against the Seine. All German resistance in northern and central France collapsed. The Allied forces swept forward, crossed the Seine, liberated Paris, and raced for the Rhine.

The landing of the Sixth Army Group in the south of France—the capture of Brussels and Antwerp—the airborne attempt to force a quick crossing of the Rhine at Arnhem, which threw us forward across two rivers but failed at the third—all these were but incidents leading up to the final assault on the western defenses of Germany.

The real brake upon our advance was the impossibility of continuing to supply our racing troops. All our supplies had to

come into France by sea. We were still dependent on the mined and battered port of Cherbourg plus a few smaller ports and artificial harbors. In every other major port from the mouth of the Loire right around to Calais, the Germans had left a garrison to resist to the end. The railway system of France and Belgium had been so shattered by our effective pre-invasion bombing that it could not operate at full capacity.

The Allied pause gave the Germans time to re-equip their shattered armies, to put new levies into the field. When the Allied advance was resumed, it ran almost immediately into stubborn opposition. We had to have a port nearer the decisive portion of the front. The clearing of the Scheldt to open Antwerp was therefore given major priority.

It was plain to the Germans as it was to our own command that the moment Antwerp was available we should begin the build-up for our last decisive offensive. The Germans had the choice of waiting for it, or trying a counterattack in the hope of rocking us off balance and delaying the end a little longer. Any sensible German government would have surrendered after the Normandy break-out. Hitler held on, bleeding Germany to death rather than to give in, and now he tried a last desperate gamble to delay the end. Antwerp was opened for Allied shipping on November 29.

On December 15, the Germans launched a desperate counterattack against the Allied center in the wooded region of the Ardennes.

This operation was Hitler's personal conception. Its purpose was no less than the recapture of Antwerp and the cutting off of the northern portion of the Allied armies. It resembled in this respect the German break-through on the Meuse in 1940. But the German army of 1944, hopelessly outclassed in the air and painfully scraping together, almost gallon by gallon, a reserve of gasoline for armored movement on the ground, was not the German army which had thundered across France four years before. A little ground was gained—a bulge driven in the Allied front under cover of lowering skies. Then the weather opened, the Allied air squadrons swept down, the Allied armies, perfectly handled, closed in from either side; the forlorn hope of the German army perished in the forests of the Ardennes. Hitler had expended his last reserve.

As the year ended, the western Allies were preparing for the great advance into the heart of Germany to join the oncoming Russians. There were rumors of an inner fortress, a "national citadel" in the Alps, where Hitler and his myrmidons would make their last stand and perish in Wagnerian flames.

6. 1944 THE YEAR OF DECISION: PACIFIC THEATER:

For Japan, 1943 had been a year of lost opportunities. The Japanese would not risk their main fleet to restore command of the seas around the Solomon Islands. They would not risk it for a full-scale attack on Hawaii. They deliberately assumed the strategic defensive. They permitted the United States to overtake and pass them in naval and air power.

On January 31, 1944, Admiral Nimitz thrust into the heart of the Marshall archipelago and captured the key atoll of Kwajalein.

The theory of the Japanese had been that these island groups were a defensive shield. They considered that with air bases on each island, a concentration of land-based air power could destroy any attacking force seeking to penetrate the Central Pacific. It never occurred to Japanese strategists that the American Navy was capable of building so many carriers that it could produce overwhelming air superiority over one island; and that having one island would give the Americans, also, land-based aircraft; and this process would be indefinitely repeated, so that the Japanese islands would serve as steppingstones westward across the Pacific.

Yet this was the pattern of war which Admiral Nimitz began to unfold, in giant strides, from Kwajalein to Eniwetok on the western edge of the Marshall group; and then to Saipan in the Marianas Islands, only 1,300 miles from Tokyo. On Saipan the Japanese garrison fought fiercely, but only a halfhearted attempt by the Japanese navy was made to relieve them. By the end of July, not only Saipan but the neighboring islands of Guam and Tinian were in American hands, and the base for long-range bombardment of Japan was established.

Thus, in six short months, the whole structure of Japan's mid-Pacific defenses had collapsed. The United States was within striking distance of the heart of the Japanese Empire.

Meanwhile, in the Southwest Pacific, General MacArthur's forces had advanced in a series of "bounds" westward to the tip of New Guinea, northward to the Admiralty Islands and New Britain. Behind them, like Nimitz, they left many isolated Japanese garrisons cut off, helpless to interfere. In Burma, a bold Allied advance had carried through to Myitkina. In China, the Japanese were able to accomplish nothing decisive, and the first bombs from our China-based long-range B-29's were already falling on Japanese cities.

On October 20, General MacArthur's troops began landing on Leyte, in the heart of the Philippine Islands. Then at last the

Japanese High Command took the gamble—a desperate gamble now—of throwing their main fleet into action. It was too late. Nimitz was supporting MacArthur in full strength. For three days, in a series of naval actions ranging over thousands of miles of sea, the struggle went on. When it was over, Japanese sea power had ceased to exist.

7. 1945 THE YEAR OF VICTORY:

The military events of the year 1945 are remembered in the minds of all Americans. This was the year of victory, the year in which the closing vise of the Allied armies of the west and the Russian armies of the east snapped shut on the remains of Nazi Germany; the year in which our sea and air power battered Japan into surrender with the final terrible climax of the atomic bomb attacks at Hiroshima and Nagasaki.

Viewed in retrospect, the details do not seem to matter, only that victory came. In Europe the Germans stuck to their Hitlerian pattern of holding ground to the last. They fought west of the Rhine instead of withdrawing behind it. They permitted two armies to be trapped in the triangle between the Saar and the Moselle, and thus opened a gap into the heart of Germany which they no longer had reserves to fill. They made a desperate defense of the Ruhr and allowed a whole army group there to be encircled. They flung counter-attack after counterattack against the Russians in reckless attempts to relieve besieged Budapest. These efforts were made

at the price of being unable to withdraw to their much-advertised "last stand" in the mountains of the south. From east and west the avenging armies moved in, at accelerating rates of progress and when the collapse came it was utterly complete. On May 7, 1945, at Rheims, the leaders of the Third Reich surrendered. Adolf Hitler already lay dead in the ruins of Berlin.

In the Pacific there was still some uncertainty as to when Japan would give up. Luzon was invaded in January and by July the Philippines were cleared of Japanese troops. The Marines advanced to Iwo Jima, steppingstone to Tokyo. In April, American forces landed on Okinawa and began a long and costly struggle for the last outpost to Japan.

The bombing attacks on the Japanese main islands increased in intensity. On August 6, came the terrible blow—the first atomic bomb used in warfare was dropped on the city of Hiroshima and wiped it from the land. Events then moved swiftly. Russia declared war on Japan and moved into Manchuria and Korea. The second atomic bomb dropped on Nagasaki. The leaders of Japan on August 14, declared their intention to surrender. On September 1, aboard the U. S. S. *Missouri*, in Tokyo Bay, the articles of surrender were signed.

The most terrible war in history, global in scope, ended with the surrender of the nations which had started it.

Important Conferences of World War II

Date	Place	Participants	Subject
August 9-12, 1941	U.S.S. <i>Augusta</i> at sea	Roosevelt-Churchill	Atlantic Charter
January 14, 1943	Casablanca	Roosevelt-Churchill	Unconditional surrender terms
August 17, 1943	Quebec, Canada	Roosevelt-Churchill	War planning
November 22, 1943	Cairo, Egypt	Roosevelt-Churchill-Generalissimo Chiang Kai-shek	Decision to strip Japan of all gains
December 4, 1943	Teheran, Persia	Roosevelt-Churchill-Stalin	Planning the European war
Sept. 11-16, 1944	Quebec, Canada	Roosevelt-Churchill-Eden and military staffs	Speed defeat of Japan and Germany
February 7, 1945	Yalta, Crimea	Roosevelt-Churchill-Stalin	Occupation of Germany and liberated people
April 25, 1945	San Francisco	Representatives of 46 nations	United Nations Charter
June 26, 1945	San Francisco	Representatives of 50 nations	World Security Charter
July 17, 1945	Potsdam, Germany	Truman-Attlee-Stalin	The Hard Peace terms

AMERICAN PACIFIC ISLANDS

Source: Encyclopaedia Britannica

The insular possessions of the United States in the Pacific Ocean are tiny sand or coral isles and islets which were of utterly no importance for many years, and then became overnight vital key spots in World War II against the Japanese. Two of them—Wake, where the Marines fought so valiantly and Midway, near where the Japanese met their first big sea defeat—have become famous names in American military history.

Midway Islands

The Midway group, 1,200 miles northwest of Hawaii, was discovered in 1859 and formally declared a U. S. possession in 1867. The component islands—Sand, with an area of 850 acres and Eastern, 328 acres—are surrounded by a coral reef five miles in diameter and by numerous small islets, giving the total group an area of 28 square miles. They first acquired importance in 1903 as a station on the trans-Pacific cable route, second in 1935 as a stop on Pan American's Pacific airline, and third as a U. S. naval and air base in the war against Japan.

One of the first big Japanese defeats of the war, and a defeat later to take on significance as one of the big strategic defeats of the war, occurred near Midway on June 4-6, 1942, when U. S. air and sea power destroyed or routed a large enemy task force headed east. As late as 1936, Midway's population was only 118, but it was a beehive of activity during the Pacific war, with large numbers of army, navy and air personnel stationed there.

Wake Island

Wake Island, consisting of the islets of Wake, Peale and Wilkes, was discovered by the British in 1796 and annexed by the United States in 1898. For many years it was neglected and uninhabited except for occasional visits by Japanese bird hunters. Gradually its four square miles situated 2,130 miles due west of Hawaii assumed great potential importance as an airline base in peacetime, as a naval base in wartime. The sand and coral group went under the Navy Department in 1934. By 1941

Wake was a key station on Pan American's trans-Pacific airline, was guarded by several hundred U. S. Marines, and was the scene of a sizeable Navy construction project. On Dec. 7, 1941, the Japanese attacked Wake Island with bombing planes, followed soon after by naval bombardment and attempts at landing. The resistance of the Marines, who held out until Dec. 23 against overwhelming odds and with no hope of relief, became an epic of heroism in U. S. military history.

Howland, Baker, Jarvis

Baker and Howland Islands are small coral atolls near the crossing of the Equator and the International Date Line, about 1,880 miles southwest of Hawaii. They were discovered by American whaling captains in the mid-19th Century. Baker is a mile long and 1,500 yards wide; Howland is two miles long and 750 yards wide.

Jarvis Island, about two miles long and a mile and a half wide, is 1,150 miles east of Howland and Baker, and slightly below the Equator.

Baker, Howland and Jarvis were colonized in 1935 by young Hawaiians who established radio and aerological stations there under the authority of the U. S. Department of the Interior, which took jurisdiction of the islands a year later.

Canton, Enderbury

Canton Island is about 1,850 miles southwest of Hawaii, and Enderbury lies thirty-two miles southeast of Canton. Canton is a narrow strip of land varying from fifty to 600 yards in width and enclosing a lagoon about nine miles long and three miles wide. Enderbury is an oblong, about three and a half by one and a half miles.

Since Canton is a good seaplane base, and Enderbury is regarded as a suitable base for land planes, these two fly specks on the map took on new importance with the progress of the air age. The United States and Britain disputed at length over their ownership and finally agreed on a plan of joint operation and control on Aug. 11, 1938.

The United States was not one of the Allies in the First World War. Since there was no common agreement on the objects to be attained by the war, the United States was an "associate" rather than an "ally."

United States Servicemen mailed three billion letters a year in World War II. Giving soldiers and sailors free mail cost the post office department about \$91,000,000 a year.

By July 1944, G. I. Joes were using scarcely a single weapon that was the same as those in use when Pearl Harbor was attacked.

Two early attempts to invade Japan were frustrated. Kublai Khan tried in vain to land on the Island of Kyushu in 1274. In 1281 he sent a larger expeditionary force of Mongols to the Japanese Islands but his armada was destroyed by a typhoon.—*Encyc. Brit.*

ORDER OF BATTLE

¹Greatest strength of Continental Army was about 35,000, November 1778.

²Total number undoubtedly much larger, since records were incomplete.

³Represents enlistments; hence in excess of actual number of troops since reenlistments were counted as term of service.

⁴Actual deaths larger since records of Confederates far from complete.

⁵Estimated on Union records but number believed to be considerably larger.

⁶Based on highest total for year 1865.

⁷Excludes 999 Confederate Marines of which 527 were casualties.

⁸Excludes 28 killed on the U. S. S. Maine.

⁹Philippine Insurrection, 1899 to 1902; Cuban pacification, 1906 to 1909; China Relief Expedition, 1900 to 1901; Mexican Border, 1911 to 1916; Punitive Expedition, 1916.

¹⁰Approximately. Includes National Guard in Federal Service during Mexican border incidents.

¹¹Number incurred among 182,674 individuals, many having been wounded more than once.

¹²This figure includes those who served in the Nurse Corps of the U. S. Navy but does not include commissioned and warrant officers who were serving in the Regular Navy and Naval Reserve Force.

¹³Includes 119,300 WAVE's and Nurses.

¹⁴Does not include 22,758 Women Marines.

¹⁵Total casualty figures do not include unaccounted-for prisoners of war.

An appalling number of lives were lost during the first part of World War II because many servicemen of the warring nations did not know how to swim. As a re-

sult, efforts have been made in several countries to introduce compulsory swimming courses in all schools and colleges.—*Encyc. Brit.*

Killed in Battle—Wars Compared

*Includes 3,404,949 disarmed enemy forces.

SENIOR ARMY AND NAVY COMMANDERS

Source: Army and Navy Journal.

WAR DEPARTMENT AND ARMY

Secretary of War—Robert P. Patterson.
 Under Secretary of War—Kenneth Royall.
 Assistant Secretary of War—Howard C. Petersen.
 Assistant Secretary of War, Air—W. Stuart Symington.
 Chief of Staff—General of the Army Dwight D. Eisenhower.
 Deputy Chief of Staff—General Thomas T. Handy.
 Commanding General, Army Air Forces—General Carl A. Spaatz.
 Deputy Commander, AAF, and Chief of Air Staff—Lt. Gen. Ira C. Eaker.
 Commanding General, Army Ground Forces—General Jacob L. Devers.
 Commanding General, Army Service Forces—Lt. Gen. LeRoy Lutes.
 Deputy Commanding General, ASF, and Chief of Staff—Maj. Gen. Daniel C. Noce.

THEATER COMMANDERS

J. S. Forces, European Theater—General Joseph T. McNarney.
 J. S. Air Forces in Europe—Maj. Gen. Idwal H. Edwards.
 Office of Military Government for Germany—Lt. Gen. Lucius D. Clay.
 Commander of Allied Forces in Japan—General of the Army Douglas MacArthur.
 J. S. A. Forces, Middle Pacific—Maj. Gen. George F. Moore.
 J. S. A. Forces, Western Pacific—Lt. Gen. Wilheld D. Styer.
 Pacific Air Command—Lt. Gen. Enis C. Whitehead.
 J. S. Forces, China Theater—no replacement announced.
 J. S. Forces, India-Burma Theater—Maj. Gen. T. A. Terry.
 J. S. Forces in Mediterranean Theater—Lt. Gen. J. C. H. Lee.
 J. S. Forces in African-Middle East Theater—Maj. Gen. Benjamin F. Giles.

ARMY COMMANDERS

First Army—General Courtney H. Hodges.
 Second Army—Lt. Gen. Albert C. Wedemeyer.
 Third Army—Lt. Gen. Geoffrey Keyes.
 Fourth Army—General Jonathan M. Wainwright.
 Fifth Army—Lt. Gen. Walton H. Walker.
 Sixth Army—No replacement announced.
 Seventh Army—Lt. Gen. Oscar W. Griswold.
 Eighth Army—Lt. Gen. Robert L. Eichelberger.

AIR COMMANDS

Strategic Air Command—General George C. Kenney.
 Tactical Air Command—Maj. Gen. E. R. Quesada.
 Air Defense Command—Lt. Gen. George E. Stratemeyer.
 Air Materiel Command—Lt. Gen. Nathan F. Twining.
 Training Command—Lt. Gen. J. K. Cannon.
 Air Transport Command—Lt. Gen. Harold L. George.
 Air University—Maj. Gen. Muir S. Fairchild.
 Air Proving Ground Command—Maj. Gen. Donald Wilson.

NAVY DEPARTMENT AND FLEET

Secretary of the Navy—James Forrestal.
 Assistant Secretary of the Navy—W. John Kenney.
 Assistant Secretary of the Navy, Air—John L. Sullivan.
 Chief of Naval Operations—Fleet Admiral Chester W. Nimitz.
 Vice Chief of Naval Operations—Vice Adm. D. C. Ramsey.
 Naval Inspector General—Adm. C. P. Snyder (Ret.)
 General Planning Group—Rear Adm. George C. Dyer.
 Deputy CNO (Personnel)—Vice Adm. L. E. Denfeld.
 Deputy CNO (Administration)—Vice Adm. R. L. Connolly.
 Deputy CNO (Operations)—Vice Adm. F. P. Sherman.
 Deputy CNO (Logistics)—Rear Adm. Robert B. Carney.
 Deputy CNO (Air)—Vice Adm. A. W. Radford.
 Deputy CNO (Special Weapons)—Vice Adm. W. H. P. Blandy.

FLEET COMMANDERS

Pacific—Adm. John H. Towers.
 Atlantic—Adm. Jonas H. Ingram.
 Third—Vice Adm. Howard F. Kingman.
 Fifth—Vice Adm. Alfred E. Montgomery.
 Seventh—Vice Adm. Charles M. Cooke, Jr.
 Eighth—Adm. Marc A. Mitscher.
 Tenth—Vice Adm. Bernhard H. Bieri.

NAVAL FORCES COMMANDERS

Europe—Admiral Richard L. Connolly.
 Japan—Vice Adm. Robert M. Griffin.
 Germany—Rear Adm. Roscoe E. Schuirmann.
 Mediterranean—Rear Adm. Jules James.

SEA FRONTIER COMMANDERS

Eastern—Adm. Thomas C. Kinkaid.
 Western—Adm. Richard S. Edwards.
 Caribbean—Vice Adm. William R. Munroe.
 Gulf—Rear Adm. John F. Shafroth, Jr.
 Hawaiian—Rear Adm. Edward W. Hanson
 (Acting).
 Alaskan—Rear Adm. Freeland A. Daubin.
 Philippine—Vice Adm. James L. Kauffman.

MARINE CORPS

Commandant—General A. A. Vandegrift.
 Asst. Commandant—Maj. Gen. Lemuel C.
 Shepherd.
 Commander, Fleet Marine Force, Pacific—
 Maj. Gen. Allen T. Turnage.

COAST GUARD

Commandant—Admiral Joseph F. Farley.
 Asst. Comdt.—Rear Admiral Merlin O'Neil.

SELECTIVE SERVICE IN WORLD WAR II

By Major General Lewis B. Hershey

Director, Selective Service System

When the Japanese attacked Pearl Harbor in December 1941, the Selective Service System had been functioning smoothly for 13 months. Out of the approximately 198,000 personnel of the Selective Service System at the end of the first quarter of 1946, only 15,200 were paid employees. Those serving without compensation include the local and appeal board members, government appeal agents, and examining physicians and dentists. Fifty-six percent of them served continuously throughout the period of hostilities.

From October 16, 1940, to August 31, 1945, more than 31,000,000 men under the age of 45 years were registered and classified, and more than 17,300,000 registrants were examined or forwarded to the armed forces for examination.

It is now apparent that successful operation of Selective Service was due in a large degree to its policy of decentralization. The 6,443 local boards were made up of three or more local citizens. Appeal boards were set up in each State, and the decisions of these boards on questions of classification were final except in unusual cases involving occupation or hardship, which were subject to Presidential appeal.

State headquarters supervised the work of the local board under the direction of the state director, who was appointed by the President on the recommendation of the governor.

The enactment of the Selective Service Act in 1940 marked the first peacetime conscription in United States history. In its original form the act provided for one year of military training for men 21 through 35 years of age. Not more than 900,000 were to be in training at one time. In August 1941, men above 27 years of age were relieved from liability for training and service.

The act barred all bounties and substi-

tutes; exempted only clergymen, divinity students, high-ranking public officials, and conscientious objectors; and authorized deferments at the discretion of the President.

Although age was the most important factor in determining who should register, the selection of men for induction or deferment was, until 1944, largely dependent on marital status and occupation. Issues which proved most controversial were those involving the age limit for induction, induction of fathers, enlistments, and deferment of farmers and students.

Recruiting by the armed forces of men 18 through 37 years of age was stopped on December 5, 1942. Before that date all men inducted were enrolled in the Army. The new order provided men for the Navy, Marine Corps and Coast Guard as well. This was done to provide a closer control over manpower in view of the heavy demands of the armed forces, industry, and agriculture.

On August 15, 1945, after the surrender of Japan, the President ordered the induction of men over 26 years of age. A few days later he issued an executive order permitting the recruiting of men 18 through 37 years of age.

By 1946 most men between the ages of 20 and 30 had already served or were still in service, or were fathers, or had already been rejected by the armed forces, or were otherwise unavailable for service. There were perhaps some 72,000 men in the 20-to-30 group who might be inducted, and probably half of these would be rejected. Thus Selective Service found itself, less than a year after the end of the greatest war in history, with peace treaties not yet signed and the international situation far from stabilized, faced on the one hand with continuing needs of the armed forces for men and on the other hand with a virtually depleted source of manpower. The man-

Classification of Registrants, Ages 18 through 25

(Numbers in thousands)

power picture, in the spring of 1946, is shown in the preceding table.

When the program for manpower mobilization was undertaken, it was not expected that the percentage of mentally or physically unfit would be as large as it proved. By August 31, 1945, of the 17,300,000 registrants between the ages of 18 and 45 examined, over 5,750,000 had been found unfit for military service.

A study of 20 percent of the 9 million examinations made between April 1942 and December 1943 showed that rejections ranged from 31.4 percent for January 1943 to 46.9 percent for December 1943. Rejection rates for whites were consistently lower than those for Negroes.

The highest rejection rates were for domestic service workers, emergency workers, the unemployed, and farmers and farm managers. Students had the lowest rejection rates. The principal causes for rejections of white registrants examined during the entire period covered by the study were (in order of magnitude) mental disease, musculoskeletal defects, hernia, cardiovascular defects, educational and mental deficiency, eye defects, neurological

defects, ear defects, tuberculosis and syphilis.

Of the registrants examined, 36.9 percent were reported to be free of physical defects. As age increased, the proportion of men with "no defects" decreased. Rejection rates varied considerable between and within regions. The highest rejection rates were found in the south, and the lowest rates in the northwest states.

Unlike previous draft legislation, the Selective Training and Service Act of 1940 recognized the principle that, when a country calls upon its citizens to leave their jobs and homes to bear arms in the national defense, the country is obliged to protect the citizen-soldiers' private interests so that they may return to civilian life with a minimum of loss. The act contains provisions which require employers, under certain conditions, to reinstate the discharged veteran to the job he left, or to a comparable one, without loss of any benefit to which he would have been entitled had he remained at his employment.

To be eligible for reinstatement the veteran must have received a certificate of satisfactory service, must still be qualified to perform the duties of his position, and must apply for reinstatement within 90 days of his discharge. Reinstatement is not compulsory if the employer's circumstances have so changed as to make it impossible or unreasonable for him to reemploy the veteran. The reemployment provisions are applicable only to men who worked for a private employer or the Federal Government, who held a position which was other than temporary, and who left the position for the purpose of entering the armed forces. Supplementary legislation extended similar reemployment rights to veterans of the United States Public Health Service and the Merchant Marine. The Merchant Marine veteran, however, must have received a certificate showing the completion of a "period of substantially continuous service" and must apply for reinstatement to his old position within 40 days after release from service.

After he is restored to his position, the veteran is entitled to the following additional rights: (1) He shall be considered as having been on furlough or leave of absence during his period of service; (2) He shall be entitled to participate in insurance or other benefits offered by the employer pursuant to established rules and practices relating to employees on furlough or leave of absence in effect with the employer at the time such person entered into such service and (3) He shall not be discharged from such position without cause within one year after such restoration.

Under the provisions of the act, one of the functions of the Selective Service Sys-

Rejection Rates

47	67.5	65.2	80.8

tem at the local board, state, and national levels, has been to assist in reemployment of the discharged veteran. This function began with the first discharges of men from the armed forces shortly after mobilization got under way and increased in tempo at the end of the war, when the men began pouring out of separation centers to find their places in civilian life.

Veterans' assistance begins with the local boards, the personnel of which has been supplemented by the appointment of reemployment committeemen—local citizens who serve without compensation. When a veteran goes to any local board for reemployment assistance, the committeeman, or a local board member, will confer personally with the employer, using every means possible to reach a solution satisfactory to the veteran within the rights established by the act. If the board is unable to obtain an amicable adjustment, the case is referred to the state director of Selective Service. The state director, acting through a veterans personnel division of the state headquarters, will undertake further negotiation. In the event that

all means for settlement fail, the case is referred, upon consent of the veteran, to the United States Attorney for legal action. The veteran is entitled to bring suit in the United States District Court, with the assistance of the United States Attorney, or he may bring suit by his own counsel. No fees or court costs are assessed against the veteran. The district courts are given jurisdiction specifically to require private employers to comply with the reemployment provisions of the law and, as an incident thereto, to compensate the veteran for any loss of wages.

As a matter of actual practice, by the end of March 1946, fewer than 300 cases required action by United States Attorneys. Thousands of reemployment cases had been satisfactorily settled by friendly and informal intervention on behalf of the veteran by a local board.

In September 1945, the Selective Service System released, in addition to the statutory provisions and procedures, a comprehensive handbook for the guidance of veterans and individuals and agencies concerned with their reemployment.

Longevity Allowances: General officers serving in the grade of Brigadier General and above do not receive longevity allowances. All other officers and enlisted men are entitled to an increase of 5 per centum of the base pay of their period for each three years of service up to 30 years.

Foreign Service or Sea Duty: The base pay of any commissioned officer shall be increased by 10 per centum for any period of service while on sea duty or duty in any place beyond the continental limits of the United States or in Alaska. Warrant officers and enlisted men receive an increase of 20 per centum.

Flying Pay: Officers and enlisted men shall receive an increase of 50 per centum of their pay when by orders of competent authority they are required to participate regularly and frequently in aerial flights.

Women's Army Corps: The pay of officers and enlisted women is the same as that for male officers and enlisted men of the Army of the United States in comparable grades.

¹An officer with dependents is not entitled to rental allowance under either of the following conditions: (a) while he is assigned public quarters and his dependents are not prevented by reason of orders of competent authority from dwelling with him; (b) while his dependents occupy public quarters. An officer without dependents is not entitled to rental allowance under any of the following conditions: (a) while he is on sea duty unless the sea duty is temporary duty not exceeding three months; (b) while he is on field duty unless his commanding officer certifies that he was necessarily required to procure quarters at his own expense; (c) while he occupies (or is assigned) public quarters.

²Subsistence allowance on this table is computed on the basis of a 30-day month. For a month of a greater or lesser number of days the amounts should be correspondingly increased or decreased.

³Personal cash allowance is \$416.67. ⁴Personal cash allowance is \$183.33. ⁵Personal cash allowance is \$41.67.

⁶A warrant officer promoted to commissioned warrant officer may be paid the pay provided for a warrant officer if greater than the pay of a commissioned warrant officer. When the total pay and allowances of a commissioned warrant officer shall exceed the rate of \$550.00 per month, the amount of the rental allowance to which such officer is entitled shall be reduced by the amount above \$550.00.

⁷Commissioned warrant officers during first 10 years of commissioned service are entitled to base pay at the rate of \$2520 per annum and the allowances of the second pay period; a certificate of creditable record is not required.

On January 9, 1929, James W. Beasley, a flagpole sitter, heard the national anthem and stopped sitting.—*F. P. A.*

Whales do not spout water, contrary to popular belief. The moist air blown from the whale's lungs condenses into drops of moisture in the colder atmosphere, giving the appearance of a fountain of water.

The greatest apparent speed of an ocean wave is about twenty-seven miles per hour. Ocean waves reach a height of fifty or sixty feet in the south Atlantic Ocean off the Cape of Good Hope.—*Encyc. Brit.*

The Potsdam Declaration

Text of the declaration issued at Potsdam, Germany, July 26, 1945, outlining the terms under which Japan would be allowed to surrender:

1. We, the President of the United States, the President of the national government of the Republic of China and the Prime Minister of Great Britain, representing the hundreds of millions of our countrymen, have conferred and agreed that Japan shall be given the opportunity to end this war.

2. The prodigious land, sea, and air forces of the United States, the British Empire and China, many times reinforced by their armies and air fleets from the West, are poised to strike the final blow at Japan. This military power is sustained and inspired by the determination of all allied nations to prosecute the war against Japan until she ceases to resist.

3. The result of the futile and senseless German resistance to the might of the aroused free peoples of the world stands forth in awful clarity as an example to the people of Japan.

The might that now converges on Japan is immeasurably greater than that which, when applied to the resisting Nazis, necessarily laid waste to the land, the industry, and the method of life of the whole German people.

The full application of our military power, backed by our resolve, will mean the inevitable and complete destruction of the Japanese armed forces and just as inevitably the utter devastation of the Japanese homeland.

4. The time has come for Japan to decide whether she will continue to be controlled by these self-willed militaristic advisers whose unintelligent calculations have brought the empire of Japan to the threshold of annihilation, or whether she will follow the path of reason.

5. The following are our terms: we will not deviate from them; there are no alternatives; we shall brook no delay.

6. There must be eliminated for all time the authority and influence of those who have deceived and misled the people of Japan into embarking on world conquest, for we insist that a new order of peace, security, and justice will be impossible until irresponsible militarism is driven from the world.

7. Until such a new order is established

and until there is convincing proof that Japan's war-making power is destroyed, points in Japanese territory to be designated by the Allies shall be occupied to secure the achievement of the basic objectives we are here setting forth.

8. The terms of the Cairo declaration shall be carried out and Japanese sovereignty shall be limited to the Islands of Honshu, Hokkaido, Kyushu, Shikoku and such minor islands as we determine.

9. Japanese military forces after being completely disarmed shall be permitted to return to their homes with the opportunity to lead peaceful and productive lives.

10. We do not intend that the Japanese shall be enslaved as a race or destroyed as a nation, but stern justice shall be meted out to all war criminals, including those who have visited cruelties upon our prisoners.

The Japanese government shall remove all obstacles to the revival and strengthening of democratic tendencies among the Japanese people. Freedom of speech and religion and of thought, as well as respect for the fundamental human rights, shall be established.

11. Japan shall be permitted to maintain such industries as will sustain her economy and permit the payment of just reparation in kind, but not those industries which will enable her to rearm for war.

To this end, access to, as distinguished from control of, raw materials shall be permitted. Eventual Japanese participation in world trade relations shall be permitted.

12. The occupying forces of the Allies shall be withdrawn from Japan as soon as these objectives have been accomplished and there has been established in accordance with the freely expressed will of the Japanese people a peacefully inclined and responsible government.

13. We call upon the government of Japan to proclaim now the unconditional surrender of all Japanese armed forces, and to provide proper and adequate assurances of their good faith in such action. The alternative for Japan is prompt and utter destruction.

Japan's Surrender

Text of Japanese surrender document signed aboard the U. S. S. *Missouri* in Tokyo Bay, September 2, 1945, Tokyo time (September 1, New York Time).

1. We, acting by command of and in behalf of the Emperor of Japan, the Japanese government and the Japanese im-

perial general headquarters, hereby accept provisions in the declaration issued by the heads of the governments of the United

States, China, and Great Britain July 26, 1945, at Potsdam, and subsequently adhered to by the Union of Soviet Socialist Republics, which four powers are hereafter referred to as the Allied Powers.

2. We hereby proclaim the unconditional surrender to the Allied Powers of the Japanese imperial general headquarters and of all Japanese armed forces and all armed forces under Japanese control wherever situated.

3. We hereby command all Japanese forces, wherever situated, and the Japanese people to cease hostilities forthwith, to preserve and save from damage all ships, aircraft and military and civil property and to comply with all requirements which may be imposed by the Supreme Commander for the Allied Powers or by agencies of the Japanese government at his direction.

4. We hereby command the Japanese imperial general headquarters to issue at once orders to the commanders of all Japanese forces and all forces under Japanese control, wherever situated, to surrender unconditionally themselves and all forces under their control.

5. We hereby command all civil, military, and naval officials to obey and enforce all proclamations, orders and direc-

tives deemed by the Supreme Commander for the Allied Powers to be proper to effectuate this surrender and issued by him or under his authority and we direct all such officials to remain at their posts and to continue to perform their non-combat duties unless specially relieved by him or under his authority.

6. We hereby undertake for the Emperor the Japanese government, and their successors to carry out the provisions of the Potsdam Declaration in good faith, and to issue whatever orders and take whatever action may be required by the Supreme Commander for the Allied Powers or by any other designated representative of the Allied Powers for the purpose of giving effect to that declaration.

7. We hereby command the Japanese imperial government and the Japanese imperial general headquarters at once to liberate all Allied prisoners of war and civilian internees now under Japanese control and to provide for their protection, care, maintenance, and immediate transportation to places as directed.

8. The authority of the Emperor and the Japanese government to rule the state shall be subject to the Supreme Commander for the Allied Powers who will take such steps as he deems proper to effectuate these terms of surrender.

The Surrender of Germany

Germany surrendered unconditionally to the Western Allies and the Soviet Union at a ceremony in a schoolhouse in Reims, France, at 2:41 A. M., French Time (8:41 P. M., E. W. T., May 6), May 7, 1945. This act brought the European war to a close, five years, eight months and six days after the Nazis started their invasions.

Following is the text of "An Act of Military Surrender."

"1. We, the undersigned, acting by authority of the German High Command, hereby surrender unconditionally to the Supreme Commander, Allied Expeditionary Force, and simultaneously to the Soviet High Command, all forces on land, sea, and in the air who are at this date under German control.

"2. The German High Command will at once issue orders to all German military, naval and air authorities and to all forces under German control to cease active operations at 2301 hours (11:01) Central European Time on Eight May and to remain in the positions occupied at the time. No ship, vessel or aircraft is to be scuttled, or any damage done to their hull, machinery, or equipment.

"3. The German High Command will at once issue to the appropriate commanders, and ensure the carrying out of any fur-

ther orders issued by the Supreme Commander, Allied Expeditionary Force, and by the Soviet High Command.

"4. This Act of Military Surrender is without prejudice to, and will be superseded by, any general instrument of surrender imposed, or on behalf of the United Nations and applicable to Germany and the German Armed Forces as a whole.

"In the event of the German High Command or any of the forces under their control failing to act in accordance with this Act of Surrender, the Supreme Commander, Allied Expeditionary Force, and the Soviet High Command will take such punitive or other action as they deem appropriate.

"Signed at Reims, France, at 0241 hours (2:41 A. M.), on the Seventh day of May, 1945.

"On behalf of the German High Command—Jodl.

"In the presence of:

"On behalf of the Supreme Commander, Allied Expeditionary Force—W. B. Smith.

"On behalf of the Soviet High Command—Ivan Susloparoff.

"On behalf of the French—F. Sevez."

The surrender terms were ratified in Berlin on May 8, 1945, and the war officially ended at 12:01 A. M., May 9, 1945.

UNITED STATES SERVICE ACADEMIES

THE UNITED STATES MILITARY ACADEMY

Source: U. S. Military Academy.

The U. S. Military Academy opened on July 4, 1802, with less than a dozen cadets, but it was not until 1812, when 250 cadets were appointed, that it began its regular curriculum.

The present Academy, with its various buildings, covers about $5\frac{1}{2}$ square miles.

The 2,500 cadets include:

- 4 from each congressional district
- 8 from each state at large
- 4 each from Hawaii and Alaska
- 6 from the District of Columbia
- 4 natives from Puerto Rico
- 2 from Panama Canal Zone
- 3 recommended by the Vice President
- 10 graduates of "honor military schools"
- 10 sons of veterans who died in line of duty
- 10 from Regular Army and Natl. Guard
- 4 Filipino cadets

The President makes the appointments upon recommendation by representatives, senators, delegates in Congress, commissioners of the District of Columbia, resident commissioners, Governor of the Canal Zone, heads of schools, commanding generals, or by his own choice, based upon competitive examinations.

Candidates must be between the ages of 17 and 22, unmarried, and able to pass the physical requirements. They may satisfy the educational requirements by taking entrance examinations, by presenting any acceptable secondary school certificates and taking special examinations in English and mathematics, or by presenting a sufficient number of college course certificates.

A cadet receives \$780 for each of his four years. Upon graduation with a degree of Bachelor of Science, he is commissioned a second lieutenant and must serve for at least four years. He may not marry for one year after graduation.

THE UNITED STATES NAVAL ACADEMY

Source: U. S. Navy

On October 10, 1845, the Naval School was established at Fort Severn, Annapolis, Maryland. Five years later it was renamed the United States Naval Academy, and the following year a regular four-year course was adopted. At present, the course includes seamanship, engineering, marine warfare, navigation, aviation, international law, and languages, in addition to general studies.

Candidates are selected as follows:

- 10 from the District of Columbia
- 10 sons of men and women killed in active service

25 sons of officers and enlisted men in the regular Army, Navy, or Marine Corps

100 enlisted Navy and Marine personnel selected by competitive examination

100 chosen by the Secretary of the Navy from the Naval and Marine Corps Reserves

5 Puerto Ricans chosen by the Resident Commissioner of Puerto Rico

4 Filipinos chosen by the President of the Philippines

1 from the Canal Zone

20 from schools designated by the Army and Navy as honor schools

20 from the American republics

Each senator, representative, delegate to Congress, and the Vice President names 5 candidates annually. The President selects the 5 from the District of Columbia, the 40 sons of men and women killed in active service and the 25 sons of officers and enlisted men in the regular Army, Navy or Marine Corps.

Candidates for admission must be between 17 and 21 years of age on April 1 of their entering year. They may qualify by taking entrance examination, by presenting any acceptable secondary school certificates and taking special examinations in English and mathematics, or by completing a sufficient number of acceptable college courses. Candidates must also meet the physical requirements and promise to remain unmarried until graduation.

Candidates are paid \$780 a year as midshipmen. Upon graduation, candidates are granted Bachelor of Science degrees and are commissioned as ensigns in the Navy or second lieutenants in the Marine Corps.

THE UNITED STATES COAST GUARD ACADEMY

Source: Our Coast Guard Academy, Riley Hughes.

On July 31, 1876, the Coast Guard Academy, then known as the Revenue Cutter Service, was established by law. In 1914, the school was named the Revenue Cutter Academy. The following year, when the Revenue Cutter Service was merged with the Life Saving Service to form the Coast Guard, the present name of Coast Guard Academy was established. In 1932, the Coast Guard Academy was moved from Fort Trumbull to another site in New London, where it has remained to this day.

The Academy is accredited by the Association of American Universities and grants the degree of Bachelor of Science in Marine Engineering to each graduate. The curriculum includes mathematics, physics, marine engineering, seamanship,

navigation, compass correction, naval architecture, and other engineering courses.

Candidates for admission must be between 17 and 22 years of age, physically sound, unmarried, and at least 5 feet 6 inches high. They must agree to remain unmarried until graduation and to serve at least three years after graduation. Cadets are paid \$780 a year and are commissioned as ensigns in the Coast Guard upon graduation.

THE UNITED STATES MERCHANT MARINE CADET CORPS

Source: War Shipping Administration.

The United States Merchant Marine Cadet Corps was established on March 15, 1938. Appointments are made on the basis of competitive examinations and a physical examination. Successful candidates, appointed as cadet-midshipmen in the United States Naval Reserve, are assigned to the Cadet School at Pass Christian, Mississippi, or at San Mateo, California, as Fourth Classmen. They may choose courses to become either deck or engineer officers. Upon completion of a plebe year, they are as-

signed to merchant ships as Third Classmen for practical training and 5 hours a day of academic work.

The last two years of the course are spent as Second and First Classmen at the United States Merchant Marine Academy at Kings Point, Long Island, New York. The course of study includes marine engineering, navigation, electricity, ship construction, naval science and tactics, economics, business language, history, and other cultural subjects.

A candidate must be an unmarried citizen between the ages of 16½ and 21. In the cases of veterans a waiver of three years is allowed on the maximum age. He must have 15 high-school credits, including 1 unit in algebra, 1 in plane geometry, 1 in science, and 3 in English.

A candidate is paid \$780 each year by the government except for his Third Class year, when the shipping company pays him. Graduates of the cadet corps receive a license as a deck or engineer officer in the Merchant Marine, a commission as ensign in the United States Naval Reserve, and the rank of ensign in the United States Maritime Service.

The American Red Cross

The American National Red Cross was organized in 1881 by its founder and first president, Clara Barton. In accordance with the Treaty of Geneva, which the United States signed in 1882, it was reincorporated under government supervision on January 5, 1905, by act of Congress. The President of the United States is president, ex-officio, of the American Red Cross. The present chairman is Basil O'Connor, who is also chairman of the Board of Governors of the League of Red Cross Societies. National headquarters are at 17th and D Streets, N. W., Washington, D. C. Total membership is approximately 36 million adults and 20 million children.

The primary function of the American Red Cross is to provide volunteer aid for

the sick and wounded in peace or war; to serve as an emergency communication link between the people of the United States and its armed forces; and to provide relief in national and international calamities. Foreign civilian war relief, furnished by and through the American Red Cross, totaled approximately 165 million dollars. The Blood Donor service procured 13,326,242 pints of blood. The organization trained over 1,400,000 persons in first aid during the war years. Over 35 million articles were made and distributed to servicemen by children of the Junior Red Cross. Since cessation of hostilities, the American Red Cross has not only reverted to its peacetime activities but has continued to maintain numerous services carried over from wartime functions.

United Service Organization, Inc.

The USO was chartered February 4, 1941, by the Young Men's Christian Associations, the National Catholic Community Service, the Salvation Army, the Young Women's Christian Associations, the National Jewish Welfare Board, and the National Travelers Aid Association. Recreation and canteen services were confined to the United States and to noncombat zones in the war theaters. USO-Camp Shows, however, the sole agency to take professional theatrical talent from the United States to troops overseas, served in

the several war theaters. Activities reached a peak in March 1944, when expenditure reached \$5,800,000 a month with approximately 730,000 volunteers engaged in activities relating to entertainment of servicemen at home and abroad. At the request of General Omar N. Bradley, USO-Camp Shows on March 1, 1946, continued to provide entertainment to servicemen in Veterans Administration hospitals.

National headquarters are in the Empire State Building, New York 1, New York.

THE UNITED NATIONS

by HAROLD E. STASSEN

Assistant Chief of Staff to Admiral William F. Halsey in the Pacific. Three-term governor of Minnesota and chairman National Governors' conference, 1940-41. Delegate in 1945 to the San Francisco Conference at which the United Nations Charter was drafted.

THE FIRST YEAR of the United Nations as a postwar continuing organization is marked by two major over-all factors. The first was numerous manifestations of the No. 1 postwar question—the relations between Russia and the United States and Great Britain. In instance after instance in the functioning of the fledgling organization, and in the peace conferences, the differences in viewpoint and ideologies and aspirations were reflected in deadlocked conferences, vetoed decisions, sharp words, and uncertainty.

The second major factor was the rapid establishment of the various machineries of the United Nations itself with the beginning of definite functioning of the Security Council, the Assembly, the Social and Economic Council, the World Court, the Atomic Energy Commission, and a dozen lesser bodies and boards. But this speed of development occurred against a background of even more rapid movement in world events and amazing advances in science, which caused the widespread question as the year drew to a close whether not the United Nations, with all their commendable speed of organization were moving fast enough.

It was too early to form any fixed opinion either of deep pessimism or wild optimism. There was widespread recognition that the United Nations did represent the best hope of a lasting and just peace as the year closed on the turbulent and uneasy world situation not unexpected in the wake of the tragic and tremendously destructive World War II.

It was also a fact that there was an increasing recognition by all nations of the importance of the forum which the United Nations bodies provided. The members tested for favorable world public opinion and showed respect for the moral authority of the world brought to bear through the early sessions of the United Nations.

The General Assembly

After three years of preparatory work, the United Nations came into being on January 10, 1946, when the General Assembly met in London, with delegates from fifty-one nations attending. The principal business of this first meeting was to complete the organization of the Security Council. The five permanent members of the Council already had been selected—China, France, the Union of Soviet Socialist Republics, the United Kingdom and the United States. They had been specified in the United Nations charter when it was drawn up at the San Francisco Conference in the Spring of 1945. To complete the Council, six non-permanent members were to be elected for one-year and two-year terms by the General Assembly. The nations chosen were Australia, Brazil, Egypt, Mexico, the Netherlands and Poland.

The General Assembly, in which each nation has one vote, has been called the "Town Meeting of the World." Here the world's troubles are to be talked over. After the discussion the Assembly may tell any nation, or the Security Council, what it thinks should be done to improve matters. The Assembly must confine itself, however, to suggesting peaceful ways of ironing things out; it may not recommend methods of force. The Assembly may talk about anything it pleases (providing the matter is not at the moment in the hands of the Council), but it has no power to take action against any nation, nor may it enact any laws. It must rely on the force of world opinion to make its influence felt.

The Assembly decides what share each nation pays toward the costs of the United Nations. It is to meet once a year; the first annual meeting (not counting the earlier organization meeting) began at the headquarters of the United Nations at Lake Success, L. I., on October 23, 1946.

The Security Council

The Security Council does not have any parallel in the mechanisms of government with which we are familiar on local and national levels. In some respects, it can function somewhat like a grand jury in investigating, in hearing the parties to disputes, and in making findings or recommendations. It can also act somewhat as an umpire between two disputing nations and seek to bring out the facts and mediate the differences. It is also the nearest approach to a community sheriff on a world level as it has certain responsibilities and powers of enforcement to prevent the outbreak of war.

The procedure set up as to any dispute or situation, the existence of which is a threat to world peace, is as follows: The parties to the dispute are first required to endeavor to settle the dispute between themselves. If they fail to do so, either one of them or any member or the Secretary General himself may bring the dispute before the Security Council. The Security Council may investigate and may mediate and may act as an umpire. It may also make a specific finding and recommendation for settlement, which, in effect, is a judgment upon the facts. If the parties do not accept this settlement or if in other respects world peace is threatened, enforcement action may be taken in the nature of economic sanctions—(penalties) against an offending country, which may take the form of cutting it off from all commerce and travel and trade and communication with the rest of the world.

As a final step to prevent or suppress war, the Security Council may send into action armed forces by land, sea or air. The Charter contemplates that each of the members should place an agreed part of its armed forces and facilities at the Council's disposal for this purpose as a United Nations police force.

The Charter also provides for a military staff committee for this purpose. This military staff committee met in London on February 4, 1946, and again in New York the following month, but at the time this was written the definite forces had not been agreed upon or allocated.

The weakness in this entire procedure was of course the voting provision which is commonly referred to as the veto power.

The Veto Power

The voting provision in the Security Council is of such basic importance that it is worth giving a brief recital of its background and of its functioning.

At the Dumbarton Oaks Conference it was impossible to reach agreement between Russia and Great Britain and the United States on the voting provision. It

appears that at that time there was concern both in this country, particularly in the U. S. Senate, and in Russia, that one or the other, or both of these major powers, which were entering into full world responsibilities for the first time, might find themselves in the minority and outvoted in the vital decisions of the Security Council for the maintenance of the peace. Consequently, the Dumbarton Oaks Conference closed without a voting provision and the tentative recommendation were presented to the nations of the world without a voting provision in the Security Council. The voting provision as it now stands in the Charter was brought to the Yalta Conference by President Roosevelt and the Secretary of State of the United States and there approved by Marshal Stalin and by Winston Churchill. It was not then interpreted in any written document.

At the San Francisco Conference the smaller nations made repeated efforts to change this voting provision, but the major powers would not yield and the final question was one of interpretation of the language. Russia sought a very rigid interpretation, including even the power to veto the discussion and consideration of a dispute before the Security Council. But the United States and other members insisted that there at least be an interpretation that the Security Council, without veto, could go through the first peaceful steps of taking up a dispute, discussing it, considering it, and recommending a settlement. This interpretation finally prevailed. Russia yielded after a personal conference by Harry Hopkins with Marshal Stalin at Moscow.

It was also agreed, as the terms of the voting arrangement provide, that a party to a dispute must refrain from voting, and hence cannot veto, during any of the peaceful steps of the consideration of a dispute.

The voting provision is referred to as emphasizing the need and importance of unanimity among the Big Five if there is to be world peace. The theory has sound aspects if, and only if, there is a genuine effort on the part of each of the Big Five to reach a fair agreement.

Its clear effect, of course, is that the Security Council itself can bring no more than the moral force of world opinion to bear against anyone of the Big Five because of this veto provision.

It is important to note, however, that if through the use of a veto the Security Council cannot act, the members of the United Nations are not thereby released under the terms of the Charter from their obligations to refrain from aggression, to use force to keep the peace, and to deal justly with their fellow members. Thus the burden of reaching peaceful

agreements, regardless of the voting arrangement or the use of the veto, tends to divert attention to the outward indications of the failure to agree, when the real problem is the fundamental need for reaching agreement.

It is also important to note that there is no veto provision in the General Assembly, or in the Social and Economic Council, or in the World Court, or in the Trusteeship Council.

Work for the Council

The first meeting of the Security Council opened in London on January 17, 1946, a week after the Assembly. The Big Five hoped this would be a quiet meeting devoted to organizing. It was not. Differences of viewpoint between Russia and her war partners immediately cropped up.

The first complaint to the Council came from Russia's small southern neighbor, Iran (formerly known as Persia). Iran said Russian occupation troops were not being withdrawn as promised, and that Russia was exerting undue political pressure, particularly over Iran's northern province, Azerbaijan, which adjoins the U. S. S. R.

When Iran made this appeal to the Council, Russia apparently thought it had been inspired by England. Even before World War I England and Russia had vied for control of Persia. To Moscow it perhaps looked as though the age-old rivalry was being renewed through the new United Nations. Russia made a diplomatic counterattack, bringing charges against England before the Council. England was accused of disturbing world peace by keeping her troops in Greece and in Iraq (which was revolting against the Netherlands).

The Security Council found no cause for action against England on the score of British troops being in Greece or in Iraq. The Council kept the question of Iran on the agenda; that is, it kept its eye on the situation and asked for reports as to whether Russia was abiding its promise to withdraw occupation troops. Russia insisted that this was none of the Council's business; Moscow was so annoyed that the Soviet delegate, Andrei Gromyko, walked out of the Security Council sessions that dealt with Iran. The Council continued to do business with Russia's seat temporarily vacant.

Iran had first appealed to the Security Council against Russian "interference" on January 19, 1946, when the Council was meeting in London. The Council moved to New York and the matter still hung fire; finally in early May Iran said Soviet occupation troops had left. In the meantime Russia had received by process of negotiation concessions in Northern Iran. And

the province of Azerbaijan, which had been in dispute, had received a degree of autonomy.

The next topic which came before the Security Council was that of Spain. Russia contended that the regime of Generalissimo Francisco Franco constituted an immediate threat to world peace because he was a pro-Axis dictator. Russia said the Council should take steps to correct the situation—at least by breaking off diplomatic relations and perhaps economic relations, too. England and the United States publicly avowed dislike for Franco, but were apparently reluctant to take any international action against his regime. They said that the Charter forbids the United Nations to interfere with the internal affairs of a country. Moreover, they indicated that outside action against Franco might precipitate civil war in Spain.

It was in connection with the Spanish topic that Soviet Russia brought into the spotlight the problem of the Big Five veto power. Three times on the afternoon of June 26, 1946, Russia employed the veto.

The issue was this: All the Security Council members wanted to keep Spain on the agenda. Most members also wanted to give the General Assembly specific permission to discuss what to do about the Franco regime. (Ordinarily the Assembly is barred from discussing a matter while the Council is dealing with it). But Russia and her unwavering ally, Poland, did not want to let the Assembly take a hand; they wanted immediate Council action.

So Russia exercised the veto twice in that connection. Australia then said Russia had no right to use the veto on the pending motion because the question was a procedural one, that is, it concerned only the manner in which the Council would take up the main subject, and did not involve a decision of the issue on the merits. The Council took a vote and the majority agreed with Australia. But Russia again asserted a veto.

The International Court

The third coordinate branch of the United Nations structure, standing by the side of the Security Council and the General Assembly, is the International Court of Justice. Fifteen eminent judges—no two from the same country—make up the Court; they are elected by the Council and the Assembly.

The Court first met at The Hague on April 3, 1946, to organize. England announced that she was willing to submit, as a first case, a boundary dispute which has gone on for many years between British Honduras and Guatemala.

In addition to boundary disputes, the Court is designed to settle arguments about the correct interpretation of treaties; ques-

tions of whether a nation has violated a treaty, and if so, whether damages should be paid; and other questions of international law.

Some nations already have agreed that they will submit all legal disputes to the Court and abide by its decisions. In other words, they have accepted "compulsory jurisdiction." On August 2, 1946, the Senate voted that the United States accept compulsory jurisdiction, with the reservation that domestic matters, as judged by itself, are not to go before the Court.

The International Court may receive disputes either from individual nations or from the Security Council. If a nation which has agreed to the Court's jurisdiction refuses to abide by the verdict, then it is the responsibility of the Security Council to enforce obedience.

The Economic and Social Council

The Economic and Social Council is a semi-independent body under the supervision of the General Assembly. Its basic purpose is to remove the underlying causes of war by correcting the injustices which beset so many people in this world and make them discontented. The task is enormous.

More specifically, the Economic and Social Council is instructed by the Charter to promote: higher standards of living throughout the world; better health conditions; observance of human rights and freedoms; full employment. Eighteen nations are members, and they are normally elected for three-year terms by the General Assembly.

In a sense the Economic and Social Council may be called the trouble shooter for the United Nations in nonpolitical fields. It is to make studies of what ails this world, and then recommend what might be done. It may call international conferences and may suggest treaties on economic or social matters. Its recommendations may be made to the General Assembly, or to individual nations, or to the world agencies which were established before the United Nations structure was completed.

The first meeting of the Economic and Social Council was held in London from January 25 to February 18, 1946. The next meeting opened in New York on May 25th. Nine commissions were established in the course of the year to deal with various phases of the Council's work. They were:

- Commission on Human Rights, of which Mrs. Franklin D. Roosevelt was first chairman.
- Commission on Narcotic Drugs.
- Commission on Transport and Communications.

- Economic and Employment Commission.
- Statistical Commission.
- Fiscal Commission.
- Social Commission.
- Commission on the Status of Women.
- Commission on Freedom of Information and the Press.

The Atomic Energy Commission

Nothing is said in the United Nations Charter about controlling the atomic bomb, but there are provisions for disarmament, for regulation of armaments, and for establishment of special commissions.

After the bombs had exploded over Hiroshima and Nagasaki and Japan had surrendered, the three nations which possessed the secret—the United States, England and Canada—proposed on November 15, 1945 that the United Nations set up a separate commission to control atomic energy. In due course such a commission was established by the General Assembly and was put under the authority of the Security Council. Nations on the Council were made members of the atomic commission, with the addition of Canada.

Man's combined effort to save himself from the annihilating power of the atom began on June 14, 1946, at the first meeting of the United Nations Atomic Energy Commission in New York. Bernard M. Baruch, the United States member, presented this country's plan for outlawing the atom as an instrument for destroying civilization and for developing it, instead, as a benefit to mankind. "We are here to make a choice between the quick and the dead," said Mr. Baruch.

Nearly all the other nations of the commission favored the American proposal as a basis for working out an international agreement. Russia suggested a markedly different plan for atomic control. Since this became a topic of the most urgent discussion during the latter part of 1946, it is worth noting the main differences between the American approach and that of Soviet Russia.

In brief, the American plan was this:

1. Set up an International Atomic Development Authority, composed of leading scientists of various nations. This I. A. D. A. would control all deposits, anywhere in the world, of uranium and thorium, which are the mineral sources of atomic energy. It would control the plants making fissionable material. It would distribute the material to manufacturers and laboratories wanting to use it for peaceful purposes such as power development or medical research.
2. The I. A. D. A. would send its inspectors into every nation of the world to make sure nobody was using atomic energy for warlike ends.

3. The United Nations would administer swift and drastic punishment in case any nation attempted to make bombs. No nation would have the right to veto such punishment.

4. After the international control machinery was set up and working well, the United States would dispose of its supply of bombs and reveal its secrets to the A. D. A.

The Soviet proposals contemplated a different order of events. Instead of creating world authority to control the basic materials of atomic energy, the Russian plan would:

1. Leave it up to each individual nation to develop its own atomic energy; and sign treaty outlawing atomic weapons.

2. Require existing atomic weapons (meaning those in the United States) to be destroyed within three months after ratification of the treaty outlawing them.

Thus as the discussions began, Russia proposed the three basic principles which the United States suggested: (a) International control; (b) International inspection; and (c) Abolition of the big-nation to power. Nevertheless, the United Nations Atomic Energy Commission went to work in the hope of reconciling the American and Soviet views and devising an acceptable system of atomic control.

Trusteeship Council

Under the League of Nations there existed a system of mandates by which strong powers administered colonial areas. To replace the mandate plan the United Nations set up a trusteeship system. Former League mandates may be put under trusteeship; also Axis lands taken over in the recent war; and any other dependent territories which the controlling countries wish to place under trusteeship.

No nation is obliged to put a colony or dependency under trusteeship. If it does it is saying in effect: "We want the United Nations to share our responsibility seeing that this dependent land is governed well, and in accordance with the principles set forth in the Charter." The goals of the trusteeship system are high: to promote the political, social and educational advancement of the dependent people and to help them develop the ability to govern themselves.

The Charter provides for establishing a Trusteeship Council, to be made up of five United Nations members which administer dependent territories, plus an equal number of countries which do not. The Council is authorized to receive reports from administering nations; to hear petitions from dependent territories, and to inspect them.

There was delay in getting a Trusteeship

Council set up. England was the first to say she would make use of the trusteeship system when it began to function. She was willing to put her parts of the Cameroons and Togoland—former German colonies in Africa—under trusteeship.

While trusteeships are usually under the General Assembly's supervision, a second type was provided in the Charter. In the case of "strategic areas"—that is key spots for defense—the nation controlling them can designate them as such and be answerable to the Security Council for their administration only to the extent provided in the original trusteeship agreements which may protect the security interests of the administering nation.

The Secretariat

The first Secretary-General of the United Nations was Trygve Lie (pronounced as though spelled Trigva Lee), who used to be Norway's Foreign Minister. As chief administrative officer of the organization he headed a permanent staff of people looking after the million details involved in operating so complex a structure.

One of the things that made life complicated for the secretariat in the first year was the lack of a real home for the United Nations. The General Assembly voted in the spring of 1946 to build permanent headquarters in the eastern part of the United States. Various sites were examined in an area near New York City embracing parts of Westchester County, New York, and Fairfield County, Connecticut.

Meanwhile, the Security Council used a building belonging to Hunter College in New York City as its first temporary home. Then it moved downtown to the Henry Hudson Hotel. And in August it moved out to Lake Success, in Nassau County on Long Island, where it hopes to stay several years until a permanent home for the United Nations can be constructed. The General Assembly held its annual meeting, beginning October 23rd, at Flushing Meadow in the Queens section of New York City.

Specialized Agencies

In the orbit of the United Nations, somewhat like satellites around a planet, are a group of independent world organizations. The Economic and Social Council is empowered to keep an eye on them and advise them, but actually they pretty much run their own affairs. Several of these "specialized agencies," as they are called, were founded before the United Nations Charter was drawn up; and one of them has admitted to membership countries that do not belong to the United Nations.

Following is a brief description of the specialized agencies:

U. N. R. R. A.

The United Nations Relief and Rehabilitation Administration was established in November, 1943, with forty-four nations participating; four other nations joined later. The first director was Herbert H. Lehman, and the second was Fiorello H. La Guardia. The purpose of the U. N. R. R. A. was to care for victims of the war by supplying food, clothing, coal, farm equipment; and to provide shelter for refugees. U. N. R. R. A. worked in thirty-nine countries, distributed about 14,000,000 tons of food and goods; spent nearly \$4,000,000,000. It was scheduled to end operations in Europe at the end of 1946, and in the Far East by April, 1947.

F. A. O.

The International Food and Agriculture Organization grew out of the war food conference held in Hot Springs, West Virginia, in May, 1943. It came into being in November, 1945, with thirty nations participating. Its purpose is long-range, as contrasted with the war emergency work of U. N. R. R. A. The F. A. O. hopes to make the people of the world eat better, over the course of years, by increasing the sum total of food crops and improving the distribution of food so that some people will not starve while others have more crops than they can sell.

World Bank and Fund

These two financial organizations—the International Bank for Reconstruction and Development; and the International Monetary Fund—were planned at a conference in Bretton Woods, New Hampshire, in July, 1944. They came into being at Savannah, Georgia, in March, 1946. Eugene Meyer, of Washington, D. C., a banker and newspaper publisher, was chosen first president of the bank.

The purpose of the International Bank is to help war-stricken nations to get back on their feet economically by lending them money; also, to help build up undeveloped countries. Each participating nation subscribes to a share of the bank's capital, in proportion to its own wealth; the United States pledged the biggest subscription.

The purpose of the Monetary Fund is to help governments keep the value of their currencies stable; that is, to keep the franc, for example, from fluctuating wildly in terms of the dollar. When currencies are rubberlike, international trade tends to dry up because merchants do not know what they can depend on.

U. N. E. S. C. O.

The United Nations Educational, Scientific, and Cultural Organization was provided for by the Charter; the first steps

toward establishing it were taken in June 1945, in Paris. It is designed to give the savants of the world an opportunity to exchange ideas and to promote mutual understanding through cooperation in the fields mentioned in the title.

W. H. O.

The World Health Organization was promulgated in July 1946, in New York City. Representatives of sixty-three nations (including twelve not members of the United Nations) signed the constitution. Italy and Austria were among the signers, participating in such a conference for the first time since the war. The purpose of the organization, as stated by the chief United States delegate, Surgeon General Thomas Parran, is to "help eliminate the ancient human plagues, such as malaria, cholera, tuberculosis and syphilis."

C. A. O.

The Civil Aviation Organization was formed in 1944 to deal with the world-wide problems of peacetime commercial aviation. Its purpose is to see that air rules are formulated and observed, and to facilitate navigation.

Labor Organizations

Although they have no direct connection with the United Nations, two labor organizations should be mentioned:

The International Labor Organization (I. L. O.) was formed under the League of Nations and has been functioning a quarter of a century. It is made up of representatives of employers, workers' governments. Its purpose is to improve working agreements by encouraging international agreements as to conditions, hours and pay. The American Federation of Labor participates in the I. L. O. Soviet Russia does not.

The World Federation of Trade Unions (W. F. T. U.) was founded in Paris in October, 1945. It is composed solely of labor union representatives, and it claims to represent 66,000,000 workers. Of these, number 27,000,000 are in Russia. The American Congress of Industrial Organizations is affiliated with the W. F. T. U.

Beginnings of the United Nations

On January 1, 1942, twenty-six nations signed in Washington, D. C., a declaration pledging themselves to fight the war to their utmost and to make no separate peace. The name "United Nations" not mentioned in the declaration, but signatory countries soon came to be called that.

The first official statement of the intention to form a postwar world organization came at a meeting of Foreign Ministers

Moscow in October, 1943. Russia, England, China and the United States signed the Moscow pact, Article 4 of which read: "That they recognize the necessity of establishing at the earliest practicable date a general international organization based on the principle of the sovereign equality of all peace-loving states, and open to membership by all such states, large and small, for the maintenance of international peace and security."

From August 21 to October 7, 1944, representatives of the United States, England, Russia and China, met at Dumbarton Oaks, an estate in Washington, D. C., and drew up a set of proposals for the postwar United Nations Organization. They were submitted to the other nations for study.

In February, 1945, President Roosevelt, Prime Minister Churchill and Marshal Stalin met at Yalta, in the Crimea. There they agreed upon the voting arrangement in the Security Council, including the veto provision.

The United Nations Charter was drawn up, on the basis of the Dumbarton Oaks proposals, at the San Francisco Conference of fifty nations from April 25 to June 25, 1945.

The United States Senate ratified the Charter on July 28 by a vote of 89 to 2. On October 24, 1945, the United Nations came formally into existence when Soviet Russia became the twenty-ninth nation to ratify the Charter. Subsequently all fifty of the original signers ratified.

The League of Nations

The Covenant of the League of Nations was drawn up at the Versailles Peace Conference of 1919 and was incorporated into the peace treaty. On November 19, 1919, the United States Senate rejected membership in the League by a vote of 49 to 35.

The Council of the League met first in Paris on January 16, 1920. The permanent members were England, France, Italy and Japan; and there were four nonpermanent members. Germany was made a permanent member when she was admitted in 1926. Russia was made a permanent member when she was admitted in 1934. Non-permanent members of the Council were increased to nine in 1926.

The Assembly of the League met first on November 15, 1921, with forty-one nations participating. Headquarters were established in Geneva, Switzerland, where the elaborate, 700-room Palace of the League of Nations was completed in 1936. The Permanent Court of International Justice

(World Court) was established on January 30, 1922, at The Hague.

The heart of the League Covenant was Article X, which bound all member nations to "respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League." Article XVI said that if any League member resorted to war, all other members were to stop all commerce with it. This became known as the application of economic sanctions.

The League itself governed the Saar region on the Franco-German border until March 1, 1935, when it was turned over to Germany after the Saar residents so voted in a plebiscite. The League governed the Free City of Danzig until the Germans conquered it in 1939.

The first dispute presented to the League was a complaint by Persia (now known as Iran) on May 19, 1920, that her northernmost province had been invaded by Soviet Russia. Russia withdrew her troops. The League successfully settled numerous minor disputes—Finland vs. Sweden; Poland vs. Lithuania, etc. Italy defied the League in 1923 by seizing the Greek island of Corfu. Mussolini refused to withdraw troops until Greece had complied with his drastic punitive demands.

The next major defiance of the League was in 1931 when Japan invaded Manchuria. The League verbally condemned Japan two years later, but took no action. Japan withdrew from the League in 1935.

On October 3, 1935, Italy invaded Ethiopia; both nations were League members. For the first and only time the League put into effect the economic sanctions mentioned in Article XVI—but not all of them. One vital war material—oil—still was sold to Italy. After conquering Ethiopia, Italy withdrew from the League in 1937.

In 1936 Germany broke the Versailles Treaty by rearming and by remilitarizing the Rhineland. The League did nothing to check Germany, and Hitler took his country out of the League. The League was equally ineffective in preventing German and Italian intervention in behalf of General Franco's rebellion in Spain.

The only nation to be expelled from the League of Nations was Russia. That happened in December, 1939, because of Russia's war against Finland.

No meetings of the League of Nations were held after World War II began in 1939 until the final session of the Assembly at Geneva in April 1946. That session dissolved the organization.

Genocide: Cuba, India and Panama referred a proposal to the United Nations General Assembly, to outlaw genocide, defined as those instances "when national, racial, ethnical or religious groups have been destroyed, entirely or in part, as government policy."

CHARTER OF THE UNITED NATIONS

WE, the peoples of the United Nations Determined to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind, and

To reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small, and

To establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained, and

To promote social progress and better standards of life in larger freedom, and for these ends

To practice tolerance and live together in peace with one another as good neighbors, and

To unite our strength to maintain international peace and security, and

To insure, by the acceptance of principles and the institution of methods, that armed force shall not be used, save in the common interest, and

To employ international machinery for the promotion of the economic and social advancement of all peoples, have resolved to combine our efforts to accomplish these aims.

Accordingly, our respective governments, through representatives assembled in the city of San Francisco, who have exhibited their full powers found to be in good and due form, have agreed to the present Charter of the United Nations and do hereby establish an international organization to be known as the United Nations.

CHAPTER I

Purposes and Principles

Article 1

The purposes of the United Nations are:

1. To maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace;

2. To develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, and to take other appropriate measures to strengthen universal peace;

3. To achieve international cooperation in solving international problems of an economic, social, cultural or humanitarian

character, and in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language or religion; and

4. To be a center for harmonizing the actions of nations in the attainment of these common ends.

Article 2

The organization and its members, in pursuit of the purposes stated in Article 1, shall act in accordance with the following principles:

1. The organization is based on the principle of the sovereign equality of all its members.

2. All members, in order to ensure to all of them the rights and benefits resulting from membership, shall fulfill in good faith the obligations assumed by them in accordance with the present Charter.

3. All members shall settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered.

4. All members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the purposes of the United Nations.

5. All members shall give the United Nations every assistance in any action it takes in accordance with the present Charter, and shall refrain from giving assistance to any state against which the United Nations is taking preventive or enforcement action.

6. The organization shall ensure that states not members of the United Nations act in accordance with these principles so far as may be necessary for the maintenance of international peace and security.

7. Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state or shall require the members to submit such matters to settlement under the present Charter; but this principle shall not prejudice the application of enforcement measures under Chapter VII.

CHAPTER II

Membership

Article 3

The original members of the United Nations shall be the states which, having participated in the United Nations Conference on International Organization at San Francisco, or have previously sign-

the Declaration by United Nations of Jan. 1, 1942, sign the present Charter and ratify it in accordance with Article 110.

Article 4

1. Membership in the United Nations is open to all other peace-loving states which accept the obligations contained in the present Charter and, in the judgment of the organization, are able and willing to carry out these obligations.

2. The admission of any such state to membership in the United Nations will be effected by a decision of the General Assembly upon the recommendation of the Security Council.

Article 5

A member of the United Nations against which preventive or enforcement action has been taken by the Security Council may be suspended from the exercise of the rights and privileges of membership by the General Assembly upon the recommendation of the Security Council. The exercise of these rights and privileges may be restored by the Security Council.

Article 6

A member of the United Nations which has persistently violated the principles contained in the present Charter may be expelled from the organization by the General Assembly upon the recommendation of the Security Council.

CHAPTER III

Organs

Article 7

1. There are established as the principal organs of the United Nations: A General Assembly, a Security Council, an Economic and Social Council, a Trusteeship Council, an International Court of Justice and a Secretariat.

2. Such subsidiary organs as may be found necessary may be established in accordance with the present Charter.

Article 8

The United Nations shall place no restrictions on the eligibility of men and women to participate in any capacity and under conditions of equality in its principal and subsidiary organs.

CHAPTER IV

The General Assembly

Composition

Article 9

The General Assembly shall consist of all the members of the United Nations.

Each member shall not have more than five representatives in the General Assembly.

Functions and Powers

Article 10

The General Assembly may discuss any questions or any matters within the scope of the present Charter or relating to the powers and functions of any organs provided for in the present Charter, and, except as provided in Article 12, may make recommendations to the members of the United Nations or to the Security Council, or to both, on any such questions or matters.

Article 11

1. The General Assembly may consider the general principles of cooperation in the maintenance of international peace and security, including the principles governing disarmament and the regulation of armaments, and may make recommendations with regard to such principles to the members or to the Security Council or to both.

2. The General Assembly may discuss any questions relating to the maintenance of international peace and security brought before it by any member of the United Nations, or by the Security Council, or by a state, which is not a member of the United Nations, in accordance with Article 35, Paragraph 2, and, except as provided in Article 12, may make recommendations with regard to any such questions to the state or states concerned or to the Security Council, or both. Any such question on which action is necessary shall be referred to the Security Council by the General Assembly either before or after discussion.

3. The General Assembly may call the attention of the Security Council to situations which are likely to endanger international peace and security.

4. The powers of the General Assembly set forth in this Article shall not limit the general scope of Article 10.

Article 12

1. While the Security Council is exercising in respect of any dispute or situation the functions assigned to it in the present Charter, the General Assembly shall not make any recommendation with regard to that dispute or situation unless the Security Council so requests.

2. The Secretary-General, with the consent of the Security Council, shall notify the General Assembly at each session of any matters relative to the maintenance of international peace and security which are being dealt with by the Security Council and shall similarly notify the General Assembly, or the members of the United Na-

tions if the General Assembly is not in session, immediately the Security Council ceases to deal with such matters.

Article 13

1. The General Assembly shall initiate studies and make recommendations for the purpose of:

(a) Promoting international cooperation in the political field and encouraging the progressive development of international law and its codification;

(b) Promoting international cooperation in the economic, social, cultural, educational and health fields and assisting in the realization of human rights and fundamental freedoms for all without distinction as to race, sex, language or religion.

2. The further responsibilities, functions and powers of the General Assembly with respect to matters mentioned in Paragraph 1(b) above are set forth in Chapters IX and X.

Article 14

Subject to the provisions of Article 12, the General Assembly may recommend measures for the peaceful adjustment of any situation, regardless of origin, which it deems likely to impair the general welfare or friendly relations among nations, including situations resulting from a violation of the provisions of the present Charter setting forth the purposes and principles of the United Nations.

Article 15

1. The General Assembly shall receive and consider annual and special reports from the Security Council; these reports shall include an account of the measures that the Security Council has decided upon or taken to maintain international peace and security.

2. The General Assembly shall receive and consider reports from the other organs of the United Nations.

Article 16

The General Assembly shall perform such functions with respect to the international trusteeship system as are assigned to it under Chapters XII and XIII, including the approval of the trusteeship agreements for areas not designated as strategic.

Article 17

1. The General Assembly shall consider and approve the budget of the organization.

2. The expenses of the organization shall be borne by the members as apportioned by the General Assembly.

3. The General Assembly shall consider and approve any financial and budgetary arrangements with specialized agencies re-

ferred to in Article 57 and shall examine the administrative budgets of such specialized agencies with a view to making recommendations to the agencies concerned.

Voting

Article 18

1. Each member of the General Assembly shall have one vote.

2. Decisions of the General Assembly on important questions shall be made by a two-thirds majority of the members present and voting. These questions shall include: recommendations with respect to the maintenance of international peace and security, the election of the non-permanent members of the Security Council, and election of the members of the Economic and Social Council, the election of members of the Trusteeship Council in accordance with Paragraph 1(c) of Article 86, the admission of new members to the United Nations, the suspension of the rights and privileges of membership, the expulsion of members, questions relating to the operation of the trusteeship system and budgetary questions.

3. Decisions on other questions, including the determination of additional categories of questions to be decided by a two-thirds majority, shall be made by a majority of the members present and voting.

Article 19

A member of the United Nations who is in arrears in the payment of its financial contributions to the organization shall have no vote in the General Assembly if the amount of its arrears equals or exceeds the amount of the contributions due from it for the preceding two full years. The General Assembly may, nevertheless, permit such a member to vote if it is satisfied that the failure to pay is due to conditions beyond the control of the member.

Procedure

Article 20

The General Assembly shall meet regular annual sessions and in such special sessions as occasion may require. Special sessions shall be convoked by the Secretary-General at the request of the Security Council or of a majority of the members of the United Nations.

Article 21

The General Assembly shall adopt its own rules of procedure. It shall elect a president for each session.

Article 22

The General Assembly may establish such subsidiary organs as it deems necessary for the performance of its functions.

CHAPTER V

The Security Council**Composition****Article 23**

1. The Security Council shall consist of eleven members of the United Nations. The Republic of China, France, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, and the United States of America, shall be permanent members of the Security Council. The General Assembly shall elect six other members of the United Nations to be non-permanent members of the Security Council, due regard being specially paid, in the first instance to the contribution of members of the United Nations to the maintenance of international peace and security and to the other purposes of the organization, and also to equitable geographical distribution.

2. The non-permanent members of the Security Council shall be elected for a term of two years. In the first election of the non-permanent members, however, three shall be chosen for a term of one year. A retiring member shall not be eligible for immediate re-election.

3. Each member of the Security Council shall have one representative.

Functions and Powers**Article 24**

1. In order to insure prompt and effective action by the United Nations, its members confer on the Security Council primary responsibility for the maintenance of international peace and security, and agree that in carrying out its duties under this responsibility the Security Council acts on their behalf.

2. In discharging these duties the Security Council shall act in accordance with the purposes and principles of the United Nations. The specific powers granted to the Security Council for the discharge of these duties are laid down in Chapters VI, VII, VIII and XII.

3. The Security Council shall submit annual and, when necessary, special reports to the General Assembly for its consideration.

Article 25

The members of the United Nations agree to accept and carry out the decisions of the Security Council in accordance with the present Charter.

Article 26

In order to promote the establishment and maintenance of international peace and security with the least diversion for armaments of the world's human and eco-

nomic resources, the Security Council shall be responsible for formulating, with the assistance of the Military Staff Committee, referred to in Article 47, plans to be submitted to the members of the United Nations for the establishment of a system for the regulation of armaments.

Voting**Article 27**

1. Each member of the Security Council shall have one vote.

2. Decisions of the Security Council on procedural matters shall be made by an affirmative vote of seven members.

3. Decisions of the Security Council on all other matters shall be made by an affirmative vote of seven members including the concurring votes of the permanent members; provided that, in decisions under Chapter VI and under Paragraph 3 of Article 52 a party to a dispute shall abstain from voting.

Procedure**Article 28**

1. The Security Council shall be so organized as to be able to function continuously. Each member of the Security Council shall for this purpose be represented at all times at the seat of the organization.

2. The Security Council shall hold periodic meetings at which each of its members may, if it so desires, be represented by a member of the government or by some other specially designated representative.

3. The Security Council may hold meetings at such places other than the seat of the organization as in its judgment will best facilitate its work.

Article 29

The Security Council may establish such subsidiary organs as it deems necessary for the performance of its functions.

Article 30

The Security Council shall adopt its own rules of procedure, including the method of selecting its president.

Article 31

Any member of the United Nations which is not a member of the Security Council may participate, without vote, in the discussion of any question brought before the Security Council whenever the latter considers that the interests of that member are specially affected.

Article 32

Any member of the United Nations which is not a member of the Security Council or

any state which is not a member of the United Nations, if it is a party to a dispute under consideration by the Security Council, shall be invited to participate, without vote, in the discussion relating to the dispute. The Security Council shall lay down such conditions as it deems just for the participation of a state which is not a member of the United Nations.

CHAPTER VI

Pacific Settlement of Disputes

Article 33

1. The parties to any dispute, the continuance of which is likely to endanger the maintenance of international peace and security, shall, first of all, seek a solution by negotiation, inquiry, mediation, conciliation, arbitration, judicial settlement, resort to regional agencies or arrangements, or other peaceful means of their own choice.

2. The Security Council shall, when it deems necessary, call upon the parties to settle their dispute by such means.

Article 34

The Security Council may investigate any dispute, or any situation which might lead to international friction or give rise to a dispute, in order to determine whether the continuance of the dispute or situation is likely to endanger the maintenance of international peace and security.

Article 35

1. Any member of the United Nations may bring any dispute or any situation of the nature referred to in Article 34 to the attention of the Security Council or of the General Assembly.

2. A state which is not a member of the United Nations may bring to the attention of the Security Council or of the General Assembly any dispute to which it is a party if it accepts in advance, for the purposes of the dispute, the obligations of pacific settlement provided in the present Charter.

3. The proceedings of the General Assembly in respect of matters brought to its attention under this Article will be subject to the provisions of Articles 11 and 12.

Article 36

1. The Security Council may, at any stage of a dispute of the nature referred to in Article 33 or of a situation of like nature, recommend appropriate procedures or methods of adjustment.

2. The Security Council should take into consideration any procedures for the settlement of the dispute which have already been adopted by the parties.

3. In making recommendations under this Article the Security Council should also take into consideration that legal disputes should as a general rule be referred by the parties to the International Court of Justice in accordance with the provisions of the statute of the Court.

Article 37

1. Should the parties to a dispute of the nature referred to in Article 33 fail to settle it by the means indicated in that Article, they shall refer it to the Security Council.

2. If the Security Council deems that the continuance of the dispute is in fact likely to endanger the maintenance of international peace and security, it shall decide whether to take action under Article 36 or to recommend such terms of settlement as it may consider appropriate.

Article 38

Without prejudice to the provisions of Articles 33 to 37 the Security Council may, if all the parties to any dispute so request, make recommendations to the parties with a view to a pacific settlement of the dispute.

CHAPTER VII

Action with Respect to Threats to the Peace, Breaches of the Peace, and Acts of Aggression

Article 39

The Security Council shall determine the existence of any threat to the peace, breach of the peace, or act of aggression and shall make recommendations, or decide what measures shall be taken in accordance with Articles 41 and 42, to maintain or restore international peace and security.

Article 40

In order to prevent an aggravation of the situation, the Security Council may, before making the recommendations or deciding upon the measures provided for in Article 39, call upon the parties concerned to comply with such provisional measures as it deems necessary or desirable. Such provisional measures shall be without prejudice to the rights, claims, or position of the parties concerned. The Security Council shall duly take account of failure to comply with such provisional measures.

Article 41

The Security Council may decide what measures not involving the use of armed force are to be employed to give effect

to its decisions, and it may call upon members of the United Nations to apply such measures. These may include complete or partial interruption of economic relations and of rail, sea, air, postal, telegraphic, radio, and other means of communication, and the severance of diplomatic relations.

Article 42

Should the Security Council consider that measures provided for in Article 41 would be inadequate, or have proved to be inadequate, it may take such action by air, sea or land forces as may be necessary to maintain or restore international peace and security. Such action may include demonstrations, blockade, and other operations by air, sea or land forces of members of the United Nations.

Article 43

1. All members of the United Nations, in order to contribute to the maintenance of international peace and security, undertake to make available to the Security Council, on its call and in accordance with a special agreement or agreements, armed forces, assistance, and facilities, including rights of passage, necessary for the purpose of maintaining international peace and security.

2. Such agreement or agreements shall govern the numbers and types of forces, their degree of readiness and general location, and the nature of the facilities and assistance to be provided.

3. The agreement or agreements shall be negotiated as soon as possible on the initiative of the Security Council. They shall be concluded between the Security Council and members or between the Security Council and groups of members and shall be subject to ratification by the signatory states in accordance with their respective constitutional processes.

Article 44

When the Security Council has decided to use force it shall, before calling upon a member not represented on it to provide armed forces in fulfillment of the obligations assumed under Article 43, invite that member, if the member so desires, to participate in the decisions of the Security Council concerning the employment of contingents of that member's armed forces.

Article 45

In order to enable the United Nations to take urgent military measures, members shall hold immediately available national air force contingents for combined international enforcement action. The strength and degree of readiness of these contingents and plans for their combined action shall be determined, within the limits

laid down in the special agreement or agreements referred to in Article 43, by the Security Council with the assistance of the Military Staff Committee.

Article 46

Plans for the application of armed force shall be made by the Security Council with the assistance of the Military Staff Committee.

Article 47

1. There shall be established a Military Staff Committee to advise and assist the Security Council on all questions relating to the Security Council's military requirements for the maintenance of international peace and security, the employment and command of forces placed at its disposal, the regulation of armaments, and possible disarmament.

2. The Military Staff Committee shall consist of the Chiefs of Staff of the permanent members of the Security Council or their representatives. Any member of the United Nations not permanently represented on the Committee shall be invited by the Committee to be associated with it when the efficient discharge of the Committee's responsibilities requires the participation of that member in its work.

3. The Military Staff Committee shall be responsible, under the Security Council, for the strategic direction of any armed forces placed at the disposal of the Security Council. Questions relating to the command of such forces shall be worked out subsequently.

4. The Military Staff Committee, with the authorization of the Security Council and after consultation with appropriate regional agencies, may establish regional subcommittees.

Article 48

1. The action required to carry out the decisions of the Security Council for the maintenance of international peace and security shall be taken by all the members of the United Nations, or by some of them, as the Security Council may determine.

2. Such decisions shall be carried out by the members of the United Nations directly and through their action in the appropriate international agencies of which they are members.

Article 49

The members of the United Nations shall join in affording mutual assistance in carrying out the measures decided upon by the Security Council.

Article 50

If preventive or enforcement measures against any state are taken by the Security Council, any other state, whether a

member of the United Nations or not, which finds itself confronted with special economic problems arising from the carrying out of those measures shall have the right to consult the Security Council with regard to a solution of those problems.

Article 51

Nothing in the present Charter shall impair the inherent right of individual or collective self-defense, if an armed attack occurs against a member of the United Nations, until the Security Council has taken the measures necessary to maintain international peace and security. Measures taken by members in the exercise of this right of self-defense shall be immediately reported to the Security Council and shall not in any way affect the authority and responsibility of the Security Council under the present Charter to take at any time such action as it deems necessary in order to maintain or restore international peace and security.

CHAPTER VIII

Regional Arrangements

Article 52

1. Nothing in the present Charter precludes the existence of regional arrangements or agencies for dealing with such matters relating to the maintenance of international peace and security as are appropriate for regional action, provided that such arrangements or agencies and their activities are consistent with the purposes and principles of the organization.

2. The members of the United Nations entering into such arrangements or constituting such agencies shall make every effort to achieve pacific settlement of local disputes through such regional arrangements or by such regional agencies before referring them to the Security Council.

3. The Security Council shall encourage the development of pacific settlement of local disputes through such regional arrangements or by such regional agencies either on the initiative of the states concerned or by reference from the Security Council.

4. This Article in no way impairs the application of Articles 34 and 35.

Article 53

1. The Security Council shall, where appropriate, utilize such regional arrangements or agencies for enforcement action under its authority. But no enforcement action shall be taken under regional arrangements or by regional agencies without the authorization of the Security Council, with the exception of measures against any enemy state, as defined in Para-

graph 2 of this Article, provided for pursuant to Article 107, or in regional arrangements directed against renewal of aggressive policy on the part of any such state, until such time as the organization may, on request of the governments concerned, be charged with the responsibility for preventing further aggression by such a state.

2. The term enemy state as used in Paragraph 1 of this Article applies to any state which during the second World War has been an enemy of any signatory of the present Charter.

Article 54

The Security Council shall at all times be kept fully informed of activities undertaken, or in contemplation, under regional arrangements or by regional agencies for the maintenance of international peace and security.

CHAPTER IX

International Economic and Social Cooperation

Article 55

With a view to the creation of conditions of stability and well-being which are necessary for peaceful and friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, the United Nations shall promote:

(a) Higher standards of living, full employment, and conditions of economic and social progress and development;

(b) Solutions of international economic, social, health, and related problems; and international cultural and educational cooperation; and

(c) Universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.

Article 56

All members pledge themselves to take joint and separate action in cooperation with the organization for the achievement of the purposes set forth in Article 55.

Article 57

1. The various specialized agencies, established by inter-governmental agreement and having wide international responsibilities, as defined in their basic instruments in economic, social, cultural, educational, health and related fields, shall be brought into relationship with the United Nations in accordance with the provisions of Article 63.

2. Such agencies thus brought into relationship with the United Nations are

hereinafter referred to as specialized agencies.

Article 58

The organization shall make recommendations for the coordination of the policies and activities of the specialized agencies.

Article 59

The organization shall, where appropriate, initiate negotiations among the states concerned for the creation of any new specialized agencies required for the accomplishment of the purposes set forth in Article 55.

Article 60

Responsibility for the discharge of the functions of the organization set forth in this Chapter shall be vested in the General Assembly and, under the authority of the General Assembly, in the Economic and Social Council, which shall have for this purpose the powers set forth in Chapter X.

CHAPTER X

Economic and Social Council

Composition

Article 61

1. The Economic and Social Council shall consist of eighteen members of the United Nations elected by the General Assembly.

2. Subject to the provisions of Paragraph 3, six members of the Economic and Social Council shall be elected each year for a term of three years. A retiring member shall be eligible for immediate re-election.

3. At the first election, eighteen members of the Economic and Social Council shall be chosen. The term of office of six members so chosen shall expire at the end of one year, and of six other members at the end of two years, in accordance with arrangements made by the General Assembly.

4. Each member of the Economic and Social Council shall have one representative.

Functions and Powers

Article 62

1. The Economic and Social Council may make or initiate studies and reports with respect to international economic, social, cultural, educational, health, and related matters and may make recommendations with respect to any such matters to the General Assembly, to the members of the United Nations, and to the specialized agencies concerned.

2. It may make recommendations for the purpose of promoting respect for, and observance of, human rights and fundamental freedoms for all.

3. It may prepare draft conventions for submission to the General Assembly, with respect to matters falling within its competence.

4. It may call, in accordance with the rules prescribed by the United Nations, international conferences on matters falling within its competence.

Article 63

1. The Economic and Social Council may enter into agreements with any of the agencies referred to in Article 57, defining the terms on which the agency concerned shall be brought into relationship with the United Nations. Such agreements shall be subject to approval by the General Assembly.

2. It may coordinate the activities of the specialized agencies through consultation with and recommendations to such agencies and through recommendations to the General Assembly and to the members of the United Nations.

Article 64

1. The Economic and Social Council may take appropriate steps to obtain regular reports from the specialized agencies. It may make arrangements with the members of the United Nations and with the specialized agencies to obtain reports on the steps taken to give effect to its own recommendations and to recommendations on matters falling within its competence made by the General Assembly.

2. It may communicate its observations on these reports to the General Assembly.

Article 65

The Economic and Social Council may furnish information to the Security Council and shall assist the Security Council upon its request.

Article 66

1. The Economic and Social Council shall perform such functions as fall within its competence in connection with the carrying out of the recommendations of the General Assembly.

2. It may, with the approval of the General Assembly, perform services at the request of members of the United Nations and at the request of the specialized agencies.

3. It shall perform such other functions as are specified elsewhere in the present Charter or as may be assigned to it by the General Assembly.

Voting

Article 67

1. Each member of the Economic and Social Council shall have one vote.

2. Decisions of the Economic and Social Council shall be made by a majority of the members present and voting.

Procedure

Article 68

The Economic and Social Council shall set up commissions in economic and social fields and for the promotion of human rights, and such other commissions as may be required for the performance of its functions.

Article 69

The Economic and Social Council shall invite any member of the United Nations to participate, without vote, in its deliberations on any matter of particular concern to that member.

Article 70

The Economic and Social Council may make arrangements for representatives of the specialized agencies to participate, without vote, in its deliberations and in those of the commissions established by it, and for its representatives to participate in the deliberations of the specialized agencies.

Article 71

The Economic and Social Council may make suitable arrangements for consultation with non-governmental organizations which are concerned with matters within its competence. Such arrangements may be made with international organizations, and, where appropriate, with national organizations after consultation with the member of the United Nations concerned.

Article 72

1. The Economic and Social Council shall adopt its own rules of procedure, including the method of selecting its president.

2. The Economic and Social Council shall meet as required in accordance with its rules, which shall include provision for the convening of meetings on the request of a majority of its members.

CHAPTER XI

Declaration Regarding Non-Self-Governing Territories

Article 73

Members of the United Nations which have or assume responsibilities for the administration of territories whose peoples have not yet attained a full measure of self-government recognize the principle that the interests of the inhabitants of these territories are paramount, and ac-

cept as a sacred trust the obligation to promote to the utmost, within the system of international peace and security established by the present Charter, the well-being of the inhabitants of these territories, and, to this end:

(a) To insure, with due respect for the culture of the peoples concerned, their political, economic, social, and educational advancement, their just treatment, and their protection against abuses;

(b) To develop self-government, to take due account of the political aspirations of the peoples, and to assist them in the progressive development of their free political institutions, according to the particular circumstances of each territory and its peoples and their varying stages of advancement;

(c) To further international peace and security;

(d) To promote constructive measures of development, to encourage research, and to cooperate with one another and, where and where appropriate, with specialized international bodies with a view to the practical achievement of the social, economic and scientific purposes set forth in this Article; and

(e) To transmit regularly to the Secretary-General for information purposes subject to such limitation as security and constitutional considerations may require statistical and other information of a technical nature relating to economic, social, and educational conditions in the territories for which they are respectively responsible other than those territories to which Chapters XII and XIII apply.

Article 74

Members of the United Nations also agree that their policy in respect of the territories to which this Chapter applies, no less than in respect of their metropolitan areas, must be based on the general principle of good-neighborliness, due account being taken of the interests and well-being of the rest of the world in social, economic and commercial matters.

CHAPTER XII

International Trusteeship System

Article 75

The United Nations shall establish under its authority an international trusteeship system for the administration and supervision of such territories as may be placed thereunder by subsequent individual agreements. These territories are hereinafter referred to as trust territories.

Article 76

The basic objectives of the trusteeship system in accordance with the purposes

of the United Nations laid down in Article 11 of the present Charter, shall be:

(a) To further international peace and security;

(b) To promote the political, economic, social and educational advancement of the inhabitants of the trust territories, and their progressive development toward self-government or independence as may be appropriate to the particular circumstances of each territory and its peoples and the freely expressed wishes of the peoples concerned, and as may be provided by the terms of each trusteeship agreement;

(c) To encourage respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language or religion, and to encourage recognition of the interdependence of the peoples of the world; and

(d) To insure equal treatment in social, economic and commercial matters for all members of the United Nations and their nationals, and also equal treatment for the latter in the administration of justice, without prejudice to the attainment of the foregoing objectives, and subject to the provisions of Article 80.

Article 77

1. The trusteeship system shall apply to such territories in the following categories as may be placed thereunder by means of trusteeship agreements:

(a) Territories now held under mandate;

(b) Territories which may be detached from enemy states as a result of the second World War; and

(c) Territories voluntarily placed under the system by states responsible for their administration.

2. It will be a matter for subsequent agreement as to which territories in the foregoing categories will be brought under the trusteeship system and upon what terms.

Article 78

The trusteeship system shall not apply to territories which have become members of the United Nations, relationship among which shall be based on respect for the principle of sovereign equality.

Article 79

The terms of trusteeship for each territory to be placed under the trusteeship system, including any alteration or amendment, shall be agreed upon by the states directly concerned, including the mandatory power in the case of territories held under mandate by a member of the United Nations, and shall be approved as provided in Articles 83 and 85.

Article 80

1. Except as may be agreed upon in individual trusteeship agreements, made under Articles 77, 79 and 81, placing each territory under the trusteeship system, and until such agreements have been concluded, nothing in this Chapter shall be construed in or of itself to alter in any manner the rights whatsoever of any states or any peoples or the terms of existing international instruments to which members of the United Nations may respectively be parties.

2. Paragraph 1 of this Article shall not be interpreted as giving grounds for delay or postponement of the negotiation and conclusion of agreements for placing mandated and other territories under the trusteeship system as provided for in Article 77.

Article 81

The trusteeship agreement shall in each case include the terms under which the trust territory will be administered and designate the authority which will exercise the administration of the trust territory. Such authority, hereinafter called the administering authority, may be one or more states or the organization itself.

Article 82

There may be designated, in any trusteeship agreement, a strategic area or areas which may include part or all of the trust territory to which the agreement applies, without prejudice to any special agreement or agreements made under Article 43.

Article 83

1. All functions of the United Nations relating to strategic areas, including the approval of the terms of the trusteeship agreements and of their alteration or amendment, shall be exercised by the Security Council.

2. The basic objectives set forth in Article 76 shall be applicable to the people of each strategic area.

3. The Security Council shall, subject to the provisions of the trusteeship agreements and without prejudice to security considerations, avail itself of the assistance of the Trusteeship Council to perform those functions of the United Nations under the trusteeship system relating to political, economic, social and educational matters in the strategic areas.

Article 84

It shall be the duty of the administering authority to insure that the trust territory shall play its part in the maintenance of international peace and security. To this end the administering authority may make use of volunteer forces, facili-

ties, and assistance from the trust territory in carrying out the obligations toward the Security Council undertaken in this regard by the administering authority, as well as for local defense and the maintenance of law and order within the trust territory.

Article 85

1. The functions of the United Nations with regard to trusteeship agreements for all areas not designated as strategic, including the approval of the terms of the trusteeship agreements and of their alteration or amendment, shall be exercised by the General Assembly.

2. The Trusteeship Council, operating under the authority of the General Assembly, shall assist the General Assembly in carrying out these functions.

CHAPTER XIII

The Trusteeship Council

Composition

Article 86

1. The Trusteeship Council shall consist of the following members of the United Nations:

(a) Those members administering trust territories;

(b) Such of those members mentioned by name in Article 23 as are not administering trust territories; and

(c) As many other members elected for three-year terms by the General Assembly as may be necessary to insure that the total number of members of the Trusteeship Council is equally divided between those members of the United Nations which administer trust territories and those which do not.

2. Each member of the Trusteeship Council shall designate one specially qualified person to represent it therein.

Functions and Powers

Article 87

The General Assembly and, under its authority, the Trusteeship Council, in carrying out their functions, may:

(a) Consider reports submitted by the administering authority;

(b) Accept petitions and examine them in consultation with the administering authority;

(c) Provide for periodic visits to the respective trust territories at times agreed upon with the administering authority; and

(d) Take these and other actions in conformity with the terms of the trusteeship agreements.

Article 88

The Trusteeship Council shall formulate a questionnaire on the political, economic, social and educational advancement of the inhabitants of each trust territory, and the administering authority for each trust territory within the competence of the General Assembly shall make an annual report to the General Assembly upon the basis of such questionnaire.

Voting

Article 89

1. Each member of the Trusteeship Council shall have one vote.

2. Decisions of the Trusteeship Council shall be made by a majority of the members present and voting.

Procedure

Article 90

1. The Trusteeship Council shall adopt its own rules of procedure, including the method of selecting its president.

2. The Trusteeship Council shall meet as required in accordance with its rules, which shall include provision for the convening of meetings on the request of a majority of its members.

Article 91

The Trusteeship Council shall, when appropriate, avail itself of the assistance of the Economic and Social Council and of the specialized agencies in regard to matters with which they are respectively concerned.

CHAPTER XIV

The International Court of Justice

Article 92

The International Court of Justice shall be the principal judicial organ of the United Nations. It shall function in accordance with the annexed statute, which is based upon the statute of the Permanent Court of International Justice and forms an integral part of the present Chapter.

Article 93

1. All members of the United Nations are ipso facto parties to the statute of the International Court of Justice.

2. A state which is not a member of the United Nations may become a party to the statute of the International Court of Justice on conditions to be determined in each case by the General Assembly upon the recommendation of the Security Council.

Article 94

1. Each member of the United Nations undertakes to comply with the decision of

the International Court of Justice in any case to which it is a party.

2. If any party to a case fails to perform the obligations incumbent upon it under a judgment rendered by the Court, the other party may have recourse to the Security Council, which may, if it deems necessary, make recommendations or decide upon measures to be taken to give effect to the judgment.

Article 95

Nothing in the present Charter shall prevent members of the United Nations from entrusting the solution of their differences to other tribunals by virtue of agreements already in existence or which may be concluded in the future.

Article 96

1. The General Assembly or the Security Council may request the International Court of Justice to give an advisory opinion on any legal question.

2. Other organs of the United Nations and specialized agencies which may at any time be so authorized by the General Assembly, may also request advisory opinions of the Court on legal questions arising within the scope of their activities.

CHAPTER XV

The Secretariat

Article 97

The Secretariat shall comprise a Secretary General and such staff as the organization may require. The Secretary General shall be appointed by the General Assembly upon the recommendation of the Security Council. He shall be the chief administrative officer of the organization.

Article 98

The Secretary General shall act in that capacity in all meetings of the General Assembly, of the Security Council, of the Economic and Social Council and of the Trusteeship Council, and shall perform such other functions as are entrusted to him by these organs. The Secretary General shall make an annual report to the General Assembly on the work of the organization.

Article 99

The Secretary General may bring to the attention of the Security Council any matter which in his opinion may threaten the maintenance of international peace and security.

Article 100

1. In the performance of their duties the Secretary General and the staff shall not seek or receive instructions from any government or from any other authority external to the organization. They shall

refrain from any action which might reflect on their position as international officials responsible only to the organization.

2. Each member of the United Nations undertakes to respect the exclusively international character of the responsibilities of the Secretary General and the staff, and not to seek to influence them in the discharge of their responsibilities.

Article 101

1. The staff shall be appointed by the Secretary General under regulations established by the General Assembly.

2. Appropriate staffs shall be permanently assigned to the Economic and Social Council, the Trusteeship Council, and, as required, to other organs of the United Nations. These staffs shall form a part of the Secretariat.

3. The paramount consideration in the employment of the staff and in the determination of the conditions of service shall be the necessity of securing the highest standards of efficiency, competence and integrity. Due regard shall be paid to the importance of recruiting the staff on as wide a geographical basis as possible.

CHAPTER XVI

Miscellaneous Provisions

Article 102

1. Every treaty and every international agreement entered into by any member of the United Nations after the present Charter comes into force shall as soon as possible be registered with the Secretariat and published by it.

2. No party to any such treaty or international agreement which has not been registered in accordance with the provisions of Paragraph 1 of this Article may invoke that treaty or agreement before any organ of the United Nations.

Article 103

In the event of a conflict between the obligations of the members of the United Nations under the present Charter and their obligations under any other international agreement, their obligations under the present Charter shall prevail.

Article 104

The organization shall enjoy in the territory of each of its members such legal capacity as may be necessary for the exercise of its functions and the fulfillment of its purposes.

Article 105

1. The organization shall enjoy in the territory of each of its members such privileges and immunities as are necessary for the fulfillment of its purposes.

2. Representatives of the members of the United Nations and officials of the organization shall similarly enjoy such privileges and immunities as are necessary for the independent exercise of their functions in connection with the organization.

3. The General Assembly may make recommendations with a view to determining the details of the application of Paragraphs 1 and 2 of this Article or may propose conventions to the members of the United Nations for this purpose.

CHAPTER XVII

Transitional Security Arrangements

Article 106

Pending the coming into force of such special agreements referred to in Article 43, as in the opinion of the Security Council enable it to begin the exercise of its responsibilities under Article 42, the parties to the Four-Nation Declaration, signed at Moscow, Oct. 30, 1943, and France, shall, in accordance with the provisions of Paragraph 5 of that Declaration, consult with one another and, as occasion requires, with other members of the United Nations with a view to such joint action on behalf of the organization as may be necessary for the purpose of maintaining international peace and security.

Article 107

Nothing in the present Charter shall invalidate or preclude action in relation to any state which during the second World War has been an enemy of any signatory to the present Charter, taken or authorized as a result of that war by the governments having responsibility for such action.

CHAPTER XVIII

Amendments

Article 108

Amendments to the present Charter shall come into force for all members of the United Nations when they have been adopted by a vote of two-thirds of the members of the General Assembly and ratified in accordance with their respective constitutional processes by two-thirds of the members of the United Nations, including all the permanent members of the Security Council.

Article 109

1. A general conference of the members of the United Nations for the purpose of reviewing the present Charter may be held at a date and place to be fixed by a two-thirds vote of the members of the General Assembly and by a vote of any seven members of the Security Council. Each member of the United Nations shall have one vote in the conference.

2. Any alteration of the present Charter recommended by a two-thirds vote of the conference shall take effect when ratified in accordance with their respective constitutional processes by two-thirds of the members of the United Nations including all the permanent members of the Security Council.

3. If such a conference has not been held before the tenth annual session of the General Assembly following the coming into force of the present Charter, the proposal to call such a conference shall be placed on the agenda of that session of the General Assembly, and the conference shall be held if so decided by a majority vote of the members of the General Assembly and by a vote of any seven members of the Security Council.

CHAPTER XIX

Ratification and Signature

Article 110

1. The present Charter shall be ratified by the signatory states in accordance with their respective constitutional processes.

2. The ratifications shall be deposited with the Government of the United States of America, which shall notify all the signatory states of each deposit as well as the Secretary General of the organization when he has been appointed.

3. The present Charter shall come into force upon the deposit of ratifications by the Republic of China, France, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, and the United States of America, and by a majority of the other signatory states. A protocol of the ratifications deposited shall thereupon be drawn up by the Government of the United States of America which shall communicate copies thereof to all the signatory states.

4. The states signatory to the present Charter which ratify it after it has come into force will become original members of the United Nations on the date of the deposit of their respective ratifications.

Article 111

The present Charter, of which the Chinese, French, Russian, English and Spanish texts are equally authentic, shall remain deposited in the archives of the Government of the United States of America. Duly certified copies thereof shall be transmitted by that Government to the Governments of the other signatory states.

In faith whereof the representatives of the Governments of the United Nations have signed the present Charter.

Done at the city of San Francisco the twenty-sixth day of June, one thousand nine hundred and forty-five.

THE UNITED NATIONS

Twenty-six nations at war against the Axis signed the original Declaration by United Nations at Washington on January 1, 1942. Members admitted later are shown in italics with the year of their admission.

Members of the Security Council are indicated by the letters SC followed by the year their membership expires.

Members of the Economic and Social Council are indicated by the letters ESC followed by the year membership expires.

Nations which were at any time members of the League of Nations are indicated by the letters L; if they ceased to be members, this fact is indicated either by *withdrew* or *expelled*.

The World Food Problem

Among the great problems caused by World War II were those of starvation and famine. This necessitated the establishment of many international organizations within the United Nations. Outstanding among these was UNRRA, but that could only concern itself with a temporary solution of the problem. Therefore, the United Nations also created a Food and Agriculture Organization with S. M. Bruce as the

chairman of the preparatory commission. This commission as the result of a conference at Copenhagen established as its objective the following: developing and organizing production, distribution and utilization of the basic foods to provide diets on a health standard for the peoples of all nations; stabilizing agricultural prices at levels fair to producers and consumers alike.

Agenda of the United Nations General Assembly

The United Nations General Assembly reassembled at Lake Success, N. Y., on October 23, 1946. By October 31st, it prepared its agenda and divided the work ahead among six main committees. All the committees were to meet at Lake Success.

The *Political and Security Committee* was assigned the following tasks: to consider the problem of admission of new members to the United Nations; to study the reports of the Security Council; the method of voting in the Security Council; the problem of the veto privilege or its elimination, to consider the problem of troops of the United Nations on non-enemy territory. Declarations on the rights and duties of states were to be drafted as well as a declaration on fundamental human rights and freedoms. It was to report back on the Russian disarmament proposals. Lastly, it was to concern itself with a five-power letter on Spain.

The second committee, the *Economic and Financial*, was given the task of studying the report by Secretary General Trygve Lie on action in the matter of world shortage of cereal. It was to study the report given by Fiorello H. LaGuardia, Director General of the UNNRA, and the report of the Economic and Social Council on the economic reconstruction of devastated areas.

The third committee, the *Social, Humanitarian and Cultural*, was to study the report of the Economic and Social Council on the question of refugees and displaced persons and to reconsider the constitution of the International Refugee Organization. The resolution of the Economic and Social Council regarding the transfer of welfare activities of UNNRA was referred to it, as was that regarding the establishment of an International Children's Emergency Fund. They were given resolutions about a World Health Organization and national Red Cross societies. They were to study the problem of the assumption of functions and powers previously exercised by the League of Nations on narcotic drugs. They were to organize an International Press Conference. The Danish resolution on the equality of women and a French proposal for summoning a preparatory conference of experts on housing and town planning was submitted to them. Together with the Economic and Financial Council, they were to study relations between the United Nations and specialized agencies. In cooperation with the legal committee, they were to consider agreements concluded with specialized agencies and the transfer of other functions of the League of Nations.

The fourth committee, the *Trusteeship*, was to receive the report of the Secretary General on trusteeship agreements. It was

given statements by the Union of South Africa on the outcome on their consultations with the peoples of South West Africa as to the future status of the mandated territory and implementation of the wishes thus expressed. To it was submitted the report by members concerning non-self-governing territories.

The fifth committee, *Administrative and Budgetary*, was to consider those articles of the International Refugee Organization dealing with finances. It was to consider and approve the first and second annual budgets of the organization for the years 1946 and 1947. The reports on the organization and administration of the Secretariat was to be studied in conjunction with the Legal Committee, as was the report on budgetary and financial arrangements and apportionment of expenses. The resolution submitted by the Economic and Social Council regarding the utilization of the property rights of the League of Nations in the International Institute of Intellectual Cooperation was referred to this committee, as was the transfer to the United Nations of certain assets of the League of Nations. An election of members of the advisory committee on administrative and budgetary questions was held.

The sixth committee, the *Legal Committee*, had as its function consideration of the following topics: changes in the provisional rules of procedure required to give effect to decisions taken regarding terms of office of members of councils; immunities and privileges for the judges and staff officials of the International Court of Justice; regulations regarding the registration of treaties; the legality of requesting advisory opinions by the Council from the International Court of Justice; the adoption of an official emblem of the United Nations; the progressive development of International Law and its codification. It was to consider a joint report of the Secretary General and the Committee on Negotiations with the competent authorities of the United States regarding the arrangements required as a result of the establishment of the seat of the United Nations in the United States of America. In conjunction with the Administrative and Budgetary Committee, it was to study the recommendations concerning the administration of the International Court of Justice and was to approve agreements concerning the premises at the Peace Palace at The Hague.

The chief function of the General Committee was to determine a system or technique whereby the time of the General Assembly could be most economically employed. In all, there was a total of fifty-six items on the agenda of this most important meeting.

United Nations Security Council, 1947

As a result of the election in the General Assembly of the United Nations at Flushing Meadow, N. Y., on November 19,

1946, the membership of the United Nations Security Council, beginning January 1, 1947, was set as follows:

Australia
(Until 1948)

Belgium
(Until 1949)

Brazil
(Until 1948)

China
(Permanent)

Colombia
(Until 1949)

France
(Permanent)

Poland
(Until 1948)

Syria
(Until 1949)

U. S. S. R.
(Permanent)

United Kingdom
(Permanent)

United States
(Permanent)

Belgium, Colombia and Syria were chosen as the new members to replace Egypt, Mexico and The Netherlands, whose terms expired December 31, 1946. Blocs of nations seemed to have developed which

more or less combined to ensure the election of a member they particularly desired. Thus, the Latin-American bloc concentrated on the election of Colombia and the Arab bloc on the election of Syria.

Vetoes in the Security Council, 1946

The outstanding examples of the use of the veto power show that the Soviet Union used the veto power about eight times, the United States and the United Kingdom, twice each, and France, once.

On February 16th, Vice Foreign Minister Vishinsky of U. S. S. R., vetoed a United States proposal that would in effect have dismissed the Soviet charges against Britain and France for keeping troops in Syria and Lebanon.

On June 18th, at Hunter College, N. Y., Soviet Representative Gromyko vetoed a sub-committee's proposal on investigating the Spanish question, and again on June 26th, a British-Australian proposal to

keep the Spanish question on the agenda without prejudice to the rights of the General Assembly.

On August 29th, at Lake Success, the Soviet Union vetoed the application to membership in the United Nations of Trans-Jordan, Eire and Portugal. On the same day, the United States and Great Britain vetoed the admission of Albania and Outer Mongolia.

On June 10th, Mr. Gromyko vetoed a resolution inviting Canada to be present during a report by the Atomic Energy Commission, but did not insist on his veto when nine nations voted in the affirmative.

The Fourteen Points

Wilson's Address to Congress January 8, 1918

GENTLEMEN of the Congress:

It will be our wish and purpose that the processes of peace, when they are begun, shall be absolutely open and that they shall involve and permit henceforth no secret understandings of any kind. The day of conquest and aggrandizement is gone by; so is also the day of secret covenants entered into in the interest of particular governments and likely at some unlooked-for moment to upset the peace of the world. It is this happy fact, now clear to the view of every public man whose thoughts do not still linger in an age that is dead and gone, which makes it possible for every nation whose purposes are consistent with justice and the peace of the world to avow now or at any other time the objects it has in view.

We entered this war because violations of right had occurred which touched us to the quick and made the life of our own people impossible unless they were corrected and the world secured once for all against their recurrence. What we demand in this war, therefore, is nothing peculiar to ourselves. It is that the world be made fit and safe to live in; and particularly that it be made safe for every peace-loving nation which, like our own, wishes to live its own life, determine its own institutions, be assured of justice and fair dealing by the other peoples of the world as against force and selfish aggression. All the peoples of the world are in effect partners in this interest, and for our own part we see very clearly that unless justice be done to others it will not be done to us. The pro-

gram of the world's peace, therefore, is our program; and that program, the only possible program, as we see it, is this:

I. Open covenants of peace, openly arrived at, after which there shall be no private international understandings of any kind but diplomacy shall proceed always frankly and in the public view.

II. Absolute freedom of navigation upon the seas, outside territorial waters, alike in peace and in war, except as the seas may be closed in whole or in part by international action for the enforcement of international covenants.

III. The removal, so far as possible, of all economic barriers and the establishment of an equality of trade conditions among all the nations consenting to the peace and associating themselves for its maintenance.

IV. Adequate guarantees given and taken that national armaments will be reduced to the lowest point consistent with domestic safety.

V. A free, open-minded, and absolutely impartial adjustment of all colonial claims, based upon a strict observance of the principle that in determining all such questions of sovereignty the interests of the populations concerned must have equal weight with the equitable claims of the government whose title is to be determined.

VI. The evacuation of all Russian territory and such a settlement of all questions affecting Russia as will secure the best and freest cooperation of the other nations of the world in obtaining for her an unhampered and unembarrassed opportunity for the independent determination of her own political development and national policy and assure her of a sincere welcome into the society of free nations under institutions of her own choosing; and, more than a welcome, assistance also of every kind that she may need and may herself desire. The treatment accorded Russia by her sister nations in the months to come will be the acid test of their good will, of their comprehension of her needs as distinguished from their own interests, and of their intelligent and unselfish sympathy.

VII. Belgium, the whole world will agree, must be evacuated and restored, without any attempt to limit the sovereignty which she enjoys in common with all other free nations. No other single act will serve as this will serve to restore confidence among the nations in the laws which they have themselves set and determined for the government of their relations with one another. Without this healing act the whole structure and validity of international law is forever impaired.

VIII. All French territory should be freed and the invaded portions restored, and the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine, which has unsettled the peace of the world for nearly fifty years, should be righted, in order that peace may once more be made secure in the interest of all.

IX. A readjustment of the frontiers of Italy should be effected along clearly recognizable lines of nationality.

X. The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the freest opportunity of autonomous development.

XI. Rumania, Serbia, and Montenegro should be evacuated; occupied territories restored; Serbia accorded free and secure access to the sea; and the relations of the several Balkan states to one another determined by friendly counsel along historically established lines of allegiance and nationality; and international guarantees of the political and economic independence and territorial integrity of the several Balkan states should be entered into.

XII. The Turkish portions of the present Ottoman Empire should be assured a secure sovereignty, but the other nationalities which are now under Turkish rule should be assured an undoubted security of life and an absolutely unmolested opportunity of autonomous development, and the Dardanelles should be permanently opened as a free passage to the ships and commerce of all nations under international guarantees.

XIII. An independent Polish state should be erected which should include the territories inhabited by indisputably Polish populations, which should be assured a free and secure access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenant.

XIV. A general association of nations must be formed under specific covenants for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike.

In regard to these essential rectifications of wrong and assertions of right we feel ourselves to be intimate partners of all the governments and peoples associated together against the Imperialists. We cannot be separated in interest or divided in purpose. We stand together until the end.

For such arrangements and covenants we are willing to fight and to continue to fight until they are achieved; but only because we wish the right to prevail and desire a just and stable peace such as can

be secured only by removing the chief provocations to war, which this program does not remove. We have no jealousy of German greatness, and there is nothing in this program that impairs it. We grudge her no achievement or distinction of learning or of pacific enterprise such as have made her record very bright and very enviable. We do not wish to injure her or to block in any way her legitimate influence or power. We do not wish to fight her either with arms or with hostile arrangements of trade if she is willing to associate herself with us and the other peace-loving nations of the world in covenants of justice and law and fair dealing. We wish her only to accept a place of equality among the peoples of the world,—the new world in which we now live,—instead of a place of mastery.

Neither do we presume to suggest to her any alteration or modification of her institutions. But it is necessary, we must frankly say, and necessary as a preliminary to any intelligent dealings with her on our part, that we should know whom her

spokesmen speak for when they speak to us, whether for the Reichstag majority or for the military party and the men whose creed is imperial domination.

We have spoken now, surely, in terms too concrete to admit of any further doubt or question. An evident principle runs through the whole program I have outlined. It is the principle of justice to all peoples and nationalities, and their right to live on equal terms of liberty and safety with one another, whether they be strong or weak. Unless this principle be made its foundation no part of the structure of international justice can stand. The people of the United States could act upon no other principle; and to the vindication of this principle they are ready to devote their lives, their honor, and everything that they possess. The moral climax of this the culminating and final war for human liberty has come, and they are ready to put their own strength, their own highest purpose, their own integrity and devotion to the test.

The Atlantic Charter

(In a dramatic meeting off Newfoundland, August 14, 1941, President Roosevelt and Winston Churchill formulated this statement of common war aims.)

The President of the United States of America and the Prime Minister, Mr. Churchill, representing His Majesty's Government in the United Kingdom, being met together, deem it right to make known certain common principles in the national policies of their respective countries on which they base their hopes for a better future for the world.

FIRST, their countries seek no aggrandizement, territorial or other;

SECOND, they desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned;

THIRD, they respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self government restored to those who have been forcibly deprived of them;

FOURTH, they will endeavor, with due respect for their existing obligations, to further the enjoyment by all States, great or small, victor or vanquished, of access, on equal terms, to the trade and to the raw materials of the world which are needed for their economic prosperity;

FIFTH, they desire to bring about the fullest collaboration between all nations in the economic field with the object of securing, for all, improved labor standards, economic advancement and social security;

SIXTH, after the final destruction of Nazi tyranny, they hope to see established a peace which will afford to all nations the means of dwelling in safety within their own boundaries, and which will afford assurance that all men in all lands may live out their lives in freedom from fear and want;

SEVENTH, such a peace should enable all men to traverse the high seas and oceans without hindrance;

EIGHTH, they believe that all the nations of the world, for realistic as well as spiritual reasons, must come to the abandonment of the use of force. Since no future peace can be maintained if land, sea or air armaments continue to be employed by nations which threaten, or may threaten, aggression outside of their frontiers, they believe, pending the establishment of a wider and permanent system of general security, that the disarmament of such nations is essential. They will likewise aid and encourage all other practicable measures which will lighten for peace-loving peoples the crushing burden of armaments.

FRANKLIN D. ROOSEVELT
WINSTON S. CHURCHILL

THE OTHER NATIONS OF THE WORLD

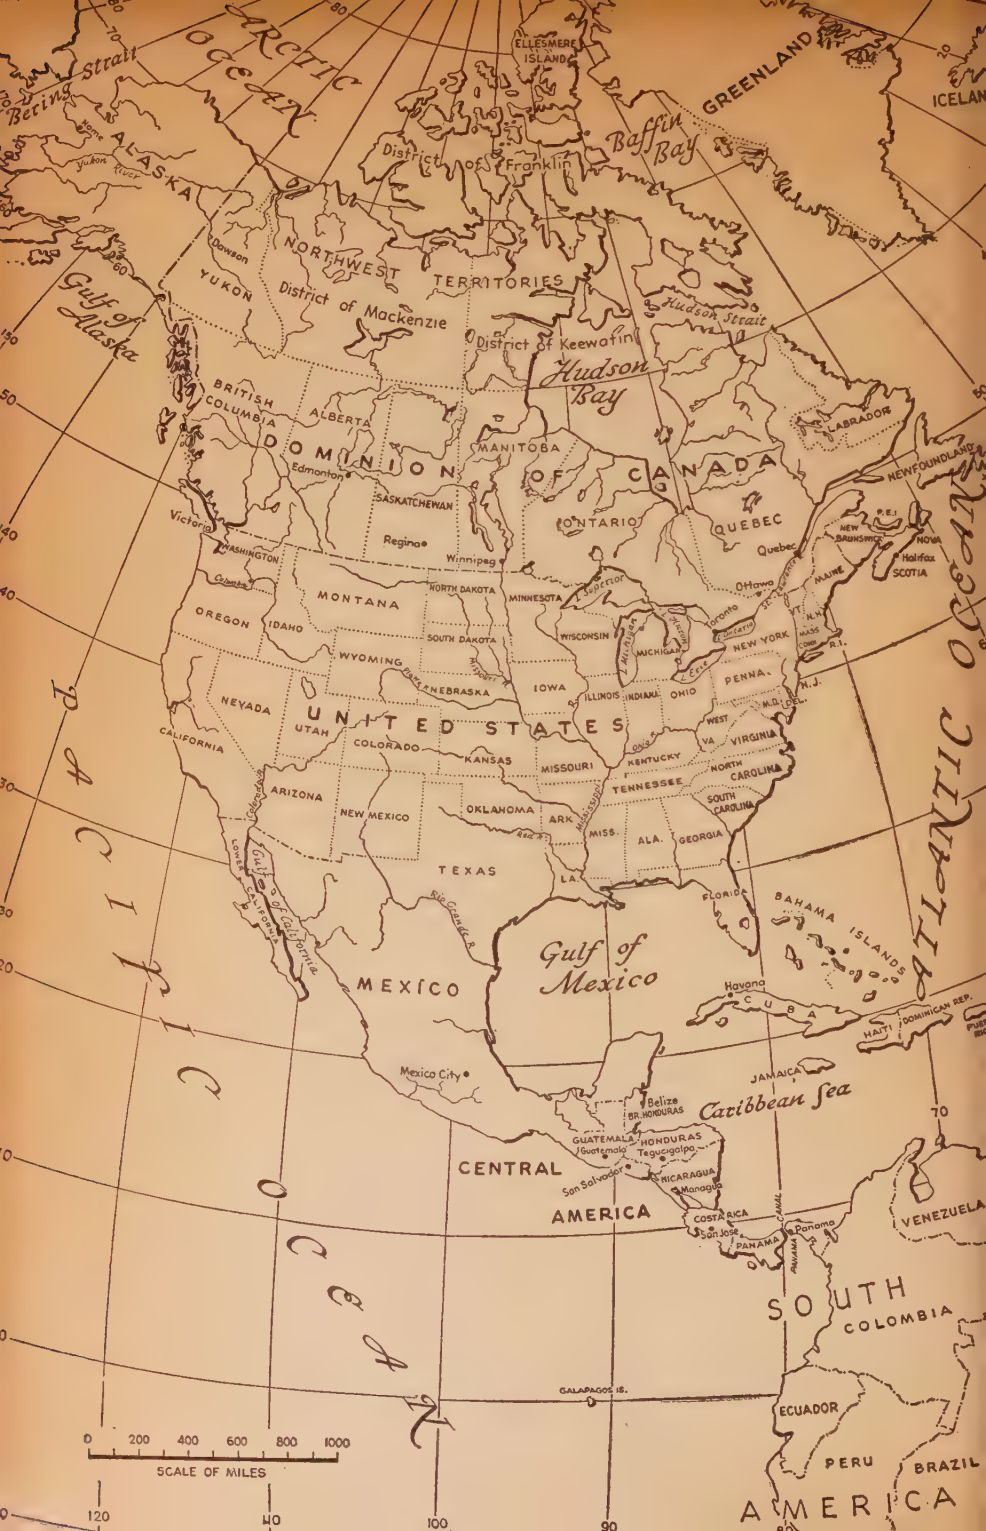

A GUIDE TO THE MAIN HISTORICAL,
POLITICAL, GEOGRAPHIC, ECONOMIC
AND SOCIAL CONDITIONS

Prepared under the direction of

WALTER YUST

Editor-in-chief, *Encyclopaedia Britannica*

THE OTHER NATIONS OF THE WORLD

Afghanistan (Kingdom)

Area: 250,000 square miles.

Population (est. 1940): 10,000,000.

Density per square mile: 40.

Ruler: Mohammed Zaher Shah.

Premier: Shah Mahmoud Khan Ghazi.

Principal cities (est.): Kabul, 80,000 (capital); Kandahar, 60,000 (trading center); Herat, 50,000 (farming).

Monetary unit: Afghani.

Racial stock (est.): Afghan, 35%; Tadchik, 21%; Mongolian, 8.5%; Others, 35.5%.

Languages: Persian, Pushtu, Turki.

Religion: Mohammedan.

Afghanistan, landlocked between India and Iran in western Asia, did not become a distinct political entity until 1747. Before that, it was variously a cluster of small states under nominal Arab rule, or part of Mongol or Moghul empires, or a dismembered object parceled among India, Persia and the Uzbeks.

In the 19th century it was recognized as a British sphere of influence, though the British had to send troops in more than once to enforce Afghan friendliness. In 1880 the British recognized Abdur Rahman Khan as Emir and gave him an annual subsidy of more than \$500,000 to delegate his foreign relations to India. His son, Habibullah, succeeded him in 1901 and kept Afghanistan neutral in World War I despite strong pressure of pro-Turkish elements. On Aug. 8, 1919, a treaty was signed making Afghanistan free and independent of all British control. The country maintained strict neutrality in World War II.

Afghanistan's present sovereign, Mohammed Zaher Shah, was born on Oct. 15, 1914, was married in 1931 to his cousin, Umairah. They have two sons and two daughters.

Under the 1932 constitution, Afghanistan is a constitutional monarchy, with authority vested in the sovereign and parliament, which has a senate of forty-five members named for life by the sovereign and a national assembly of 109 elected members. Executive power is exercised by the sovereign and cabinet headed by the prime minister. Each of the nine provinces is headed by a governor. Military service is compulsory from the age of eighteen to forty, with an initial training period of two years. Peacetime army strength is about 90,000, supplemented by tribal bands. There is a small air force.

Education is nominally compulsory. Primary schools exist in many parts of the country but secondary schools only in Kabul and the provincial capitals. In 1940 there were 130 primary, four secondary, and thirteen military schools, and a normal school and a university, both in Kabul.

Afghanistan is a stronghold of Islam. The official language is Persian, but Pushtu is more widely spoken, especially in the west, while Turki is the popular tongue in the north.

The greater part of the country is mountainous and rocky but farming is carried on successfully in the fertile valleys and plains, sometimes with the aid of irrigation. Two crops a year are usually grown. Important ones include the asafetida plant, castor beans, cereals, fruit, madder, tobacco, cotton and vegetables. Wheat is the staple food. Many of the people are pastoral and there is considerable grazing land. The fat-tailed indigenous sheep is the principal source of meat, wearing apparel and skins for export. Camels, humped cattle, oxen and asses are numerous.

There are small chemical, clothing, leather, textile and woodworking factories in Kabul. Important manufactures include silk, felt, sheepskin coats, soap, carpets and boots. Additional factories are being erected by government monopolies; the latter includes karakul, sugar, cotton, vehicles and heat and light.

Exports in 1938 included 915,054 karakul skins, 2,727 tons of cotton, 5,699 tons of wool, 737 rugs, 108,747 square yards of carpet, 27,788 tons of dried raisins and apricots, 18,621 tons of fruit and 6,540 tons of nuts. Most of the trade is carried on through India but cattle and foodstuffs are exported to Soviet territory whose imports into northern Afghanistan include cotton and wool. Trade with Iran is negligible. Soviet trade with Afghanistan is handled by *Vostokintorg*, a Soviet government trade monopoly.

Afghanistan has no railways. Transport is generally by camel or pack horse. The principal trade routes are through the Khyber and Khojak Passes to India, and to the Uzbek and Turkmen Soviet Socialist Republics. There are about 2,265 miles of roads suitable for motor transport connecting the chief towns.

Revenue and expenditure amount to about \$45,000,000 a year. The revenue

comes from customs, land taxes and government monopolies.

Afghanistan is split east to west by the Hindu Kush Range of the Himalayas, rising in the east to heights of 24,000 feet. Except in the southwest, most of the country is covered by high snow-capped mountains and deep valleys. The few passes are deep and narrow. The Oxus, Kabul and Helmund are the most important rivers, and there are hundreds of swift and unnavigable mountain streams. The northern climate ranges from extremes of below zero to over 100 degrees. The south is not so extreme although snowfall is heavy all over the country in winter.

Both mineral and forest resources are largely unexploited. There are deposits of coal, copper, gold, iron ore, oil and silver. Timber and gum resin are obtained from the forests.

Albania (Republic)

(Shqipëria)

Area: 10,631 square miles.

Population (est. 1939): 1,063,000.

Density per square mile: 100.0.

Head of the Government: Col. Gen. Enver Hoxha.

Principal cities (census 1930): Tiranë (Tirana), 30,806 (capital); Shkodër (Scutari), 29,209 (northern trading center); Korçë (Koritsa), 22,787 (farming center).

Monetary unit: Albanian franc.

Racial stock: Albanian, 99.8%; others, .2%.

Language: Albanian.

Religions (est.): Moslem, 69%; Orthodox Christian, 21%; Roman Catholic, 10%.

Albania, looking out on the Adriatic Sea from an area about the size of Maryland, is a rugged, backward agricultural state. Anciently a part of Illyria and later, of the Roman Empire, it was ruled by the Byzantine Empire from 535 to 1204 A.D. An alliance (1444-1466) of Albanian chiefs failed to halt the advance of the Turks and the country remained under at least nominal Turkish rule for more than four centuries, until it proclaimed its independence on Nov. 28, 1912. Prince William of Wied, the new ruler, was forced to leave the country on Sept. 3, 1914, and through World War I anarchy gripped Albania which was variously occupied by Italian, Greek, French, Serb and Austro-Bulgarian forces. On Aug. 2, 1920, Italy recognized Albanian independence and evacuated the country. Ahmed Zogu, premier in 1922-23, ousted the government of Mgr. Fan Stylian Noli in 1924 and became president of a newly constituted republic in 1925. Three years later, after concluding pacts putting Albania in Italy's sphere of influence, Zogu proclaimed himself King Zog I. In 1939

Benito Mussolini set his Italian army on defenseless Albania and quickly conquered and annexed it. World War II brought German occupation but Albania was free by the end of 1944 and established a leftist provisional government under Colonel General Enver Hoxha. That regime was confirmed in power by subsequent elections, and British, Russian and U. S. recognition. Since then, Albania has collaborated closely with Russia and Yugoslavia. Meanwhile, in mid-1946, the Greeks were demanding the Albanian area of northern Epirus.

Elections of Dec. 2, 1945 for the constituent assembly officially gave 93 percent of the votes to a Democratic Front of various resistance elements including some Communists. On Jan. 11, 1946, the assembly proclaimed Albania a republic with Hoxha as head of government, commander-in-chief of the armed forces and defense minister. He is assisted by a cabinet of Democratic Frontists. For administration, the country is divided into nine prefectures.

The army, unofficially estimated at 50,000 men, in five low-strength divisions, grew out of resistance forces mainly U. S. and British-equipped. In late 1944 and early 1945 several regiments were sent into Bosnia and Montenegro to help fight retreating Germans.

While primary education is nominally compulsory, illiteracy is high, especially among women. In 1939 there were 663 state primary schools with 56,936 pupils, and nineteen secondary schools with 6,235 students. There are no institutions of higher learning. According to whether they live north or south of the Shkumbi River, Albanians are called Ghegs or Tosks, and live in clans or tribes, recalling feudal Europe. Moslems predominate in most areas.

Albania is still a primitive country where each family tries to provide most of its own needs. Nearly the whole population is engaged in combined farming and stockraising. Mountainous areas in north and south are unfit for cultivation, and only a small portion of the central part is fit for plow. Corn is the chief crop—155,755 tons in 1938. Others are wheat, tobacco, oats, barley, rye, spelt, olives and citrus fruit. Only a few factories are engaged in processing Albania's food products.

Albania has had an adverse trade balance since World War I. Imports in 1938 were \$6,719,000 of which 37.2% came from Italy, 11.2% from Yugoslavia, and 6% from the United States. Exports were \$2,925,000 of which 68.4% went to Italy, 14.7% to Greece, and 4.5% to the U. S. The chief imports were cotton and cotton goods (21.6%), corn, benzine, woolen goods and petroleum; the main exports, wool (13.6%),

hides and furs (13.5%), cheese, cattle, eggs and bitumen.

Albania has no railroads, but good highways were developed by the Italians for strategic purposes and the Russians continue such construction. The principal and only fully equipped port is Durrës (Durazzo).

Before World War II revenues were insufficient to meet the costs of government, and the country was financially dependent on Italy. Revenues in 1939 were \$9,140,928; expenditures, \$9,035,328. The national debt in 1938 was \$20,460,000, of which three quarters was external. The chief foreign investments were Italian.

Albania is a mountainous state, largely over 3,000 ft. above sea level, with a narrow marshy coastal plain crossed by several rivers. A complex, often inaccessible mountainous hinterland encloses small fertile basins, and contains some wide valleys, the largest of which is that of Lake Ohrid in the southeast. The interior mountain plateaus and basins contain the centers of population. With the exception of the Bojana in the northwest, which is the outlet of Lake Scutari (135 sq. mi.) to the Adriatic, there are no navigable rivers.

Mineral wealth, thought to be considerable, is relatively unexploited. The principal minerals are aluminum (1938 output: 9,920,700 lbs.) and petroleum (1939 output: 229,278 short tons). There are also lignite, bitumen, asphalt, copper and iron deposits.

Forest resources include large stands of oak, walnut, chestnut and elm and in the high regions, beech, pine and fir. Almost all forests are owned by the communes and the state.

Arabia

The Arabian peninsula, at the southwest extremity of Asia and measuring about four times the size of Texas, was once a single political unit, but today it consists of the kingdoms of Saudi Arabia and Yemen, the British colony of Aden and six British protectorates. The peninsula, with an area of about one million square miles, and extreme length of 1,400 miles, is generally a plateau sloping gently eastward from a mountain range that averages 5,000 feet in elevation and runs along its entire west side within ten or fifteen miles of the Red Sea. The range reaches a maximum of 12,236 feet in Yemen.

Arabia has no rivers and no forests and is principally a desert dotted with many oases. The big powers are interested in Arabia for two reasons—substantial oil deposits exist in several parts of it, and it provides several strategic stations on long airline routes.

Mohammed united all of Arabia in the 7th century and his followers, led by caliphs, founded a great empire with its capital at Medina. Later, the caliphate capital was transferred to Damascus, and then Baghdad, but Arabia retained importance because of the holy cities of Mecca and Medina. In the 16th and 17th centuries, the Turks established at least nominal rule over much of Arabia, and in the middle of the 18th century it was divided into a number of separate principalities.

Through agreements with local rulers, the British extended rule over a good part of the southern and eastern coasts in the 19th century. At the same time, the Wahhabs, a religious sect advocating strict adherence to Mohammed's teachings, placed their rule over most of central and eastern Arabia and their work produced the genesis of the present Saudi Arabia.

Political Divisions of Arabia

Political Division	Area (sq. mi.)	Population (est. 1938)
Aden Colony (British)	80	65,000
*Aden Protectorate	112,000	600,000
*Bahrein Islands (sultanate)	213	89,970†
*Kuwait (sheikhdom)	1,930	50,000
*Oman and Masqat (sultanate)	82,000	500,000
*Qatar (sheikhdom)		
Saudi Arabia (Kingdom)	609,841	5,250,000
Asir	13,857	750,000
Hejaz	182,192	1,500,000
Nejd	413,792	3,000,000
*Trucial Coast (sheikhdom)	**	**
Yemen (Kingdom)	75,000	3,500,000

*British protectorate.

**No reliable data.

†Census 1941.

Saudi Arabia (Kingdom)

This most important state of the peninsula is almost solely the creation of King Ibn-Sa'ud. In 1901 at the age of twenty, he seized the amirate of Riyadh and soon set himself up as the leader of the Arab nationalist movement. On the collapse of Turkey at the end of World War I, he freed the whole peninsula from Turkish rule, and through a series of local military campaigns was able to proclaim himself King of Hejaz and Nejd and dependencies in 1927. His territories became the Kingdom of Saudi Arabia in 1932.

Hejaz and Nejd are under separate administrations. In Nejd, whose capital is Riyadh, Ibn-Sa'ud's rule is absolute. The eldest of his numerous sons, Prince Sa'ud, acts as viceroy in his absence. The constitution of the Hejaz, whose capital is Mecca, provides for a cabinet of ministers

headed by the King's second son, Prince Faisal, who acts as viceroy in his father's absence. There is a consultative legislative assembly in Mecca and various municipal village and tribal councils whose members are named or approved by the King.

The majority of the inhabitants are Bedouin, many of them nomads following their flocks over the desert. There are a few large towns—Mecca, birthplace of the Prophet (80,000), Medina, the tomb of the Prophet (30,000), Jidda, port of Mecca on the Red Sea (40,000), and Riyadh, capital of the Nejd (30,000).

In the Hejaz, Medina produces dates in the oases, and fruit and honey; otherwise, its products are such desert commodities as camels, horses, sheep, hides, charcoal and wool. The most important commercial activity is the annual influx of Moslem pilgrims to Mecca and Medina. The products of Nejd include dates, wheat, barley, hides, wool, fruits, butter, camels and livestock. Oil is produced by an American company, the California-Arabian Standard Oil Company, whose principal field is at Dharan near the Persian Gulf Coast. Estimated production in 1943 was 7,800,000 barrels. The company's expenditures and payroll constitute important invisible exports while the royalties paid to the government have greatly strengthened its financial condition. Imports including coffee, motor vehicles, rice, sugar and tea amounted to \$9,000,000 in 1938. There is a heavy import balance.

There are no railroads and few motorable roads. Camel transportation still holds its own in most of the country. The monetary unit is the riyal at par with the Indian rupee.

Kuwait (Sheikdom)

Kuwait, on the northwestern shore of the Persian Gulf, is an independent state ruled by Sheikh Sir Ahmed al Jabir al-Subah. British protection, first given in 1898, has several times prevented it from being absorbed by Saudi Arabia. The territory surrounding Kuwait, its port, is largely desert; and its economy depends entirely on the sea, and trade which consists of exchanging Arab goods from the interior for textiles, rice, sugar and other necessities. Imports in 1938 totaled \$2,004,322 and exports, \$848,962. Petroleum is also produced.

Oman and Masqat (Sultanate)

Occupying the mountainous southeastern part of the peninsula, Oman is nominally an independent state under the rule of Sir Saiyid Sa'id bin Taimur. It has been under British protection since early in the 19th century. The state is best known for its date cultivation which has reached a high level in the interior. Its riding camels

are considered the best in the world. Exports in 1939 were \$1,108,836 and imports, \$1,622,748. Chief exports are dates, pomegranates and dried fish. Trade is mainly to and from India. The capital, Masqat (population 4,200) which commands the entrance to the Persian Gulf, is inhabited largely by Baluchis and Negroes.

Qatar (Sheikdom)

Qatar occupies the whole of the Qatar peninsula on the Persian Gulf. It is ruled, under British protection, by Sheikh Abdullah ibn Jasmil al Thani. The whole area is claimed by Saudi Arabia. Oil deposits have been located there.

Trucial Coast (Sheikdoms)

The area extending along the Gulf of Oman and Persian Gulf is ruled by 7 semi-independent sheikhs. Treaties signed with Britain in 1853 and 1892 provide that the sheikhs will not enter into agreements with or cede or sell any part of their land to any other power.

Yemen (Kingdom)

The Yemen, an independent country under the rule of the Imam Yahia, occupies the southwestern extremity of the peninsula. Its independent status was confirmed by the Treaty of Sana with Britain and India (February 11, 1934) and the Treaty of Taif concluded with Saudi Arabia at the cessation of hostilities between the two states on May 13, 1934. The people are permanently settled and are for the most part engaged in agriculture, fishing and trade. Chief products are Mocha coffee, sheep and goat skins. Much of the trade goes through the port of Aden. The capital and principal town, Sana (population about 25,000), is located in mountains rising to over 12,000 feet.

Argentina (Republic)

(República Argentina)

Area: 1,079,965 square miles.

Population (est. 1945): 14,130,871.

Density per square mile: 13.08.

President: Brig. Gen. Juan D. Perón.

Principal cities: Buenos Aires, 2,485,355 (capital and chief port); Rosario, 521,210 (flour milling); Avellaneda, 399,021 (industrial suburb of Buenos Aires); Córdoba, 339,021 (north west farming center); La Plata, 256,378 (sea-port; meat packing); Tucumán, 169,566 (sugar cane).

Monetary unit: Peso.

Racial stock (est. 1939): White, 88%; Mestizo, 10%; Indian, 2%.

Languages: Spanish (official), Italian.

Religion: Roman Catholic.

When Argentina achieved unification in 1853, it patterned its government on the U. S. Constitution but today Argentina is regarded as a problem child of the Americas.

Discovered in 1516 by the Spaniard Juan Díaz de Solís, Argentina developed slowly under Spanish colonial rule. Its now great cattle industry was first important as a source of supply for the Peruvian mining centers. Buenos Aires, now the third largest city of the Americas, was founded and then abandoned in 1536, and not re-founded until 1580. Its inhabitants repulsed invading British forces in 1807 and when Napoleon captured the King of Spain, the Argentinians set up their own government in the king's name in 1810. On July 9, 1816, independence was formally declared. Internal dissension, particularly between Buenos Aires and the provinces, was put down under the dictator Juan Manuel de Rosas who brought about unification in the years from 1829 to 1852. Juste José de Urquiza, whose forces had ousted de Rosas, was the first president under the 1853 constitution.

Argentina made great material progress under Presidents Domingo Faustino Sarmiento, 1868-74; Nicolas Avellaneda, 1874-80; and particularly under Julio A. Roca, 1880-86. During Roca's second term, 1898-1904, two border disputes with Chile were settled, one by the U. S. minister in Buenos Aires, the other by King Edward VII of England. Introduction of the secret ballot in 1910 by President Roque Saenz Pena was followed by the 1916 defeat of his Conservatives after thirty years of power.

President Hipolito Irigoyen, 1916-22, refused to abandon Argentinian neutrality in World War I. Re-elected in 1928, Irigoyen, a Radical, was ousted by a Conservative revolution led by General José Felix Uriburu. His successor, General Agustin Justo, 1932-38, followed a moderate policy, while under the leadership of a former Radical, Roberto M. Ortiz, Argentina again proclaimed neutrality but in general co-operated in hemisphere defense problems.

Illness of Ortiz passed the presidency in June, 1940, to a Conservative, Ramon Castillo, whose regime was toppled in June of 1943 by a revolt led by General Pedro P. Ramirez. He immediately abolished all political parties and broke relations with the Axis on Jan. 26, 1944, after disclosures of German spy activity in Argentina. A clique of army officers, apparently fearing that this would lead to war with Germany, replaced Ramirez on Feb. 24, 1944, with General Edelmiro Farrell.

In Farrell's regime, which was embarrassed by diplomatic non-recognition, Colonel Juan D. Perón soon emerged as the strong man. Striving to win recognition,

the government made an eleventh-hour declaration of war against the Axis on March 27, 1945, and signed the Act of Chapultepec on April 4, 1945. Recognition by the United States came five days later. The elections of Feb. 24, 1946, gave overwhelming victory to Perón whose inauguration as president on June 4, 1946, was followed in two days by establishment of diplomatic relations with Russia which, up to that time, had loudly denounced the Argentine regime as Fascist and pro-Nazi. **GOVERNMENT.** A federal union of fourteen provinces and nine territories, Argentina normally elects every six years a president and vice-president, chosen by electors who are elected by direct male suffrage. The president is assisted by a cabinet of ministers appointed by him. The vice-president presides over the Senate but has no other powers. Neither are eligible for immediate re-election. The national congress has two houses—the thirty-member Senate elected by the provincial legislatures for nine-year terms, and the 158-member Chamber of Deputies popularly elected for four years.

PROVINCIAL. While each province has its own constitution, elected governor, legislature and judiciary, the president may intervene in crisis and take over the local government. The Federal District (City of Buenos Aires) has a locally-elected municipal council but the mayor is named by the president, as are the territorial officials.

JUDICIARY. The president, with Senate approval, appoints for life-terms the judges of the federal supreme court, five courts of appeal, and district courts (at least one in each province). The federal courts handle cases of national character, and those in which different provinces, or residents of different provinces, are concerned.

DEFENSE. Military training is compulsory at twenty for one year, after which the men pass to the reserves until their forty-fifth year. Army strength in 1940 was 49,705 with 282,503 reserves. Much of Argentina's military equipment is obsolete. Because of its attitude during most of World War II, it was never given any U. S. military lend-lease goods and was the only Latin American nation so deprived. The air force in 1940 counted 2,023 men and 200 planes. The navy on Jan. 1, 1946 had about 15,000 men, two old but modernized battleships, three modern light cruisers, eleven modern destroyers, three modern submarines, four old coast defense ships and fourteen minesweepers.

EDUCATION. Argentina's estimated illiteracy rate of 15 percent is the lowest in all Latin America. Education is free, secular and compulsory between six and fourteen. Enrollment in 1943 was put at 1,928,343 in 13,968 primary schools, 135,456 in 718 intermediate schools, and 37,586 in six uni-

versities, of which the most important is that of Buenos Aires.

PUBLISHING. Argentina is the center of publishing and printing for the Spanish-speaking countries of the western hemisphere. In 1935 there were 844 dailies, periodicals and reviews. The Buenos Aires daily, *La Prensa*, is considered one of the world's greatest newspapers, followed closely by *La Nacion*.

RELIGION. The predominant religion is Roman Catholicism which is supported by the State. There are two cardinals; one, Antonio Cardinal Gaggiano, was invested at the last papal consistory.

RACIAL STOCK. There is less admixture of non-white blood in Argentina than in any other American nation except Canada and possibly Uruguay. The basic racial stock, Spanish Creole, was tempered by a great influx of European immigrants which began about 1850 and reached its peak in 1910. Immigration from 1857 to 1937 totaled 3,435,477, of whom 43.5% were Italian, 27% Spanish, 4% French, 2.5% German and 2% Russian. The native Indians, living mostly in the northern territories, are dying out; there are almost no Negroes. The birth rate (1936-38 annual average: 24.2; 1943: about 23.0) is low for Latin America as is the death rate (1936-38 annual average: 11.9; 1943: about 9.9).

AGRICULTURE. A farming and stock-raising nation, Argentina devotes 44 percent of its total area to pasture and 11 percent to cultivation. More than 60 percent of cultivated land is planted in cereals—wheat, corn, linseed and oats. About 20 percent is in alfalfa for stock feed. Cotton, sugar cane and fruits are important and Argentina is the world's largest producer of yerba mate (Paraguay tea), the national beverage. The 1945 wine production of 191,000,000 gallons was about 20 percent below normal.

MAJOR AGRICULTURAL CROPS BY ACREAGE AND VOLUME, 1943

Crop	Acres	Tons
Wheat	16,563,442	7,054,720
Corn	10,127,000	2,138,462
Linseed	6,213,285	1,681,008
Potatoes	479,180	1,137,290
Oats	3,616,964	639,334
Barley	1,887,080	385,805
Sunflower Seeds	1,664,780	380,294
Rye	2,484,573	163,345

There were in 1942 a total of 50,902,000 sheep, 6,767,000 horses, 2,838,000 goats, 509,000 mules and asses, and in 1945, 34,010,000 cattle and 8,010,000 hogs. Cattle raising predominates on the pampas, especially in Buenos Aires province. Sheep raising is more important in Patagonia. Livestock slaughtered in 1943 included cattle, 6,697,921; sheep, 11,900,370; and

hogs, 3,500,292. The 1945 wool clip was estimated at 518,000,000 lbs. Cattle hide and kips exports in 1944 were 5,119,000 (50% to Britain) and (Jan.-Nov. 1945), 3,972,000 (70% to Britain). Gross value of agricultural production in 1943 was 1,600 million pesos, of livestock production 1,750 million pesos.

MANUFACTURING. Industrial expansion was accelerated during World War II by the shortage of imports, but industry is still closely allied to agriculture. The principal industry is meat refrigeration, followed by flour milling, textiles, sugar refining, dairy products, quebracho extraction, and wine. There were in 1941, 57,940 industrial establishments with 852,154 workers and products valued at 6,337 million pesos (7,800 million in 1943). Most of the meat packing plants are controlled by U. S. and British interests.

TRADE. Foreign trade during World War II was notable for low-volume imports and low-quantity but high-value exports.

Value of trade for three years in paper pesos:

Year	Imports	Exports
1943	942,048,436	2,192,264,055
1944	1,007,154,000	2,352,881,000
1945	693,800,000*	1,737,200,000†

*January-August.

†January-September.

Meat exports constituted about one third of all 1944 exports in value, followed by wheat, hides and skins, wool, and forest products. Exports went principally to Britain (37%), United States (22%), Brazil (9%), Spain, South Africa, Peru and Switzerland. Sources of imports were Brazil (34%), United States (15%), United Kingdom (8%), Sweden, India, Chile, Switzerland and Spain. The leading imports were textiles, chemical products, fuels and lubricants, foodstuffs, and machinery.

COMMUNICATIONS. Arrivals of sea-going vessels in 1944 totaled 1,485 with a tonnage of 3,324,407. The merchant fleet in 1943 consisted of 4,079 ships of 455,807 tons, about 35% of which was government-owned. The chief ports are: Buenos Aires, second only to New York in the western hemisphere, and La Plata, both on the Plata estuary; and Rosario, a port on the Paraná River.

Railway mileage in 1945 was 28,775, nearly all of which radiates outward from Buenos Aires. A large percentage of the railroads are British-owned, but the government which already owns one third of the mileage is pursuing a policy of eventual nationalization. Highway mileage in 1945 was estimated at 253,115 miles, largely unimproved. Telephones in 1945 totaled 493,055; broadcasting stations 55; and wireless sets 1,250,000. Five principal air-

lines are in operation and extend as far south as Tierra del Fuego. Direct international connections exist with neighboring countries.

FINANCE. The ordinary budget in 1945 balanced at 1,413,355,000 pesos. The national internal debt (June 30, 1945) was 8,941,000,000 pesos (1944: 7,673,000,000 pesos), while the external debt was 11,100,000 pesos in pounds, 144,300,000 pesos in dollars, and 83,400,000 pesos in Swiss francs. British investments in 1944 were \$371,998,509, with about 75% in railways. U. S. investments in government obligations in 1943 were \$310,596,310, while direct investments in industry in 1940 were \$387,945,000.

TOPOGRAPHY. Second in South America to Brazil in size and population, Argentina is about 2,070 miles long and 860 miles wide at the maximum. In general, the country is a plain, rising westward from the Atlantic to the Chilean border and the towering Andes peaks, including Aconcagua, 23,080 feet high, the highest peak in the world outside of Asia. In all, twenty of South America's thirty-two tallest mountains, all over 20,000 feet, are wholly or partly in Argentina. The northern area of the Argentine plain is the swampy and partly wooded Gran Chaco. South of that to the Rio Negro is the rolling, fertile Pampas, rich for agriculture and grazing, and supporting most of Argentina's population. Next southward is Patagonia—a region of cool, arid steppes with some wooded and fertile sections. The eastern part of Tierra del Fuego, the island southern tip of South America, belongs to Argentina.

CLIMATE. Except for the northern Gran Chaco which has mild winters and torrid summers, Argentina lies in the south temperate zone. The Pampas has an average temperature of 60 degrees and freezing is rare. Temperature extremes increase progressively southward. All over Argentina, January is the warmest month and June and July, the coolest months. The heaviest rainfall, over sixty inches a year, hits the Gran Chaco, while on the Pampas it ranges from twenty in the west to forty inches in the northeast.

RIVERS. The three great rivers forming the Plata system—the Paraná, Paraguay and Uruguay—are extremely important commercial arteries in northern Argentina. Rosario and Santa Fé, 260 and 360 miles respectively, above Buenos Aires on the Paraná, are accessible to ocean vessels. Many other river ports lie along the total navigable length of 1,997 miles of the three streams.

MINERALS. Argentina must import most of nearly every mineral it uses. Some oil is produced in Patagonia, and there is small mining of tungsten, lead, gold, zinc,

tin, silver and beryllium. All mineral production in 1942 was valued at 214,300,730 pesos, of which oil accounted for more than 60 percent.

FORESTS, FISHERIES. Forests cover 123,-550,000 acres, 17.9 percent of Argentina, largely in the north central part where the Gran Chaco area is the world's chief source of quebracho extract. Total production of this tanning agent obtained from quebracho logs was, in 1943, 162,722 tons, of which 144,504 tons were exported. Other forest products—hardwoods, dyewoods, lignum-vitae, red quebracho, medicinal gums and other tannins—are consumed locally for the most part. Argentina's coastal waters abound in fish, but the sea food industry is so little organized that tons of fish are imported from Uruguay, Chile and Brazil.

Austria (Republic)

(Österreich)

Area: 34,062 square miles.

Population (census 1939): 6,694,782.

Density per square mile: 196.6.

Allied Council: General Mark W. Clark (U. S. A.); Marshal of the Soviet Union Ivan S. Konev (U. S. S. R.); Lt. Gen. Sir Richard McCreery (United Kingdom); Lt. Gen. Emile-Marie Bethouart (France).

Principal cities (census 1939): Vienna, 1,920,-390 (capital, industrial center); Graz, 207,867 (industrial center); Linz, 128,006 (Danube port); Innsbruck, 78,523 (Tyrolean tourist center).

Monetary unit: Schilling.

Racial stock: Austrian.

Language: German.

Religions (est.): Roman Catholic, 93.68%; Protestant, 3.11%; Jewish, 2.93%.

HISTORY. The history of Austria before 1918 is largely that of the Austro-Hungarian Empire and the Hapsburg dynasty. Its origin was in the province of Ostmark, separated from Bavaria and given to Leopold of Babenberg (976 A. D.) by the Holy Roman Emperor, Otto II. It was under the Babenbergs until 1246 when it passed to Ottokar of Bohemia who lost it to Rudolf of Hapsburg (1278). The Hapsburgs gradually added, through marriage and treaty, the Netherlands (1477), Bohemia, and Hungary (1526). A large part of Italy was won (1714), but Silesia was lost to Prussia during the rule of Maria Theresa (1740-80). Emperor Francis I laid down the Holy Roman crown in 1806 at the height of the Napoleonic Wars, in which Austria with her allies was finally victorious. Supremacy in Germany was lost through defeat by Prussia in the Seven Weeks War (1866). In 1867 the Dual Monarchy of Austria and Hungary was established, united in the person of the sovereign, Franz Josef I (1848-1916).

Following the defeat of the Austro-Hungarian armies and the World War I armistice, the republic of Austria was established out of the German-speaking Austrian crownlands but was confined to its present borders by the Treaties of St. Germain (1919) and Trianon (1922). The years immediately following the war were a period of privation, dissension and riots with Austrian currency becoming worthless and the nation, bankrupt. In 1922 the League of Nations excused Austria from further war reparations payments for 20 years. This afforded some relief and a more stable government was set up, although interparty political tension and financial crises continued. Establishment of a fascist form of government by Engelbert Dollfuss, who became Chancellor (1932), was followed by an unsuccessful Socialist revolt (February 1934) and an attempted Nazi coup d'etat, which failed although Dollfuss was killed. He was succeeded by another Clerical, Kurt von Schuschnigg, whose efforts to maintain Austria's independence ended (March 12, 1938) with the bloodless occupation of Austria by German troops. Hitler proclaimed the *Anschluss* of Germany and Austria the next day and Austria, now known as Ostmark, lost its political identity.

Following the liberation of Vienna by the Red Army (April 13, 1945) a coalition (Socialist, Communist, Catholic Parties) government was established under the chancellorship of Dr. Karl Renner, a veteran Socialist. Elections held November 25, 1945 resulted in victory for the People's Party whose leader, Leopold Figl, became chancellor. Dr. Renner was elected president of the Second Austrian republic (December 20, 1945).

ALLIED MILITARY GOVERNMENT. Austria was occupied (1945) by the Soviet Union, the U. S., Britain, and France. An Allied Council was set up to establish the independent government pledged by the U. S., U. S. S. R. and Britain at Moscow in November 1943. The country within its 1937 frontiers was divided into four national zones as was the city of Vienna. The Allied Council and the inter-Allied governing authority of Vienna consisted of the ranking officers of the four participating nations. By an agreement signed by the four powers June 28, 1946, the Council's functions became supervisory rather than administrative, and the Austrian government was given power to promulgate legislation and conclude foreign pacts (other than with the 4 powers), subject only to the unanimous disapproval of the Council.

NATIONAL GOVERNMENT. Austria is a federal republic comprised of nine provinces, each of which has its own elected assembly for the control of regional affairs. The federal parliament consists of two

houses—the *Bundesrat* whose members are nominated by the provincial assemblies and the *Nationalrat* whose 165 members are chosen by national elections. The party standing in the November 25, 1945 elections was as follows: Catholic People's party 84, Socialist 76, Communist 5. The head of state is the president of the republic, elected by parliament in joint session for a six-year term. The government is administered by the chancellor and his cabinet.

Austria has no military or naval forces. The Austrian army was absorbed into the German Wehrmacht at the *Anschluss* and lost its national identity. Allied occupational troops (June, 1946) numbered 245,000 (140,000 Soviet, 37,000 French, 24,000 U. S., 24,000 British), but their numbers were to be gradually reduced.

SOCIAL AND ECONOMIC CONDITIONS.

[Note: Definitive postwar statistics are for the most part unavailable. Pre-*Anschluss* (1937) statistics are the latest available.]

Agriculture employs over one-third of the population but the country is heavily dependent on imported foodstuffs. About 89.5 percent of the total area is classified as productive; of this area 40.9 percent is intensively cultivated as plowland, meadowland gardens and vineyards. The amount under plow is relatively small, and mixed farming predominates. Rye is the leading cereal, followed by oats, wheat, barley and maize. Other crops include hops, grape, flax, fruits and tobacco. The vine, absent only in Salzburg, Tyrol and Upper Austria, reaches its finest quality in the sheltered Rhine Valley and the warm eastern valleys. Average annual wine production (1931-42) was 23,500,000 gallons.

MAJOR AGRICULTURAL CROPS, 1937

Crop	Metric tons
Potatoes	3,612,000
Sugar beets	1,008,000
Rye	476,000
Wheat	400,000
Barley	288,000
Oats	287,000

Stock raising and dairy farming both in the Alpine pastures and the lowlands of the east were of increasing importance prior to World War II. In 1934 Austria had 2,348,600 cattle, 2,823,000 pigs, 263,400 sheep and 261,400 horses. Austrian crop production in 1945 was estimated to be sufficient to meet only 50 percent of her needs.

Austria is primarily an industrial country but facilities have suffered from war damage and from reparation removals from former German-owned plants. Most important are the metallurgical and engineering industries. Styria is responsible for almost all the iron and steel production

(1937: pig iron—389,000 metric tons; steel 650,000 metric tons). The working of timber and its derived products: pulp, cellulose, furniture and musical instruments is second in importance. The textile industry is the basis for a number of finishing trades. Other industries include leather, chemicals and glass manufacture as well as the production of food and drink, which is largely dependent upon imported materials.

Exports (1937) amounted to \$136,000,000 and imports \$162,000,000. The constantly unfavorable prewar balance was offset in part by international loans and in part by invisible exports such as tourist expenditures, income from foreign investments and the large transit trade.

The largest single export was timber and the leading import, live animals and articles of food and drink.

The construction of railways and roads has been hampered by physical difficulties. There are more than 4,000 miles of railway line, partly electrified. Water traffic is restricted for the most part to the Danube River. The major river ports are Linz and, especially, Vienna which is also an important rail, road and air center.

NATURAL FEATURES AND RESOURCES. The republic of Austria covers an area about equal to that of Scotland and includes much of the mountainous territory of the eastern Alps (about 92.3 percent of the country is classified as mountainous). From the Rhine Valley, Austria's western frontier, these ranges cross the country from west to east, merging on the north and northeast into the Danube Valley and the open Vienna basin. On the east and southeast, the ranges merge into the forested foothills overlooking the undulating countryland of western Hungary. The country contains much beautiful scenery, including many snowfields, glaciers and snow-capped peaks. The principal river, the Danube, enters Austria in the northwest and crosses the northern part of the country. There are many beautiful lakes including the Achensee of the Tyrol which lies at a height of 3,000 feet.

Variety is the keynote of the climate and climatic conditions vary considerably within small distances according to the nature of local topography.

Austria possesses valuable mineral resources. In the Eisenerz—Vordernberg Range (Styria) lies one of the largest European deposits of iron ore. Copper is mined in Salzburg, Tyrol and Lower Austria, and lead and zinc at Bleiberg (Carinthia). Other minerals include bauxite, graphite, sulfur and manganese. Fuel resources comprise small coal deposits in lower Austria and large quantities of lignite, found everywhere except in Salzburg. Heavy supplies of coal and coke must be imported,

but extensive water power resources are available for exploitation. With a production of 1,210,000 metric tons of petroleum in 1944, Austria became Europe's third largest producer. Fields are located in the Zistersdorf and Muehlberg areas, both in the Soviet zone.

MAJOR MINERALS, 1937

Mineral	Metric tons
Lignite	3,242,000
Iron ore	1,880,000
Coal	230,000
Lead	8,700

Austrian forests cover 38 percent of the total area and are an important national asset. Prior to World War II, more than 100,000 were directly employed in forestry or sawmills. Over 70 percent of the forest is coniferous in which pine predominates. The annual prewar timber output approached 10,000,000 cubic miles of which about 60 percent was available for export or as the basis of the wood and paper industries.

Belgium (Kingdom)

(Royaume de Belgique—
Koninkrijk België)

Area: 11,775 square miles.

Population (est. 1939): 8,396,276.

Density per square mile: 713.1.

Sovereign: King Leopold III.

Regent: Prince Charles, brother of the King.

Prime Minister: Camille Huysmans.

Principal cities (est. 1939): Antwerp (Anvers), 271,386 (port and commercial center); Bruxelles (Brussels), 189,036 (capital); Gand (Ghent), 162,011 (textiles); Liège, 16,187 (iron and steel).

Monetary unit: Belgian franc.

Racial stock: Walloon; Flemish.

Languages: French, Flemish.

Religion: Predominantly Roman Catholic.

In 1914 and again in 1940, Belgium was crushed by German armies because its position in the Low Country area made it a highway on the invasion route to France. Highly industrialized, a bit larger than Maryland, Belgium emerged from World War II in fair economic condition but, politically, the country suffered crisis after crisis in the struggle between conservatives and elements of the left. Bound up in this was the conflict between those who supported King Leopold III and those who argued that the monarch had been at least afraid of the Nazis and perhaps even a collaborator during the German occupation.

CONQUERED BY CAESAR. Perhaps the first mention of the Belgians in history

came in 57 B. C. when they were conquered by Julius Caesar. In the Middle Ages the Belgian towns became wealthy and virtually autonomous as great textile centers. Belgium became part of Burgundy in 1385; and later, part of the Spanish domains under Charles V. By the Treaty of Utrecht, in 1713, Belgium went to Austria, though retaining autonomy, and from 1792 to 1815 it held the same status under France. Shoved into the Kingdom of the United Netherlands by the Congress of Vienna in 1815, the Belgians revolted and proclaimed independence on Oct. 4, 1830, choosing as their sovereign Prince Leopold of Saxe-Coburg. He became King Leopold I, 1831 to 1865.

Recognized as independent and with a guaranteed neutrality by the Treaty of London in 1839, Belgium progressed peaceably in the 19th Century under Leopold I, and his son, Leopold II, who reigned from 1865 to 1909, and was succeeded by his nephew, Albert I—1909-34.

Despite heroic Belgian Army resistance under the personal leadership of Albert, the country was overrun by the Germans in 1914 and occupied throughout World War I. The peace settlement in 1919 gave Belgium the regions of Moresnet, Eupen and Malmedy, and a mandate over Ruanda-Urundi in Africa. Between the wars the country devoted itself to reconstruction and the quest for financial stability.

LEOPOLD III. King Leopold III, who succeeded his father in 1934, ordered the Belgians to surrender to the Nazis and was taken prisoner, himself, on May 28, 1940—eighteen days after the German attack on the Low Countries. From the point of view of Belgium alone, his action was regarded as perhaps sensible, but the abrupt demise of Belgian resistance hurt Allied strategy and contributed to the entrapment of the British at Dunkirk. The Pierlot cabinet escaped from the country and set up a government-in-exile in London. When that government returned to Belgium on Sept. 7, 1944, King Leopold's brother, Prince Charles, was elected Regent and the the Catholic premier, Hubert Pierlot, became head of a coalition government. He was succeeded in February, 1945 by Achille van Acker, a Socialist, whose principal problem aside from reconstruction was the status of Leopold.

A Liberal-Socialist-Communist coalition opposed the return of Leopold from Switzerland, where he had gone to await the determination of his future. Among the accusations against him were that he let the Allies down by quick surrender in 1940, that he had refused to leave the country to lead a government-in-exile, that he had willingly accepted the protection and comfort of the Nazis during occupation.

The Christian Socialists (Catholics) won a plurality in the elections of Feb. 17, 1946, but their pro-Leopold stand blocked formation of a cabinet. Paul-Henri Spaak made two unsuccessful attempts to set up a cabinet, after which van Acker finally formed a government on March 31 without Catholic participation. On July 9, van Acker lost on a vote of confidence and had to resign. Camille Huysmans, the seventy-five-year-old Mayor of Antwerp, managed on Aug. 2 to form a new cabinet but it was regarded as merely a stop-gap until the October communal elections.

King Leopold III was born in 1901, son of King Albert I and Princess Elizabeth of Bavarie, and married Princess Astrid of Sweden in 1926. They had three children: Josephine Charlotte, born in 1927; Prince Baudouin, 1930; and Prince Albert, 1934. Astrid was killed in 1935 in a motor crash in Switzerland and a year after, King Albert I was killed in a mountain-climbing fall near Namur. On Sept. 11, 1941, while he was a German prisoner, Leopold married a commoner, Marie Lillian Baelis, daughter of a former cabinet member. She renounced the title of queen upon marriage, and became Princess de Rethy. Leopold's brother, and regent, is Prince Charles, Count of Flanders, who was born in 1903. His sister is Marie-Jose, born in 1906, wife of former King Umberto II of Italy.

GOVERNMENT. Under the 1831 constitution, Belgium is a constitutional, hereditary monarchy. The king's authority is delegated to the ministers whom he appoints and dismisses to conform with the parliamentary majority. The ministers who constitute the cabinet must have the confidence of the parliament, consisting of a 202-member chamber of deputies popularly elected, and a senate of varying strength (167 in 1946) elected both directly and indirectly. All members serve for four years unless one or both houses are dissolved by the king, in which case new elections must be held in forty days. Belgium's nine provinces and 2,670 communes have crown-appointed officials but retain considerable autonomy with locally-elected councils.

Judges are appointed for life. The highest appellate court is the Cour de Cassation at Brussels; there are three regional courts of appeal.

DEFENSE. Military service in 1939 was compulsory; the initial training period was 1 year. The partially mobilized Belgian army in 1939 had 600,000 men and 242,000 reserves; and the air force, 7,500 men and 350 planes. Belgian units fought with the British army, Royal Navy, and RAF during World War II. The armed forces are under the minister of national defense in peacetime; the king takes personal command in wartime. The navy, abolished in 1928, is

now being reformed, with a contemplated force of 2 or 3 frigates, 8 minesweepers, and 12 fast launches.

EDUCATION. Education, free and universal for children from six to fourteen, is under state control in three divisions: primary, intermediate and higher. Primary schools in 1938 numbered 8,712 with 955,038 students; intermediate schools, 273 with 86,279 students; universities 4 (official, Gand [Ghent] and Liège; unofficial, Bruxelles [Brussels] and Louvain) with 10,776 students. There are also numerous private (unofficial) schools, largely under religious auspices.

RACIAL STOCK AND POPULATION. Flemish, a Germanic tongue, is spoken in the provinces of west and east Flanders, Antwerp, Limbourg, and the northern half of Brabant, while French and its Walloon *patois* are spoken in the southern half of the country. Both languages are now official. The Belgian people are similarly divided racially, and the problem of Flemish nationalism has always been an important one. Foreigners in 1938 were estimated at 339,799, mostly Dutch, French, Polish and Italian.

AGRICULTURE. Of Belgium's approximately 7,550,000 acres, about three-fifths was under cultivation in 1938, with 32 percent of the cultivated area devoted to cereals, 50 percent to forage, and 13 percent to root crops. Principal crops in 1939 in tons, were potatoes, 3,663,163; sugar beets, 1,840,069; grass (for hay), 962,859; oats, 798,286; rye, 385,144; wheat, 384,703; chicory, 194,115; and barley, 56,327. Beet sugar production was 194,115 tons. Other crops were fodder beets, root crops, flax and garden fruits. The pastoral industry, especially dairy farming, also flourishes; the livestock census in 1941 showed 1,817,965 cattle, 4,408,367 poultry, and 629,336 swine. Butter production in 1939 was 67,240 short tons. Crop conditions in 1945 were less favorable than for the past several years. Total crop production was 15 percent to 20 percent below prewar levels, and livestock production was only 50 percent of prewar figures.

MANUFACTURING. Belgium is one of the most highly industrialized nations in Europe, largely because of vast, readily accessible coal reserves. Industry has not advanced at the expense of agriculture. The Belgian economy is based on both. According to the last industrial census, in 1930, there were 220,871 industrial establishments with 1,938,000 workers (almost 25 percent of the population), lead by the metal industry, 21,817 plants and 356,246 workers; the textile industry, 10,775 plants and 256,705 workers; and the building and construction industry, 37,218 establishments and 209,988 workers. Production of pig iron and ferroalloys in 1939 was 3,371,936 tons and of steel, 3,421,539 short tons.

Associated with iron and steel in a considerable engineering industry, shipbuilding in Antwerp, and machinery and railway stock in Bruxelles. The centuries-old textile industry produces linen (Courtrai); cotton (in the southeast); and artificial silk (1939 output: 6,504 tons). Antwerp, handling the output of mines in the Congo and Angola, rivals Amsterdam in diamond cutting. Other industrial pursuits are matches, glassware, brewing (1,274 breweries in 1936), sugar beet refining, and food processing.

TRADE. Exports in 1939, including Luxembourg, totaled \$3,636,616,000; imports, \$3,318,159,000. The major exports, by percentage, were: textiles 11.1, chemical and pharmaceutical products 7.2, machinery 5.3, precious stones 4.9, wrought iron 4.7, wool 4.2, copper (crude) 4 and coal 3.8; the major customers (1938), also by percentage, were: France 15.5, Britain 13.7, Germany 12.2, Netherlands 12 and the United States 6.6. The major imports (1939) by percentage, were: machinery 5.3, wheat 5, precious stones 4.6, chemical and pharmaceutical products 4.6, copper 4.5 and wool 4; the major suppliers (1938) also by percentage, were: France 14.4, Germany 11.2, United States 11, Netherlands 9, and the Belgian Congo 8.13. There is a considerable transit trade to central Europe, passing chiefly through Antwerp.

COMMUNICATIONS. Inland transportation facilities are highly developed. Railways in 1938 with a mileage of 7,068 carried 95,555,065 tons of cargo. Navigable waterways, totaling 998 mi. including the well-developed canal system, carried 37,478,200 tons, while the Antwerp River, including the Antwerp Canal, carried 9,922,145 tons. Before the war Belgium had the second largest river fleet on the Rhine. In 1938 almost 25,000,000 tons of shipping entered the chief port, Antwerp. Highway mileage in 1938 totaled 6,560, mostly improved. The Belgian merchant fleet in 1939 totaled 200 ships of 408,418 tons; wartime losses totaled 313,000 tons in compensation for which Belgium received 8 ships of 11,195 tons from 689,286 tons of German shipping divided among the Allies. There were 1,120,402 radio sets, 17 broadcasting stations, and 430,000 telephones in 1939.

FINANCE. Revenues in 1939 were \$1,976,655,340; expenditures, \$2,223,671,956. The public debt on Mar. 31, 1945 was 196,382,000,000 francs. Gold reserves in 1944 were \$732,350,400. U. S. investments in 1939 were \$220,000,000. Under lend-lease Belgium was the only country in Europe to give far more than it received; \$165,000,000 of goods and services were supplied to the U. S. against \$82,884,000 received.

NATURAL FEATURES AND RESOURCES. The northern third of Belgium is a plain extending eastward from the coast of the

North Sea. Between that and the Sambre-Meuse Rivers is a low plateau, varying from 240 to 600 feet in height, and to the south lies the Ardennes plateau, rising to a maximum of 2,000 feet. The shallowness of the North Sea off Belgium precludes good harbors; and some of the port advantages of Antwerp on the Scheldt River, are offset by the fact that approaches to it are through Dutch territory. The Meuse and the Sambre which join at Namur, and the Scheldt, all rise in France.

Belgium's temperate climate is varied by terrain and proximity to the sea. Ostend, on the sea, has an average temperature of 49 degrees and annual rainfall of 27.5 inches, about like Chicago. Baraque Michel, in the Ardennes heights, has average temperature of 43 degrees and rainfall of 59.5 inches, and considerable snow in the winter.

The principal mineral is coal—1939 production, 32,900,348 tons. The Ardennes coalfield, now approaching exhaustion, extends southward into France. The Campine field, comparatively new, lies in the northeast. Iron ore, lead and zinc also are mined, principally in the Ardennes. Belgian mining, highly developed, employs almost 200,000 people.

Forests cover about 20 percent of Belgium but their products are relatively unimportant. Fishing is vital in the national economy. The 1938 catch totaled 43,139 tons valued at \$21,012,588. Sole, shellfish and cod were the leaders.

BELGIAN COLONIAL EMPIRE

Country	Area (sq. mi.)	Population
Belgian Congo	902,274	10,538,000*
Ruanda-Urundi	21,200	3,833,865†

*1942. †1943.

BELGIAN CONGO (CONGO BELGE).

Status: Colony. *Capital:* Leopoldville (population 1938: 35,946). *Governor general:* Pierre Ryckmans. *Foreign trade* (1943): exports, 4,609,725,000 francs; imports, 2,289,475,000 francs. *Agricultural products:* cotton (1943: 47,399 tons); coffee (1942: 36,376 tons); sugar (1943: 15,983 tons). *Minerals:* coal (1943: 23,700,000 metric tons); copper (1944: 163,300 metric tons); diamonds, mainly industrial (1944: 7,540,000 carats); gold (1943: 453,000 fine oz.); manganese ore (1943: 17,400 metric tons); silver (1943: 3,250,000 fine oz.); tin (1944: 5,400 metric tons); zinc (1943: 40,870 metric tons). *Forest products* (1943, in short tons): palm oil, 110,230; palm kernels, 98,105; rubber, 13,228; gum-copal, 17,337. *Communications* (1943): Railroads, 4,053 mi., roads 55,307 mi., navigable waterways 7,320 mi., internal air lines, about 5,500 mi.

The mineral-rich Belgian Congo, in central Africa, with a narrow outlet to the

Atlantic through Portuguese Angola, was acquired Nov. 15, 1908 by the Belgian state from the Belgian king, Leopold II. The latter had backed exploration of the area by the English explorer, Stanley, and in 1885 had been recognized by the great powers as personal sovereign and proprietor of the Congo Free State, as it was then called. The area is now administered by a governor-general appointed by the king and responsible to the cabinet minister for the colonies. The governor-general has unrestricted executive and legislative powers and the colony has no representative institutions of its own. During World War II it furnished many vital war materials to the United Nations. The European population in 1942 was 30,000.

RUANDA-URUNDI. *Status:* Mandate united administratively with the Belgian Congo. *Capital:* Usumbura. *Governor general:* Pierre Ryckmans. *Foreign trade* (1943): exports, 228,728,000 francs; imports, 136,776,000 francs. *Principal products:* tin, coffee, gold, cotton, hides and pelts.

The area, lying in east Africa, was assigned to Belgium as a mandate by the League of Nations at the end of World War I, before which it was a portion of German East Africa. It is administered under the direction of the governor-general of the Belgian Congo by a vice governor-general. The mandate is largely mountainous with livestock grazing the principal pursuit of the natives. There were in 1943 2,167 Europeans and 1,597 Asiatics.

Bolivia (Republic)

(República Boliviana)

Area: 416,040 square miles.

Population (est. 1944): 3,533,900.

Density per square mile: 8.6.

President: Tomas Bonje Gutierrez.

Principal cities (est. 1944): La Paz, 310,000 (de facto capital); Cochabamba, 60,000 (commercial center); Oruro, 50,000 (tin mines); Potosí, 40,000 (mining); Sucre, 30,000 (legal capital).

Monetary unit: Boliviano.

Racial stock (estimate 1940): Indian, 52.34%; Mixed, 27.5%; White, 13.08%; Negro, 0.22%; Unspecified, 6.85%.

Language: Spanish.

Religion: Roman Catholic.

Three and four hundred years ago, Bolivia's rich mines were the main source of Spain's mineral wealth in South America. In World War II in modern times, Bolivian tin sent to the United States and Britain helped save the day for the United Nations after the Japanese overran the normal tin sources of Malaya and the Dutch East Indies. The fifth largest nation of South America, and one of the only two that is

landlocked, Bolivia presents a political history that is outstandingly stormy even in a continent of traditional preference for bullet over ballot. Since 1825 it has had more than sixty revolutions, seventy presidents and eleven constitutions.

Part of the ancient Incan empire, Bolivia was conquered in 1533 by Gonzalo Pizarro, younger brother of Francisco Pizarro, nemesis of the Incans. Bolivia was called Upper Peru until 1825 when independence was won after the defeat of Spanish forces at Potosi by liberating Colombians under General Antonio José de Sucre, lieutenant of Simon Bolivar. The country was then named after Bolivar, and the capital was named Sucre. Today, though Sucre is still the legal capital, the actual capital is La Paz.

Harassed by political insecurity, Bolivia lost great slices of territory to three neighbor nations. Several thousand square miles and its outlet to the Pacific were taken by Chile after a disastrous war in 1879-83. In 1903 a piece of Bolivia's Acre province was ceded to Brazil. And in 1935, at the end of a war with Paraguay, Bolivia gave up claim to nearly 100,000 square miles of the Gran Chaco.

Stormy in politics, the period since 1934 is typical of Bolivian political history. In that year Daniel Salamanca, the president, was overthrown by a clique under Luis Tejada Sarzano, vice president, who was toppled two years later by Colonel David Toro. Lieutenant Colonel German Busch sprang a coup in 1937 and seized the government. When he committed suicide two years after that, he was succeeded in disregard of the constitution by Carlos Quin-tanilla, defense minister. General Enrique Penaranda, legally elected in March, 1940, succumbed in 1943 to the rightest revolution headed by Major Gualberto Villarroel who then remained in office through political fraud, violence and terror. The end for him came on July 21, 1946, when he was killed in a bloody revolution of students and workers, who established a provisional government. No elected Bolivian president has ever served out his term.

Under a 1938 constitution, Bolivia is a republic electing by popular vote a president every four years, a 27-member Senate every six years, and a 70-member Chamber of Deputies every four years. The president appoints the eleven members of his cabinet, also the officials of the eight departments and three territories. The Supreme Court judges, chosen by two-thirds vote of the two houses of Congress, select the district court judges. Today the Supreme Court is about the only government agency left in the original capital at Sucre, all other functions having been moved to La Paz.

Military service is compulsory, with a two-year training period beginning at nine-

teen and service on reserve until fifty. The army is fixed by law at 15,000, and in 1939 the reserves numbered 82,187. The air force is being re-organized and trained by American officers. In 1945 the armed forces national budget share came to about 20 percent. Receipt of U. S. lend-lease military goods in 1941-45 totaled \$4,392,000.

Bolivia has an illiteracy rate estimated in 1945 at 80 percent, highest rate in all Latin America. A contributing factor is the high rate of pure Indian population. In 1942 enrollment at 1,766 primary schools was 160,283, and at seventy-seven intermediate schools, 1,255. There are five universities and several normal schools and educational centers for Indians.

Roman Catholicism is the state religion, but there is complete freedom of worship. The religious orders, never suppressed, maintain several convents. Spanish is the official language, but many Indian dialects are spoken. The country is dominated by the 450,000 white descendants of the early Spanish settlers. Broadly speaking, the whites are landowners and government officials; the mestizos are tradesmen, skilled workers, and minor civil officials; and the Indian majority, laborers. Recent government efforts to encourage immigration have been generally unsuccessful, although small settlements of Czechs, Germans and others have been established in the eastern territories.

Landlocked Bolivia is a low alluvial plain in 60 percent of its area toward the east, drained by the Amazon and Plata river systems. The western part, enclosed by two chains of the Andes, is a great plateau measuring 500 by 80 miles at an average altitude of 12,000 feet. More than 80 percent of the population is found on the plateau, which also contains La Paz, the highest seat of government in the world. Lake Titicaca, half the size of Lake Ontario, is the highest big lake in the world, at an altitude of 12,507 feet. Islands in the lake hold ruins of the ancient Incan civilization.

Bolivian climate ranges from the moist heat of the equatorial lowlands of the east to the Arctic cold of the snow-capped Andes. A dozen peaks 20,000 feet or higher lie all or partly in the country.

Mining is the backbone of the economy. From the mountain of Potosi alone an estimated \$2,000,000,000 worth of silver has been dug since colonial times. Tin, accounting for 70 percent of exports, is by far the most important today, most of it coming from the plateau regions of Potosi and Oruro. In World War II Bolivia stepped up production greatly, shipping out vast quantities of barrilla, an ore mechanically concentrated to yield 60 percent tin. In normal times, Bolivia is the world's third tin producer.

Mineral production for 1944 was: tin, 89,300 metric tons; silver, 6,800,000 ounces; gold, 5,000 ounces; copper, 6,200 metric tons; lead, 9,000 metric tons; antimony, 3,800 metric tons; tungsten concentrates, 7,900 metric tons; and zinc, 18,300 tons. Southern Bolivia is rich in oil, as yet relatively unexploited. Production in 1944 was 813,947 barrels.

The 5,000,000 acres under cultivation produce wheat, rice, sugar, potatoes, cacao, barley, maize, coca (source of cocaine), tobacco, and cotton. Cattle are raised in the more temperate regions of the east and south, sheep in La Paz and Cochabamba, and llamas, alpacas, and vicuñas, important sources of hides, wool and meat, are raised on the plateaus by Indians whose economy is largely dependent upon them. The fur-bearing chinchilla, a native of the higher plateau, is also bred.

Manufacturing received considerable impetus during the Chaco War, but the output is in no way sufficient to supply the domestic demand. Almost three-fourths of the manufacturing is carried on in La Paz. Major manufactures in 1941 had a value of \$11,298,280, led by foodstuffs, beverages, and textiles.

Imports in 1943 were 146,130,745 bolivianos and exports, 283,155,361 bolivianos. The principal supplier was Argentina, followed by the United States and Peru. Exports consisted almost entirely of tin and other minerals. In 1942, 45 percent of tin went to Britain and 55 percent to the United States, but before World War II Britain took most of the tin exports. Since Bolivia is landlocked, foreign trade must pass through free ports in Chile and river ports on the Amazon.

From its lowland tropical forests, Bolivia gets rubber, quinine bark, almonds and Brazil nuts, dyewoods, mahogany, quebracho and other hardwoods. Rubber exports in 1942 totaled 1,486 tons.

Railway mileage totals 1,867 miles, all in western Bolivia; the principal lines connect La Paz with the Chilean ports of Arica and Antofagasta. Highway mileage in 1945 was 3,710, much of it unimproved. Airlines play an important role in Bolivian transportation: national airlines, including the Lloyd Aéreo Boliviano, covered 3,495 route miles in 1943, and Pan American Airways links the country with the rest of the Americas. In the lowlands thousands of miles of navigable streams are the chief means of transportation. Telephones in 1942 numbered 2,680.

The 1945 budget totaled approximately 25,040,000. The public debt in 1939 was 132,757,552, mostly internal. American direct investments in 1940 were \$26,829,000; British investments in 1944 were £4,420,817. Revenue comes mainly from export duties on tin and other minerals.

Brazil (Republic)

(Estado Unidos do Brasil)

Area: 3,291,416 square miles.

Population (est. 1945): 45,300,000.

Density per square mile: 13.8.

President: Gen. Eurico Gaspar Dutra.

Principal cities (census 1940): Rio de Janeiro, 1,781,567 (capital and chief port); São Paulo, 1,318,539 (coffee growing center); Recife (Pernambuco), 352,727 (seaport); Salvador (Bahia), 294,253 (seaport); Porto Alegre, 275,678 (seaport); Campos, 225,443 (sugar); Belo Horizonte, 211,650 (mining); Belém (Pará), 208,706 (port for Amazon shipping).

Monetary unit: Cruzeiro.

Racial stock (est. 1939): White, 60%; Mixed, 25%; Negro, 12%; Indian and Asiatic, 3%.

Languages: Portuguese (official), Italian, German.

Religion: Roman Catholic.

Brazil, the only South American nation deriving its culture and language from Portugal, is by far the largest country in South America, covering nearly half the continent. In the Western Hemisphere it is second in area only to Canada. In the world, it is smaller than Russia, China and Canada. It is the world leader in the production of coffee, and its Amazon River is the longest single stream in the world, rising in Peru, flowing through unexplored jungles and emptying into the Atlantic on Brazil's populated and industrialized coast after a course of 3,900 miles.

Brazil was discovered on May 3, 1500, by the Portuguese admiral, Pedro Álvares Cabral. Portuguese colonization efforts began in 1532 and Brazil became a royal colony in 1549. Discovery of gold in 1630, and later discovery of diamonds and sugar cane stimulated colonial progress. King John VI, of Portugal, fleeing Napoleon's forces, set up his royal government in Rio de Janeiro in 1808 and stayed there until he was drawn home by a revolution attempt in 1820. The Brazilians, after holding the seat of Portuguese government, rebelled at resuming colonial status and declared their independence in 1822 under Pedro I, second son of King John VI. Harassed by trouble with his parliament, Pedro I abdicated in 1831 in favor of his five-year-old son who became emperor in 1840 as Pedro II. He proved to be an enlightened and popular monarch whose reign was perhaps the most progressive in Brazilian history.

PEDRO II TO VARGAS. Despite his good works, Pedro II was forced to abdicate in 1889 following a military revolt, after which a republic was set up. In the next few years the country passed through a difficult period of re-adjustment, and until 1893 Brazil was under two military dictators—Marshal Deodoro da Fonseca and Marshal Floriano Peixoto. After a revolt in 1893, Brazil was returned gradually

to stability by a succession of five civilian presidents—Prudente de Moraes Barros, 1894-98; Manuel Ferras de Campos Salles, 1898-1902; Francisco de Paula Rodrigues Alves, 1902-06; Afonso Penna, 1906-09, who died in office; and Nilo Pecanha, 1909-10.

The president during World War I, Dr. Wenceslao Braz, cooperated closely with the Allies and declared war on Germany on Oct. 26, 1917. Reckless expenditure marked the term of Dr. Epitacio da Silva Pessoa, 1919-22, while the presidency of Dr. Arthur Bernardes, 1922-26, was bedeviled by financial difficulties and army dissension. His successor, Dr. Washington Luiz Pereira da Souza, 1926-30, ran into the world depression and was deposed in his last year by a revolutionary group headed by Dr. Getulio Vargas who took over as provisional president.

Vargas' new constitution in 1934 sharply curtailed state's rights and emphasized a nationalistic policy. In 1937 Vargas seized absolute powers, setting up another constitution extending his term indefinitely. In World War II, Brazil cooperated well with the United Nations. Allied air bases were set up in Brazil, Brazilian naval forces patrolled the South Atlantic, and a Brazilian expeditionary force fought in Italy.

The fear that Vargas would never make good on his promise for free elections led to his overthrow on Oct. 29, 1945, and the transfer of his powers to Chief Justice Jose Linhares. In the subsequent elections, on Dec. 12, 1945, victory went to the Vargas candidate—General Eurico Gaspar Dutra, who was inaugurated as president on Jan. 3, 1946.

GOVERNMENT. Brazil is a federal union of twenty states, seven territories and one federal district. The legislature of forty-two senators and 286 representatives, popularly elected on Dec. 2, 1945, took office on Feb. 2 as a constituent assembly. Its first job was to adopt a new constitution and then it was to sit as a congress under the terms of that constitution. The president's term was to be determined by the constitution.

The twenty states, with popularly elected legislatures and governors, and with their own constitutions, have considerable autonomy, but during the Vargas regime they suffered from Federal intervention. An area of 200,000 square miles of borderland was taken away from several states on Oct. 1, 1943, and set up as five territories. These areas were Amapa bordering the Guianas; Rio Branco bordering Venezuela, Guapore bordering Peru and Bolivia, Ponta Pora bordering Paraguay and Argentina, and Iguacu bordering Argentina.

The other two territories are Acre on the Bolivia-Peru border, and Fernando de No-

ronha, 225 miles off the northeast coast from Cape São Roque.

AREA AND POPULATION OF STATES AND TERRITORIES OF BRAZIL, 1945

State or territory	Area (sq. mi.)	Pop. (Jan. 1, 1945)

DEFENSE. Military service is compulsory beginning at twenty-one with an initial training period of one year and service on reserve until forty-five. The permanent army of 112,300 men and 258,000 reserves in 1940 was greatly expanded in World War II. The army is well equipped with modern U. S. lend-lease military goods. The air force, under a separate Ministry of Aviation since 1941, also expanded during World War II and its aviators fought in Italy. In December 1944 the air force took over full Allied responsibility for the aerial defense of the South Atlantic.

The navy on Dec. 31, 1945 had two old battleships of 20,000 tons each, two old light cruisers, twelve destroyers, four submarines, six corvettes, and some smaller craft. During World War II about thirty

warships were acquired, mostly from the United States, including sub-chasers, corvettes and destroyers. Naval dockyards are at Ilha das Cobras (Rio de Janeiro), Pará, and Ladario de Matto Grosso (a river base).

EDUCATION. The educational system is a composite of federal centralization and state autonomy. Education is free and in some states compulsory. It was estimated in 1944 that 3,710,000 students were attending 40,000 schools, of which 39,000 were primary schools and the rest secondary, vocational, and universities. All of the 7 universities are state institutions except the federalized University of Brazil at Rio de Janeiro. Illiteracy in 1940 was officially estimated at less than 50 percent.

RELIGION. The overwhelming majority of the population is Roman Catholic, but religious toleration has long prevailed.

RACIAL STOCK. The racial character of the people varies considerably from section to section: whites predominate in the southern states, Indians in the Amazon, and Negroes in the central and northern coastal states. From 1820 to 1937 there were 4,603,404 immigrants, of whom 32.6 percent were Italian, 30.3 percent Portuguese, 12.9 percent Spanish, 4.9 percent German, 3.9 percent Japanese, and 2.5 percent Russian. Immigration is now limited by a quota system established in 1938. Of the whole population, 22 percent is urban, 49 percent suburban, and 69 percent rural.

AGRICULTURE. Agriculture is the basis of Brazil's economy, but of its 2,000,000,000 acres, only 4 percent is actually under cultivation, the rest being grazing, forest, or economically valueless land. Brazil leads the world in production of coffee and castor beans, and ranks second in cacao. About 9,000,000 acres are devoted to the production of coffee. The 1944-45 crop was 14,000,000 bags of 132 pounds each. The government controls its sale and destroys large stocks (77,330,547 bags from 1931 to 1943) to maintain the price. The 1944-45 cacao crop, grown largely in Bahia, was estimated at 1,850,000 bags. Sugar cane production in 1944 was 1,300,000 metric tons, sold locally or converted into alcohol. Almost 10 million acres are planted with corn (1943-44: 200 million bushels), of which Brazil is the second largest producer in the Western Hemisphere. Other crops include tobacco (est. 1944: 100,000 metric tons); rice (est. 1944: 1,800,000 metric tons); cotton (1944: 2,675,000 bales), beans, mandioca, citrus, fruits, bananas, coconuts and wheat.

Livestock is raised nearly everywhere, but the great centers of the industry are in the central and southern states. There were in 1938 41,883,000 cattle, 23,543,000 wine, 14,167,000 sheep, 6,713,000 horses, and 5,906,000 goats.

MANUFACTURING. Manufacturing is still primarily for domestic consumption, but

industrialization is progressing rapidly. There were in 1943 more than 100,000 factories of all types employing about 1,500,000 workers whose products were valued at over \$1,600,000,000. The leading industrial products were foodstuffs, textiles, chemicals and pharmaceutical products, metallurgical products, clothing, leather, glass and porcelain, paper and rubber articles. The most important is cotton weaving (1942 output: 159,809 tons of yarn and 889,137 square yards of cloth).

TRADE. Exports in 1943 aggregated 8,728,569,000 cruzeiros and imports, 6,073,328,000 cruzeiros. The chief customers were United States 52 percent, Britain 14 percent, and Argentina 9 percent, while the chief suppliers were United States 54 percent, Argentina 18 percent, and Britain 7 percent. Principal exports were coffee 32 percent, textiles 12.6 percent, raw cotton 4.7 percent, cacao 3.9 percent, rock crystal, processed meats, vegetable oils, carnauba wax, and rubber. Coffee has declined in relative importance in recent years. Leading imports include machinery, miscellaneous manufactures, foodstuffs (largely Argentine wheat) and petroleum products.

COMMUNICATIONS. Coastwise and river steamers are the main links between north and south Brazil and especially within the Amazon basin where inland waterways are the only means of land communication. Navigable waterways total 26,713 miles. The merchant marine in 1939 was 305 ships of 487,820 tons, many of them owned by the state-controlled Lloyd Brasileiro. Coastwise traffic is restricted to Brazilian ships, but traffic on the Amazon is open to all ships.

Railway mileage in 1945 totaled 21,750, mostly of one meter gauge and located south of Bahia. Railway development has been hampered by natural obstacles, especially by coastal mountains, but extensive building is in process by the government, which owns 70 percent of the mileage, and by private industry. Highways in Brazil total 37,280 miles, and common roads, about 124,000 miles. In 1944 seven air lines serving Brazil carried 116,195 passengers. The government air force operates mail schedules over domestic routes that are commercially unprofitable. Communication facilities included 38,754 miles of telegraph line in 1939, a 1941 total of sixty-three broadcasting stations and 500,000 radio sets, and 331,000 telephones in 1943.

FINANCE. Recent statistics: estimated 1945 revenue, 8,232,399,000 cruzeiros; estimated expenditure, 8,205,298,000; foreign debt as of June, 1944, 1,990,968,797 cruzeiros; American direct investments in 1944, \$240,000,000; British investments in 1944, 229,147,252 pounds. The income tax is the government's chief source of revenue. During World War II, Brazil ranked fifth in the world in receiving U. S. lend-lease

goods. Its share totaled \$319,494,000, almost three times as much as was received by all other Latin American nations combined.

TOPOGRAPHY. The most populous of Latin American nations, Brazil covers about three-sevenths of the continent, extends 2,965 miles north-south, 2,691 miles east-west, and borders every South American state except Chile and Ecuador. Its area would blanket the United States, with nearly enough left over to make another Texas. Its state of Amazonas would make nearly five Californias. Brazil has two principal physical divisions. The lowlands are made up of the heavily forested tropical river basin of the Amazon, the world's largest drainage area; and the less heavily forested basin of the La Plata to the south. The highland is a vast plateau, 1,000 to 3,000 feet high, traversed by several low mountain ranges, and extending almost from the seacoast to the Bolivian frontier and south to the plains of Rio Grande do Sul. The plateau is more than half of the country and, with the narrow coastal plain, supports 90 percent of the population. In the extreme northeast are the relatively undeveloped Guiana highlands. Brazil's 3,642-mile coast line, twice the distance from Portland, Me., to Key West, Fla., is indented with many bays, nearly landlocked and making fine harbors.

CLIMATE. Brazil is almost wholly in the torrid zone, but such factors as altitude, prevailing winds, rainfall and distance from sea combine to make climate variation ranging from tropical to temperate. Manaus on the Amazon has average temperature of 80.9 degrees and annual rainfall of 71.65 inches. The corresponding figures for Rio de Janeiro are 72.5 degrees and 44 inches. In much of the Amazon basin rainfall averages 80 inches; in a few areas, over 100 inches.

RIVERS. More than a third of Brazil is drained by the Amazon and its more than 200 tributaries. The river, rising in the Peruvian Andes where it is called Rio

Maranon, is navigable for ocean steamers to Iquitos, 2,300 miles upstream, and open for river boats drawing fourteen feet, for 500 miles more. Southern Brazil is drained by the La Plata system—the Paraguay, Uruguay and Paraná Rivers. The most important stream entirely within Brazil is the São Francisco, navigable for a thousand miles but broken near its mouth by the 260-foot Paulo Affonso Falls, with estimated potential 1,000,000 horsepower.

MINERAL RESOURCES. Brazil's vast mineral resources are among her least developed assets. The most important are coal (estimated reserves of 5,000 million tons; estimated 1944 production, 1,860,000 metric tons) and iron ore, found chiefly in Minas Gerais (1943 output: 784,000 metric tons). The Volta Redonda steel plant, established with the aid of a loan from the U. S. Export-Import Bank, went into production in 1946 with an annual capacity of 350,000 tons of steel ingots. Other important minerals are manganese ore (1944: 147,000 metric tons); gold (1944: 178,000 oz.); diamonds (1943: 275,000 carats); bauxite (1944: 5,000 metric tons); tungsten (1944: 2,200 metric tons); quartz crystals (1941: 1,980 tons); uranium; chrome ore; graphite, and titanium.

FORESTS, FISHERIES. Over half of Brazil's area is forested, but the extensive forest resources are relatively undeveloped. The largest single forest commodity is timber, chiefly pine from the southern states, and the wax of the carnauba palm, used for insulation and phonograph records and produced commercially only in Brazil (1941 exports: 11,766 tons). Rubber production, mostly in the Amazon basin, was estimated in 1945 at 50,000 metric tons, but it has not developed as extensively as was once expected. Other forest products are Brazil nuts, yerba maté, medicinal plants, and vegetable oils.

There are vast fishing banks and grounds in the rivers and sea. The government-owned fishing industry's annual average catch is 3,000,000 kilos.

Western Hemisphere Census Planned for 1950

Source: U. S. Bureau of the Census.

The greatest census project in history, consisting of the simultaneous enumeration of the people of all the nations of the Western Hemisphere, is planned to be taken at the same time as the general census of the United States in 1950. The idea of a hemispherical census was first proposed by Dr. Alberto Arco Parro, Chairman of the Inter-American Institute's Committee on Demographic Statistics. Dr. Parro's proposal was that each of the 22 American nations plan a complete census for 1950; that in this census certain standards be adopted by all the countries, thereby procuring inter-American comparability of data. This hemispherical census would embrace not only population, but agriculture, including livestock and forest products; production, distribution, and utilization of crops; basic facts as to trade in food products, fibers, and other raw materials; nutrition, health, sanitation, shelter, standards of living, and teaching. The proposal was approved by the American nations in the first Inter-American Demographic Congress, which met in Mexico City, October 1943.

Definitions

COLONY: a company of people, purposely or otherwise, transplanted from their mother country and remaining subject to the jurisdiction of the parent state.

CROWN COLONY: a British Empire colony in which the crown retains some kind of control over legislation.

DOMINION: an autonomous community within the British Empire, equal in status to any other dominion, but united by a common allegiance to the crown.

PROTECTORATE: a relation of a superior authority assumed by one power, in which the former protects the latter from domestic or foreign disturbance or dictation, and shares in the management of its affairs.

MANDATE: an order or commission granted by the League of Nations (before its defunction) as mandator to a member nation.

SPHERE OF INFLUENCE: a territory within which the political influence or the interests of one nation are permitted by other nations to be more or less exclusive. Also loosely used to denote regions more or less under the control of a nation but not constituting a formally recognized protectorate or suzerainty.

SUZERAIN: a state that exercises political control over another state in relation to which it is sovereign.

TRUSTEESHIP: administration by a member of the United Nations of an area not yet ready for self-government.

EUROPE

United Kingdom of Great Britain and Northern Ireland

Area: 93,991 square miles.

Population (est. 1941): 47,755,000.

Density per square mile: 508.1.

Ruler: King George VI.

Prime Minister: Clement R. Attlee.

Principal cities (est. 1938): London (Greater), 5,555,000 (capital); Glasgow*, 1,131,800 (seaport, shipbuilding); Birmingham, 1,041,000 (iron and steel); Liverpool, 827,400 (seaport); Manchester, 732,900 (cotton textiles); Sheffield, 600,000 (steel, cutlery); Leeds, 494,000 (whole-cloth clothing); Edinburgh, 475,500* (capital, Scotland).

Monetary unit: Pound sterling.

Racial stock: English, Scotch, Welsh, Irish.

Language: English.

Religion: Protestant Episcopal (established Church).

*Estimated 1940.

HISTORY. The history of Britain is obscure until the Roman invasions of the 1st century B. C. brought it in contact with the continent. When the Roman legions withdrew in the 4th century A. D., the inhabitants were left weak and divided and they fell easy prey to the invading hordes of Angles, Saxons and Jutes from Scandinavia and the Low Countries. Seven large kingdoms were established and the orig-

inal Britons were forced into Wales and Scotland. It was not until the 11th century that the country became finally united under the Danish King Canute. Following the death of the Anglo-Saxon King, Edward the Confessor, a dispute as to the succession arose, and William, Duke of Normandy, invaded England, defeating the Saxon Harold at the battle of Hastings (1066). The Norman conquest was accompanied by the introduction of Norman law and of feudalism. The reign of Henry II (1154-1189), the first of the Plantagenets, saw an increasing centralization of royal power at the expense of the nobles, but in 1215 John (1199-1216) was forced to sign the Magna Charta—the basis of the English constitution—which awarded the people and especially the nobles certain basic rights. Edward I (1272-1307) continued the conquest of Ireland, reduced Wales to subjection, and made some gains in Scotland. In 1314, however, English forces led by Edward II were ousted from Scotland at the battle of Bannockburn. The late 13th and the early 14th centuries saw the development of a separate House of Commons with tax-raising powers. Edward III's claim to the throne of France led to the Hundred Years' War (1338-1453) which ended with the loss of almost all the large English territory in France. The war caused great poverty and discontent in England which was increased by the Black Death, a plague which reduced the population by about one-third. The Wars of the Roses (1455-1485), a struggle for the throne between the great barons of the Houses of York and Lancaster, were ended by the victory of Henry Tudor at Bosworth Field (1485). His son Henry VIII (1509-1547) broke with the papacy and cut off England from the Roman Church when the Pope refused to allow him to divorce his first wife, Catherine of Aragon. Under Edward VI and Mary, the two extremes of religious fanaticism were reached and it remained for Henry's daughter, Elizabeth (1558-1603), to settle the Church of England on a moderate basis. In 1588 the Spanish Armada, a fleet sent out by Catholic King Philip II of Spain, was defeated by the English and destroyed by a storm.

Elizabeth's heir was of the house of Stuart—James VI of Scotland—who joined the two crowns as James I (1603-1625). The Stuart kings were neither popular, tactful, nor economical. Their failure to avoid large debts forced them either to depend on Parliament for grants of taxes or to raise money by illegal means. In 1642 war broke out between Charles I and a large portion of the Parliament; Charles was defeated and executed in 1649. The Puritan Commonwealth endured for ten years, but with the death in 1658 of Oliver Cromwell, the Lord Protector, the government fell to pieces and Charles II was restored in 1660.

The struggle between the King and Parliament continued, but Charles II knew when to compromise. His brother James II (1685-1688) possessed none of this ability and he was ousted by the Revolution of 1688 which confirmed the predominant position in the nation of Parliament. James' daughter Mary and her husband William of Orange now ruled jointly. The reign of Queen Anne (1702-1714) was marked by the victories over France of John Churchill, Duke of Marlborough, at Blenheim, Oudenarde, and Ramillies in the War of the Spanish Succession. England and Scotland were joined together by the Act of Union (1707). Upon the death of Anne (1714), the distant claims of the elector of Hanover were recognized and George I became King of England.

The 18th century was a period of gradual growth and change. At home the unwillingness of the German kings to rule resulted in the formation by the King's ministers of a cabinet, headed by a prime minister, which directed all public business. Abroad the constant wars with France resulted in the expansion of the British Empire all over the globe, and particularly in North America and India. This imperial growth was checked by the revolt of the American colonies (1776-83). The age-long struggle with France broke out again in 1793, and during the lengthy Napoleonic Wars, which ended at Waterloo (1815) England was pitted at one time against almost all of Europe.

The Victorian era, named after Queen Victoria, who reigned from 1837 to 1901, saw the growth of a democratic system of government, which began with the Reform Bill of 1832. The two important wars in Victoria's reign were the Crimean War against Russia (1853-56) and the Boer War (1899-1902). The latter was the result of England's imperialist expansion in South Africa which was accompanied by enormous extension of her dominions throughout Africa.

The reign of Edward VII (1901-1910) was marked by increasing uneasiness at home and abroad. Within four years after the accession of George V (1910), England entered World War I after Germany invaded Belgium whose neutrality she had guaranteed. The nation was led by coalition cabinets headed first by Herbert Asquith and then (Dec. 7, 1916) by the Welsh statesman, David Lloyd George. The years after the war were marked by quarrels and strikes in industry which culminated in a general strike that almost paralyzed industry in 1926. The Labor (socialist) ministry formed early in 1924 by Ramsay MacDonald fell in October after the publication of the Zinoviev letter which aroused fear of a "Red" peril in Britain. In 1929 a second Labor government was formed but the world economic

depression in 1931 forced a change and a national government was formed composed chiefly of Conservative members. King Edward VIII succeeded to the throne in 1936 on his father's death but abdicated eleven months later in favor of his brother, who became King George VI.

The efforts of Neville Chamberlain to meet by peaceful means the rising tide of Nazism in Germany failed with the German invasion of Poland (Sept. 1, 1939), which was followed by England's entry into World War II (Sept. 3, 1939). Serious Allied reverses in the spring of 1940 led to Chamberlain's resignation and the formation of another coalition war cabinet by Conservative leader Winston Churchill, who led England through most of World War II. Churchill resigned as the coalition leader shortly after V-E Day, but then formed a "caretaker" government which remained in office until after the parliamentary elections on July 5, 1945 in which the Labor party won an overwhelming victory. The Labor government formed by Clement R. Attlee after the official returns on July 26 embarked upon a socialistic program at home and fought to maintain the Empire's position abroad.

AREA AND POPULATION OF MAJOR SUBDIVISIONS, (Estimate of 1938)

Subdivision	Area	Population
England	50,870	39,050,780
Wales	7,469	2,063,420
Scotland	29,794	5,040,000*
Northern Ireland	5,238	1,295,000†

GOVERNMENT

RULER. King George VI, born December 4, 1895, second son of King George V and Queen Mary; succeeded to the throne on the abdication of his brother King Edward VIII December 10, 1936; married April 26, 1923 to Lady Elizabeth Bowes-Lyon (born Aug. 4, 1900). Children: (1) Princess Elizabeth Alexandra Mary, born April 21, 1926 (heir presumptive); (2) Princess Margaret Rose, born August 21, 1930. The King's living brothers are Prince Edward Albert, Duke of Windsor (formerly King Edward VIII), born June 23, 1894 and Prince Henry William, Duke of Gloucester, born March 31, 1900.

NATIONAL GOVERNMENT. The United Kingdom is a constitutional monarchy, with a king and a parliament consisting of two houses: the House of Lords consisting of about 670 hereditary peers, 24 spiritual peers, 16 Scottish representative peers, a number of Irish representative peers (vacancies are no longer filled), and a few life peers who have held high judicial office;

and the House of Commons, numbering 640 members, elected by practically universal suffrage. Supreme legislative power is vested in Parliament, which holds office for five years unless sooner dissolved. The executive power of the Crown is exercised by the Cabinet headed by the Prime Minister. The latter, normally the head of the party commanding a majority in the House of Commons, is appointed by the sovereign with whose consent he in turn appoints the rest of the ministry. All ministers must be members of one or the other houses of Parliament; they are individually and collectively responsible to crown, Prime Minister and Parliament. The Cabinet proposes bills and arranges the business of Parliament but it depends entirely on the votes of confidence in the Commons. By an act passed in 1911 the lords cannot hold up "money" bills, but they can delay other bills for a period of two years.

By the Act of Union (1707) the Scottish parliament was assimilated with that of England, and Scotland is now represented in the Commons by 74 members. The Secretary of State for Scotland, a member of the Cabinet, is responsible for the administration of Scottish affairs.

PARTY STANDING IN HOUSE OF COMMONS (Elections July 1945)

Party	Seats
Labor	393
Conservative	197
Liberal National	13
Liberal	11
National	6
Independent Labor	3
Communist	2
Commonwealth	1
Independents	14
	640

NOTE: The votes received by each party in the July 1945 elections were as follows: Labor, 11,967,985; Conservative, 9,087,238; Liberal National, 759,884; Liberal, 2,227,400; Independent Labor, 46,679; Communist, 102,780; Commonwealth, 110,634; Independents, 625,250.

The members of the Cabinet are: Clement Richard Attlee (Prime Minister, First Lord of the Treasury), Herbert Stanley Morrison (Lord President of the Council), Ernest Bevin (Secretary of State for Foreign Affairs), Arthur Greenwood (Lord Privy Seal), Edward Dalton (Chancellor of the Exchequer), Sir Richard Stafford Cripps (President of the Board of Trade), Lord Jowitt (Lord Chancellor), Albert Victor Alexander (Minister of Defence), James Chuter Ede (Secretary of State for the Home Department), Viscount Addison (Secretary of State for Dominion Affairs),

Lord Pethick-Lawrence (Secretary of State for India and Burma), A. Creech Jones (Secretary of State for the Colonies), Capt. Frederick John Bellenger (Secretary of State for War), Philip Noel-Baker (Secretary of State for Air), Joseph Westwood (Secretary of State for Scotland), George Alfred Isaacs (Minister of Labour and National Service), Emanuel Shinwell (Minister of Fuel and Power), Ellen Wilkinson (Minister of Education), Aneurin Bevan (Minister of Health), and Thomas Williams (Minister of Agriculture). Several other ministers do not hold cabinet rank.

LOCAL. England and Wales are divided into 62 administrative counties, including the county of London, and 83 county boroughs. The counties are administered by the justices and by popularly elected county councils. All incorporated towns are administered by a municipal corporation consisting of the mayor, aldermen, and burgesses. Local government in Scotland is comparable to that in England and Wales.

JUDICIARY. The ultimate court of appeal in the judicial system is the House of Lords, while the final court of appeal for Indian and certain of the Dominions is the Judicial Committee of the Privy Council. Below the House of Lords on the civil side is the High Court of Judicature, divided into two parts, the Court of Appeal, and the High Court of Justice which in turn has three divisions: (1) Chancery, (2) Kings Bench, (3) Probate, Divorce, and Admiralty. On the criminal side is the Court of Criminal Appeal, which is the court of last resort barring the allowance of an appeal to the Lords (three allowed since 1907) on the intervention of the Home Secretary who exercises the royal prerogative. Actually these superior courts hear only a small fraction of the cases, and most of the trials are held in a complicated system of inferior courts, exercising original jurisdiction. The Lord Chancellor, Lord Chief Justice, Lords of Appeal in Ordinary (law members of House of Lords) and Lord Justices of Appeal are appointed by the Prime Minister; others, by the Lord Chancellor.

DEFENSE. Compulsory military service, introduced in May 1939, is still in effect although in mid-1946 it was contemplated that only 17 and 18 year olds would be called up during 1947 and 1948. The armed forces are comprised of three separate services—the Army, the Royal Navy, and the Royal Air Force. Coordination of these services through the appointment to the Cabinet of a Minister of Defence was projected in a White Paper issued Oct. 5, 1946. While the Prime Minister retains supreme responsibility for defense, the Defence Minister is to have coordinating and executive duties including (1) apportionment in broad outline of available resources between the three services; (2)

settlement of questions of general administration on which a common policy for the three services is desirable; and (3) administration of inter-service organizations, notably Combined Operations and the Joint Intelligence Bureau. Service ministers are no longer Cabinet members but continue to be members of the Defence Committee headed by the Prime Minister with the Defence Minister as deputy chairman; this committee is responsible to the Cabinet both for the review of current strategy and for coordinating departmental action in preparation for war. The Chiefs of Staff Committee, analogous to the U. S. Joint Chiefs of Staff, remains responsible for preparing strategic appreciations and military plans and submitting them to the Defence Committee.

Budget estimates for the fiscal year 1946-47 follow:

	Estimate	Strength*
Navy	£255,075,000	492,800
Army	682,000,000	2,950,000
Air	255,500,000	760,000

*Maximum during period.

Control of the land forces is exercised by the Army Council headed by the Secretary of State for War. Its members include the Chief of the Imperial General Staff, the Adjutant General and Quartermaster General.

The Royal Navy is controlled by the Board of Admiralty headed by the First Lord of the Admiralty, who is responsible to Parliament. The fourteen other members include the First Sea Lord and Chief of Naval Staff. The Royal Navy (Dec. 31, 1945) included 13 battleships, 1 battle cruiser, 14 fleet aircraft carriers, 42 escort carriers, 63 cruisers, 300 destroyers and 150 submarines. War losses totaled 3,282 vessels, including 3 battleships, 2 battle cruisers, 5 fleet carriers, 23 cruisers, 134 destroyers and 77 submarines.

Control of the Royal Air Force is vested in an Air Council analogous to the Army Council and headed by the Secretary of State for Air. The Fleet Air Arm was transferred to the Royal Navy in 1937.

The total strength of the armed forces (Aug. 31, 1939) was 681,000. Between that date and June 30, 1945 another 5,215,000 men were taken in. Of the total of 5,896,000, 923,000 served in the Royal Navy, 3,788,000 in the Army and 1,185,000 in the Royal Air Force. The Women's Auxiliary Forces added 619,000 to their 1939 strength of 21,000.

CASUALTIES OF WORLD WAR II

	73,642	569,501	112,296	755,439

SOCIAL AND ECONOMIC CONDITIONS

EDUCATION. In 1937-38: elementary, England and Wales—departments under separate head teachers, 29,988, scholars on register 5,150,874; elementary, Scotland—schools 2,895, scholars 617,047; elementary, Northern Ireland—schools 1,700, scholars 491,862; secondary, England and Wales—grant-aided schools 1,398, scholars 470,003; secondary, Scotland—grant-aided schools 552, scholars 156,645; secondary, Northern Ireland—grant-aided schools 75, scholars 24,557; universities, students: England 41,307 (full-time, 36,378); Wales 3,089 (full-time 2,970); Scotland, 10,384 (full-time, 8,841); Northern Ireland, 1,590 full-time students.

AGRICULTURE. In spite of the rapid growth of manufacturing and commerce, agriculture remains one of Britain's chief industries, employing well over 1,000,000 persons. The area devoted to it in 1938 was about four-fifths of the country's land—over 45,334,000 acres out of a total area of 56,200,000 acres. In 1945 land under the plow amounted to 19.2 million acres; permanent grassland, 11.8 million acres. In Scotland over two-thirds of the land used for agriculture is uncultivated rough grazings; while over two-thirds of the cultivated area is arable land, in England and Wales three-fifths of the cultivated land is under permanent grass and only one-sixth of the total agriculture land is rough grazings. The value of the agricultural output of Great Britain was estimated in 1938 at from £270,000,000 to £280,000,000. Of this output livestock and livestock products accounted for the bulk—at least 70 percent. Nearly one-half the total wheat and barley acreage is to be found in the ten eastern counties of England, but the acreage of oats is fairly evenly distributed over the whole country.

LEADING AGRICULTURAL PRODUCTS,

1938 AND 1943

(in 1,000 tons)

Product	1938	1943
Wheat	2,040	3,855
Oats	1,176	3,419
Barley	12	106
Potatoes	883	1,834
Beet sugar	3,843	10,978
Wool	333	605
	55	42

Livestock (1945) included 9,624,000 cattle, 20,053,000 sheep, 2,152,000 pigs, 918,000 horses (1944), and 62,296,000 poultry. Cattle alone occupy a predominant position in British agriculture, accounting for about 1 percent of the total farm output. Production of cheese (1938) was 48,500 tons, butter 52,000 tons, beef and veal 757,000 tons, and mutton and lamb 283,000 tons.

Large quantities of foodstuffs normally are imported, but during World War II an extensive plowing-up campaign was inaugurated with the result that by 1942 an extra 6,000,000 acres had been brought under cultivation. It was estimated that increased production in 1942 represented a saving of 5,000,000 tons of shipping space.

INDUSTRY. Great Britain is second only to the United States among the industrial nations of the world. The most important manufacture is heavy goods such as machinery, tools, bridges, locomotives and tin-plates; the industry is concentrated in the north and Midlands of England. Sheffield is the center of the steel industry, while the china industry is concentrated in the Midlands. The cotton industry is centered in Lancashire; Liverpool, Manchester, Oldham, Preston, and Bolton are the main manufacturing towns. The wool industry, England's oldest large trade, is located just east of the cotton towns, at Leeds, Bradford and Hull in Yorkshire. An important industrial region is the central Lowlands of Scotland where woollens, silks, linens, cottons and lace; glass and paper; steel and pig iron are produced. Important shipyards are located along the coast, and the United Kingdom normally launches over one-third of the world's new merchant vessels each year.

Pig iron production (1943) was 7,187,000 tons, and steel ingots and castings 13,031,000 tons. In 1937 there were 442 open hearth furnaces. The total output of finished steel products (1938) was 7,491,400 tons.

MAJOR MANUFACTURES, 1935

Products	Number of workers*	U. S. dollars
Beverages, Food and Tobacco	520,649	3,253,535,437

*In establishments employing 10 or more persons.

TRADE. The United Kingdom's economic prosperity is dependent on its foreign trade. Overseas trade for 1938 and for the years 1941-44 is shown in the next table. Principal exports (1938) were machinery 12.8 percent, iron and steel and manufactures 8.8 percent (2,111,000 tons), coal 7.9 percent (39,524,000 tons), cotton cloth 6.8 percent (145,000 tons), vehicles 4.3 percent, woolen and worsted cloth 3.3 percent,

electrical goods and apparatus 2.9 percent and cotton yarns and thread 2.8 percent. Leading imports included butter 5.5 percent (533,000 tons), raw wool 4.5 percent (441,000 tons), petroleum 4.4 percent (2,635,552,000 gal.), wheat 4.2 percent (5,691,000 tons), bacon 3.4 percent (385,000 tons), tea 3.3 percent, raw cotton 3.1 percent (603,000 tons) and beef (chilled and frozen) 2.6 percent (687,000 tons). Leading customers were Union of South Africa 8.4 percent, Australia 8.1 percent, India 7.2 percent, Canada 4.8 percent, Germany 4.6 percent, United States 4.4 percent, Elre 4.3 percent, and Argentina 4.1 percent. Leading suppliers were United States 12.8 percent, Canada 8.6 percent, Australia 7.8 percent, India 5.4 percent, New Zealand 5.1 percent, Argentina 4.2 percent, Denmark 4.1 percent, and Germany 3.5 percent. Imports of foodstuffs, excluding those from Elre (1943) included wheat, 3,975,000 tons, oilseeds, oils and fats, 2,154,000 tons, meat (including bacon), 1,358,000 tons, sugar, 1,458,000 tons and beverages and other foods 963,000 tons. Lend-lease aid received by the British Empire (1941-45) totaled \$30,753,304,000. Lend-lease exports shipped to the United Kingdom (to Dec. 31, 1945) totaled \$13,879,627,000 but many supplies shipped to other theaters were also for the United Kingdom account.

Overseas Trade

(in millions of dollars)

	1938	1941	1942	1943	1944
Exports	1,895	1,657	1,090	938	1,038

OVERSEAS TRADE, 1945

(in £000)

Class	Exports	Imports
Total	393,378	1,051,746
Food, drink and tobacco	55,775	460,875
Raw materials	15,021	280,037
Articles wholly or mainly manufactured	301,409	290,819
Animals not for food	740	3,932
Parcel Post	20,433	16,083

COMMUNICATIONS. The merchant marine (July 1, 1939) excluding vessels under 100 tons, totaled 17,964,158 gross tons. Losses during World War II totaled about 10,870,000 tons. On June 30, 1946 412 merchant vessels of 1,764,943 gross tons were under construction in the United Kingdom. Prior to World War II the British merchant marine carried two-fifths of the world's seaborne commerce. Construction during World War II aggregated 6,900,000 gross tons, a total second to the U. S.

Under the Railways Act, 1921, the railways of Great Britain are grouped into four systems—London, Midland and Scottish (6,940 miles), London and North-Eastern (6,380 miles), Great Western (3,793 miles) and Southern (2,185 miles); total, 19,299 miles. In 1943 297.2 million tons of freight were carried; total receipts were £394,360,000. Roads (Mar. 31, 1938): England and Wales (class I) 20,627 miles; (class II) 13,070 miles; Scotland (class I) 6,632 miles; (class II) 3,967 miles; Northern Ireland (class I) 1,273 miles; (class II) 1,933 miles. During 1943 British Overseas Airways planes flew 12,481,485 miles, carrying 65,667 passengers, 1,271 tons of mail and 3,975 tons of freight. In addition, six companies in Great Britain flew 1,572,485 miles, carrying 64,660 passengers and 1,530,696 tons of mail and freight. In 1944 there were 9,609,503 wireless receiving set licenses and in 1939, 3,235,500 telephones. Cars totaled 1,944,394 in 1938.

FINANCE. Revenue (est. 1946-47) £3,161,300,000. Expenditure (est. 1946-47) £3,886,917,000. Revenue (actual 1945-46) £3,284,450,253. Expenditure (actual 1945-46) £5,484,333,461. National debt (March 31, 1945) £22,398,100,000. One of the key points in the Labour party program was the nationalization of the Bank of England which was effected March 1, 1946.

NATURAL FEATURES

GEOGRAPHY. The United Kingdom, consisting of England, Wales, Scotland and Northern Ireland, has an area only about one-third of that of the state of Texas. England in the southeast part of the British Isles is separated from Scotland on the north by the granite Cheviot Hills; from them the Pennine chain of uplands extends south through the center of England, reaching its highest point in the Lake District in the northwest. To the west along the border of Wales—a land of steep hills and valleys—are the Cambrian Mountains while the Cotswolds, a range of hills in Gloucestershire, extend into the surround-

ing shires. The remainder of England is plain land, though not necessarily flat, with the rocky sand-topped moors in the southwest, the rolling downs in the south and southeast and the reclaimed marshes of the low-lying Fens in the east central districts. Scotland is divided into three physical regions—the Highlands, the central lowlands containing two-thirds of the population and the southern Uplands. The western Highland coast is intersected throughout by long narrow sea-lochs or fjords. Scotland also comprises the Outer and Inner Hebrides and other islands off the west coast and the Orkney and Shetland Islands off the north coast. The arms of the sea are so numerous and in several cases penetrate so far inland that few places in Scotland are more than 40 miles from the sea.

HYDROGRAPHY. In addition to the numerous inlets and bays of the coast, England has a group of lakes in the northwest which includes Windermere, Coniston, Derwentwater, Ullswater, and Grasmere. Important rivers flowing into the North Sea are the Thames, Tees, Tyne and the Humber, which is the estuary of the Trent and Ouse Rivers. On the west are the Severn and the Wye, which empty into the Bristol Channel and are navigable, as are the Mersey and Ribbe. The Conway River in northern Wales is also navigable. Scotland has numerous picturesque lochs or lakes. Its most important river is the Clyde.

CLIMATE. England lies in the same latitude as Labrador across the Atlantic to the west and the Baltic countries to the east, but the climate is tempered by the westerly winds which blow from off the warm Gulf Stream. Excessive summer heat is also tempered by the sea-blowing winds. Rainfall is abundant throughout the year varying from over 35 inches in the west to less than 25 inches in the Thames area; during November and March fogs blow in off the sea.

MINERALS. Great Britain's most important mineral resource is coal which was responsible to a large extent for British industrial supremacy during the late 18th and the 19th centuries. Reserves have been variously estimated at from 150,000 million to 200,000 million tons. Exports from the 227,002,000 tons produced in 1938 totaled 49,630,000 tons. The average number of persons employed in coal mining (1943) exclusive of clerks was 707,800.

Most of British iron ore is produced in England especially in Cumberland, Lancashire, and Staffordshire. Tin ore and copper are obtained almost exclusively from Cornwall while lead comes mainly from Flint, Durham, and Derbyshire. Zinc occurs mainly in North Wales, the north of England, the Isle of Man and the county of Dumfries. The whole British supply of

china clay (kaolin)—of great importance in the ceramic, papermaking, bleaching, and chemical industries—comes from Cornwall. Petroleum production is negligible, but oil shale exists in large quantities. In 1938 output of shale was 1,551,000 tons. About 33,000,000 gallons of crude oil and crude naphtha and 25,200 tons of sulphate of ammonia were produced.

MAJOR MINERALS, 1944

Mineral	Metric tons*
Coal	188,400,000
Iron ore	18,660,000†
Tin	25,000
Aluminum	36,000
Zinc (smelter)	60,000†

*Approximate. †1943. ‡1940.

The most important potential sources of water power are in the highlands of Scotland, North Wales and Cumberland. Electricity generated in 1943 amounted to 36,942 million units. Gas manufactured (millions of cubic feet) in 1943 included coal gas 208,434.

FORESTS, FISHERIES. Great Britain was once heavily forested, but centuries of timber cutting and clearing have denuded the country of the original forests. Woodland of all types approximates 3,000,000 acres, and barely 40 percent of Britain's surface is covered with timber. Consequently she is heavily dependent on imported timber. Imports (1939) were valued at £37,128,694.

Great Britain's sea fishing industry is among the most important in the world. The principal kinds of fish caught are herring, cod, haddock, plaice and hake, classed as wet fish, and among shellfish, oysters, crabs and lobsters. The most important factor in the export trade is salted herring which represents about 70 percent of the total (4,381,587 hundredweight valued at £3,870,262 in 1938). Fishing vessels on the register (1938) numbered 11,552 with a net tonnage of 245,404. Britain's canned fish industry is peculiar as Britain imports the great bulk of the canned fish which is consumed and exports most of which is actually canned in Britain—herring. The principal grounds frequented by British fishermen are the North Sea, Iceland, Faroes, south of Ireland, west of Scotland, west of Ireland, Irish Sea and English Channel. The catch in 1938 (excluding shellfish, whales and whale oil) totaled 1,174,811 tons valued at \$78,715,233. The catch of wet fish only (1943) amounted to 345,000 tons.

GIBRALTAR—Status: Colony.

Governor: Lt. Gen. Sir Thomas R. Eastwood.

Gibraltar, at the south end of the Iberian Peninsula, is a rocky promontory commanding the entrance to the Mediter-

anean. Aside from its strategic importance, it is also a free port, naval base and coaling station. It was captured by the Arabs crossing over from Africa into Spain in 711 A. D. In the 15th century it passed to the Moorish ruler of Granada and later became Spanish. It was captured by an Anglo-Dutch force during the War of the Spanish Succession in 1704 and passed to Britain by the Treaty of Utrecht in 1713. Most of the inhabitants are of Spanish, Italian, and Maltese descent. There are no important industries.

MALTA—Status: Colony.

Capital: Valetta (pop. 1931: 22,883).

Governor: Lt. Gen. Sir Edmond C. A. Schreiber.

Foreign trade (1938): exports, \$3,375,000 (17 percent to Britain); imports, \$18,920,000 (27.9 percent from Britain); chief exports, potatoes 16.9 percent, onions 3.7 percent.

Agricultural products: potatoes, onions, cereals, fruits.

The Maltese islands lie between Europe and Africa, in the central channel linking the eastern and western Mediterranean. The inhabited islands are Malta (91 square miles), Gozo (26 square miles), and Comino (1 square mile). The Order of Knights of St. John (Malta), who obtained the islands from Charles V in 1530, reached their highest fame when they withstood an attack by superior Turkish forces in 1565. Napoleon seized the island in 1798, but the French forces were ousted by British troops in 1799, and British rule was confirmed by the treaty of Paris (1814). The principal importance of Malta is its strategic location as a naval base; it was heavily attacked by German and Italian aircraft during World War II. Most of the population are Maltese speaking the Maltese language, a tongue akin to Syriac and Arabic. The islands are densely populated (2202.2 per square mile) and are heavily dependent on imports of food-stuffs, although the soil is fertile and agriculture is a leading industry.

AFRICA

ANGLO-EGYPTIAN SUDAN (See EGYPT).

BRITISH SOUTH AFRICAN PROTECTORATES.

Under this heading are the British protectorates in the south of Africa—Basutoland, Bechuanaland, and Swaziland—which are not part of the Union of South Africa. The territories are administered by a High Commissioner responsible to the Secretary of State for the Dominions in the British cabinet. He also holds the office of High Commissioner for the United Kingdoms in the Union of South Africa. High Commissioner: Sir Evelyn Baring.

BASUTOLAND—Status: Protectorate.
 Capital: Maseru (population 3,000).
 Resident Commissioner: Lt. Col. C. N. Arden Clarke.
 Foreign trade (1942): exports, \$4,163,000; imports, \$1,851,785; chief exports: wool, mohair.
 Agricultural products: corn (1938: 75,680 tons), wheat, sorghum.

Basutoland is a mountainous enclave within the Union of South Africa bounded by the Orange Free State, the Cape Province and Natal. Its altitude varies from 6,000 to 11,000 feet. It was constituted a native state under British protection by a treaty signed with the native chief Moshesh in 1843. It was annexed to Cape Colony in 1871 but on Mar. 13, 1884, was restored to direct control by the Crown. The resident commissioner is advised by a council of 100, 95 of whom are nominated by the native chiefs who administer the affairs of their respective tribes.

The population is restricted almost entirely to the lowland strip in the west; the white population (1,434 in 1936) consists solely of officials, missionaries, traders and a few labor agents for employees in the Union. About 100,000 natives are regularly employed in the Union. Sheep raising is highly developed; in 1940 there were 1,597,887 sheep and, exports of wool in 1943 were about 3,600 tons. Land is the common property of the nation held in trust by the chiefs. There are no European farmers. Trade, carried on by licensed traders, is confined to the exchange of native products for native requirements such as clothing, ploughs and tinware.

BECHUANALAND—Status: Protectorate.
 Capital: Mafeking, in Cape Province.
 Resident Commissioner: A. D. Forsyth Thompson.
 Foreign trade (1942): exports, \$1,657,100; imports, \$2,100,800; chief export, gold.
 Agricultural products: hides and skins, cattle, butter, millet and maize.
 Mineral: Gold (1940: 18,015 ounces).

Bechuanaland lies in south central Africa, bounded on the south and south-east by the Union of South Africa, on the west by South-West Africa, on the north by Angola, and on the northeast by Southern Rhodesia. Its average elevation is 3,300 feet and the greater part is gently undulating. The area was placed under British protection on Sept. 30, 1885 to prevent further Boer encroachment and has since remained a British protectorate. The form of government is similar to that of Basutoland. The territory is administered from Mafeking, across the southern frontier in Cape Province.

Most of the inhabitants are Bantu, but there were 1,899 Europeans in 1936, a few of whom are farmers. The country is essentially pastoral with cattle raising and

dairy farming the chief industries. Some gold is mined in the Tati district near Francistown. Silver and copper also are mined.

Timber for use as fuel and pit props is also produced. Wild animals are numerous, and considerable trapping for skins is carried on. Railway mileage is 386 and highways, 2,048.

GAMBIA—Status: Colony and protectorate.
 Capital: Bathurst (population 1931: 14,370).
 Governor: Sir Hilary P. R. Blood.
 Foreign trade (1943): exports, \$828,600; imports, \$5,004,500; chief exports, groundnuts (over 70 percent).
 Agricultural products: groundnuts, hides and skins, millet, rice, palm kernels.

Gambia, the smallest of the British West African dependencies, is a stretch of land 200 miles long on both sides of the lower Gambia River, surrounded on all land sides by French West Africa. During the 17th century it was settled by various companies of English merchants, but the slave trade was its chief financial support until abolition of slavery in 1807. Trade on the river was assigned to England in 1783 by the Treaty of Versailles and Gambia became a crown colony in 1843. Except for the island of St. Mary on which the capital stands, the whole area is administered as a protectorate.

The inhabitants, mostly Negroes or negroids, are predominantly Mohammedan. The principal economic activity is the cultivation of groundnuts. Internal transportation is by steamer and launch.

GOLD COAST—Status: Colonies (Gold Coast, 23,937 square miles; Ashanti, 24,379 square miles), protectorate (Northern Territories, 30,486 square miles) and mandate (Togoland, 13,041 square miles).

Capital: Accra (population 1937: 72,977).
 Governor: Sir Alan Burns.
 Foreign trade (1942): exports, \$49,166,000; imports, \$34,658,000; chief exports, gold, cacao.
 Agricultural products: Cacao (1942: 231,770 tons), copra, palm kernels.
 Minerals: gold, 1,181,333 ounces (1941); manganese, 565,000 tons (1944); silver.

Early a center of the slaving trade and of Anglo-Dutch rivalry, the Gold Coast, stretching along the Gulf of Guinea for 334 miles became a British possession in 1870. Ashanti in the interior became a protectorate in 1896 and was annexed in 1901. The Northern Territories to the north of Ashanti became a protectorate in 1901. The area is administered by a governor with an Executive Council and a Legislative Council with some elected members. Ashanti and the Northern Territories are administered by Chief Commissioners responsible to the governor.

The natives are all Negroes. There are about 3,100 non-Africans. The principal

native industry is the cultivation of cacao in the production of which the colony leads the world. In 1939 there were 500 miles of railway, and 6,337 miles of highway.

KENYA—Status: Colony and protectorate.

Capital: Nairobi (population 65,000).

Governor: Sir P. E. Mitchell.

Foreign trade (1943): exports, \$17,020,000; imports, \$44,490,000; chief exports, coffee, tea.

Agricultural products: coffee, 19,841 tons (1939), tea, pyrethrum, sugar cane, sisal, corn, cotton, hides and skins.

Minerals: Gold, 77,444 ounces (1939), sodium carbonate, silver, salt.

Forest products: wattle bark and extract, timber.

Kenya Colony and Protectorate extends along the Indian Ocean between Ethiopia and Tanganyika and westward to Lake Victoria and Uganda. Formerly known as the East Africa Protectorate, it was held under a concession from the Sultan of Zanzibar by the Imperial British East Africa Company from 1887 to 1905. It became a crown colony in 1920, the coastal strip leased from the sultan of Zanzibar becoming a protectorate.

The colony is predominantly agricultural and a large area is cultivated by Europeans. The country ranges in altitude from sea level to over 9,000 ft.; hence, the cultivation of tropical, subtropical and temperate crops is possible. Non-natives (1943) included 30,765 Europeans, 17,640 Arabs and 55,795 Asiatics (mostly British Indians). Railway mileage in 1938 was 1,500, and highway mileage, 11,435.

MAURITIUS—Status: Colony.

Capital: Port Louis (population 60,000).

Governor: Sir Henry MacKenzie-Kennedy.

Foreign trade (1942): exports, \$13,030,000; imports, \$11,560,000; chief export, sugar.

Agricultural products: sugar, 354,246 tons (1940), copra, tobacco.

Mauritius is a mountainous island of volcanic origin in the Indian Ocean, about 50 miles east of Madagascar. It was seized in 1810 from the French who had settled it in 1715 and was formally ceded to Great Britain by the Treaty of Paris (1814). The governor is assisted by an Executive Council and a Council of Government of 27 members, ten of whom are elected.

With almost 600 persons per square mile the island is one of the most densely populated regions in the world. The population has a large white element, chiefly French and British, but British Indians are predominant (268,649 in 1931). There are many half-castes. The leading industry is sugar cultivation. Railway mileage is 154 and highways, 700.

NIGERIA—Status: Colony and protectorate.

Area: 372,674 square miles (including Cameroons mandate).

Population (est. 1943): 21,329,328.

Density per square mile: 57.2.

Governor: Sir Arthur Frederick Richards.

Principal cities (est. 1939): Ibadan, 318,320 (native metropolis); Lagos, 167,000 (capital); Kano, 80,634 (textiles, leather goods, cattle).

Monetary unit: British pound.

Racial stock: Native, except about .01% European.

Languages: Native tongues, Arabic, English.

Religions: Mohammedan, Pagan, Christian.

Nigeria, an area twice the size of California, situated on the west African coast on the Gulf of Guinea, was visited by European traders and explorers in the 16th century. By the end of the 18th century, British operators had a virtual monopoly in the area. Between 1879 and 1914, a series of private colonial developments by the British and also re-organizations of the Crown's interest in the region resulted in the formation of Nigeria as it exists today. During World War I, native troops of the West African Frontier Force joined with French soldiers to defeat the German garrison in the Cameroons. After the war, the Treaty of Versailles made a mandate of the Cameroons, which is a narrow strip along Nigeria's eastern border. Today the Cameroons is attached to Nigeria for administrative purposes.

The governor of Nigeria, named by the British Crown, heads the administration of the colony which divides into four sections, each composed of several provinces. A chief commissioner responsible to the governor oversees each group of provinces. The custom of rule by native regimes, advised by British residents, is effected locally wherever practicable.

About 415,000 of the estimated 3,000,000 Nigerian children between seven and fourteen attend primary schools. Perhaps 6,000 attend secondary schools. The Yaba Higher College has sixty-five students. The vast majority of the population is Negro, although in the north the blood is somewhat mixed as a result of invasions by the Fula, Berber and Arab or Arabized people. Islam is the dominant religion but Christian missionary societies are active throughout the country.

Most of the people are agriculturists. The staple food crops are guinea-corn, millet, yams, bananas and maize. In 1940, the principal export crops were, in short tons: palm kernels, 235,521; palm oils, 132,723; cacao, 89,737; groundnuts, 169,486; and cotton and bananas. Livestock estimates in 1938 were 5,075,400 goats, 2,990,700 cattle and 1,886,800 sheep. Hides and skins are a big export item. Aside from small native industry, there is no manufacturing.

Most external trade is with Britain. Exports in 1940 totaled £13,052,916. There is a substantial internal trade, of which Kano is a busy center as a terminal for caravan routes. Imports in 1940 were £10,822,261, including cotton textiles, iron and steel goods, and tobacco products.

The Niger and several other rivers are navigable; otherwise, the 2,341 miles of railway (in 1939) are the chief transport means. Highway mileage totals 21,277. The main ports, except for Lagos, all are on rivers.

Nigeria has a 500-mile ocean frontage. Extending from twenty to sixty miles inland is the swampy Niger delta region, gradually giving way to hilly forest land. The larger part of the colony belongs to the great African plateau which, in Nigeria, reaches a maximum height of 3,000 feet. All of Nigeria lies within the tropics but the climate varies. The southern part is typically tropical, with rainfall up to 140 inches a year, but in some parts of the plateau, near-temperate conditions prevail.

Nigeria is a leading tin producer—13,800 tons in 1944—from mines on the Bauchi plateau. Other major minerals are coal, gold, lead, silver and tungsten.

Over half the area is forested but forest resources are comparatively unexploited. Mahogany—602,629 cubic feet in 1938—is the main timber export, followed by cedar and walnut. In 1940 a total of 683 tons of gum arabic, obtained from the northern provinces, was exported.

NORTHERN RHODESIA—Status: Colony.

Capital: Lusaka (population 1931: 2,396).

Governor: Sir John Waddington.

Foreign trade (1943): exports, \$51,372,000; imports, \$22,498,900; chief export, copper (about 75 percent).

Agricultural products: tobacco, maize, wheat.

Minerals: copper, 248,000 tons (1944), cobalt alloy, 2,473 tons (1942), vanadic oxide, 750.2 tons (1942), zinc.

Northern Rhodesia is in central Africa, bounded on the north by the Belgian Congo, Lake Tanganyika and Tanganyika Territory, on the east and southeast by Nyasaland and Mozambique, on the south-east and south by Southern Rhodesia and on the west by Angola. Much of the country consists of high plateau, with the Congo-Zambesi watershed rising in places to 5,000 feet. Rhodesia was assigned in 1889 to the British South Africa Company headed by Cecil Rhodes. Administrative control was transferred to the Crown on Apr. 1, 1924.

Native tribes number from 50 to 60; there were 18,745 Europeans in 1944. Over 3,000,000 acres are owned and occupied by Europeans. Metals constitute almost all exports by value. Lead and zinc deposits occur at

Broken Hill; copper, at Bwana M'Kuba. Railroad mileage in 1942 totaled 629; arterial roads, 3,158. A number of rivers are navigable.

NYASALAND—Status: Protectorate.

Capital: Blantyre (population 6,000).

Governor: Sir E. C. Richards.

Foreign trade (1945): exports, \$7,388,085; imports, \$6,621,435; chief export, tobacco (about 45 percent).

Agricultural products: tobacco (exports 1945: 8,836 tons), tea (6,859 tons), cotton (1,801 tons).

Nyasaland, a British protectorate since 1891, is a narrow area lying between Mozambique and Northern Rhodesia along the southern and western shores of Lake Nyasa.

Agriculture is the chief occupation, both of the European settlers and natives. In 1940 there were 2,177 Asiatics and 1,812 Europeans. Railway mileage in 1939 totaled 289 and highways 1,852. Lake Nyasa has a steamer service.

ST. HELENA—Status: Colony.

Capital: Jamestown (population 1931: 1,381).

Governor: Major W. B. Gray.

Foreign trade (1942): exports, \$126,500; imports, \$313,130; chief exports, flax fiber and tow.

Agricultural products: flax, potatoes.

St. Helena is a volcanic island (47 square miles) in the S. Atlantic about 1,200 miles from the west coast of Africa. It is famous as the place of exile of Napoleon (1815–1821). It was taken for Britain in 1651 by the English East India Company and became a Crown Colony in 1833. Attached to it are Ascension Island (34 square miles), 700 miles N. W., and the Tristan da Cunha group. Most of the inhabitants are of mixed European, East Indian and African descent.

SEYCHELLES—Status: Colony.

Capital: Victoria (population 5,000).

Governor: Sir W. M. Logan.

Foreign trade (1940): exports, \$356,000; imports, \$329,000; chief export, copra.

Agricultural products: cinnamon, coconuts, maize, sugar cane.

This archipelago of about 92 islands in the Indian Ocean was seized from France by British troops in 1794 and ceded to Great Britain by the Treaty of Paris in 1814. The principal island is Mahé (55 square miles), about 600 miles N.E. of Madagascar.

SIERRA LEONE—Status: Colony and Protectorate.

Capital: Freetown (population 1944: 86,000).

Governor: Major Sir H. C. Stevenson.

Foreign trade (1941): exports, \$6,419,800; imports, \$15,370,400; chief exports, diamonds, iron ore.

Agricultural products: palm kernels and oil, rice, millet, cassava.

Minerals: diamonds (est. 1944: 850,000 carats), iron ore (1938: 965,390 tons), gold.

Forest products: palm kernels, piassava.

Sierra Leone lies on Africa's west coast between French Guinea and Liberia. It has a well-watered northern hilly country but a low swampy coast with an extremely unhealthy climate. The coastal area (colony proper) was ceded to English settlers in 1788 as a home for Negroes discharged from the British armed forces and also for runaway slaves who had found asylum in London. The British protectorate over the hinterland was proclaimed in 1896.

Many of the natives are Mohammedans; Europeans in 1931 numbered 651. Most cultivation is carried on by natives. In 1940 there were 311 miles of railway and 836 miles of road. The harbor of Freetown is the best on Africa's west coast.

SOMALILAND PROTECTORATE—Status: Protectorate.

Capital: Berbera (population 20,000).

Military Governor: Brig. G. T. Fisher.

Foreign trade (1941-42): exports, \$770,000; imports, \$2,565,000; chief export, hides and skins.

Agricultural products: cattle, hides and skins, grains.

Forest products: gums and resins.

The protectorate extends along the Gulf of Aden for about 400 miles and inland for from 80 to 220 miles. The interior is an elevated plateau falling in steep escarpments to the coastal plain. It came under Egyptian influence in 1875 but during the period 1884-86 treaties guaranteeing British protection were signed with the various Somali chiefs. Italian troops occupied the protectorate in 1940 but it was quickly retaken by Imperial troops in 1941. Both executive and legislative power is exercised by the military governor.

There were 2,700 non-natives in 1938. Most of the inhabitants are nomadic Somalis of Mohammedan faith. Their principal activity is stock raising. Domestic animals in 1939 included 3,000,000 sheep, 2,000,000 goats and 1,000,000 camels.

SOUTHERN RHODESIA—Status: Self-governing colony.

Capital: Salisbury (population 1941: 51,760).

Governor: Vice Admiral Sir Campbell Tait.

Prime Minister: Sir Godfrey M. Huggins.

Foreign trade (1940): exports, \$61,000,000; imports, \$38,450,000; chief exports, gold (46.1 percent), tobacco, asbestos.

Agricultural products: tobacco (1943: 16,880 tons), corn, groundnuts.

Minerals: gold (1944: 593,000 ounces), asbestos (1943: 56,382 tons), coal, chrome ore, silver.

Southern Rhodesia is between Northern Rhodesia and the Union of South Africa in

south central Africa, and is part of the great South African plateau. Its northern boundary is the Zambesi River. About two-thirds of the country is covered by trees and shrubs. The country was settled in 1890 by the British South Africa Company led by Cecil Rhodes who, two years before, had obtained a mineral concession from the Matebele chief, Lobengula. With the expiration of the company's renewed charter, the white residents voted in favor of a responsible government of their own in 1922, and on Sept. 12, 1923 the country was annexed to Britain.

Most of the inhabitants are natives, but the country is well-adapted to European settlers who in 1941 numbered 68,954. In addition there were 6,521 Asiatics and half-castes. Farming exists in several forms, from ranching to tobacco growing, but mixed farming is becoming more common. Conditions for cattle raising and dairy farming are especially favorable. In 1942 there were 2,647,154 cattle. Manufacturing is of growing importance with the 44,777 factory workers producing goods valued at \$23,832,240 in 1942. The colony is well served with railways (2,709 mi.) and roads (about 9,000 mi.) as well as airlines.

SOUTH-WEST AFRICA

(See UNION OF SOUTH AFRICA).

SWAZILAND—Status: Protectorate.

Capital: Mbabane (population 1,600).

Resident Commissioner: E. K. Featherstone.

Foreign trade: (included in South African customs union; chief export, live cattle).

Agricultural products: cattle, hides and skins, butter, tobacco, corn, millet.

Minerals: Tin (cassiterite) (1940: 165 tons), asbestos, gold.

Forest product: Wattle bark.

Swaziland lies in the southeastern corner of the Transvaal. It is largely hilly with an average elevation of 4,000 feet in the west. It came under the protection of the Transvaal Republic in 1894, but was made a British protectorate in 1906. The paramount native chief and other chiefs exercise jurisdiction in civil cases affecting natives only.

The natives are mostly Swazi; there were 2,740 Europeans in 1936, most of whom were farmers. Grazing is the principal native occupation. There is excellent pasture in the high land to the west. Tropical and subtropical crops are raised in the lower areas. Tin is mined near Mbabane. The country is dependent on road transportation, by motor, oxen or mule.

TANGANYIKA TERRITORY—Status: League of Nations Mandate.

Capital: Dar-es-Salaam (population 74,036).

Governor: Sir W. D. Battershill.

Foreign trade (1944): exports, £13,463,682; imports, £5,639,381; chief export, sisal.

Agricultural products: Sisal (1943 exports: 9,550 tons), coffee, cotton, groundnuts, tobacco.

Minerals: Gold (1939: 150,000 ounces), tin, mica.

Forest products: Gum arabic and copal, beeswax, timber.

Tanganyika, with Ruanda and Urundi, constituted German East Africa from 1884 until 1919. Since 1919 it has been administered under League of Nations mandate by Britain. It has a coast line of about 500 mi. The narrow coastal plain is bordered on the west by the precipitous eastern side of the central African plateau. The territory also includes adjacent islands.

The Territory is sparsely populated; about two-thirds of the total area is uninhabited. In 1942 there were 14,383 Europeans and 35,591 Asiatics. It is the world's largest producer of sisal hemp. Most of the hemp, which is of the highest grade, is grown in the drier parts of the coast belt under European supervision. Stock raising is also important but its progress is hampered by the presence of large tsetse fly areas. Cattle in 1942 numbered 5,887,826. Railway mileage in 1939 totaled 1,377 and roads, 2,027. Belgian and British steamer services operate on Lake Tanganyika, whose eastern shores are in the Territory.

UGANDA—Status: Protectorate.

Capital: Entebbe (population 7,321).

Governor: Sir John Hall.

Foreign trade: (1943) exports, \$22,730,000; imports, \$10,600,000; chief exports, cotton, tea.

Agricultural products: cotton (1943 exports: 563 tons), coffee (22,037 tons), sugar cane, rubber, tea, sisal.

Minerals: gold, tin.

Uganda lies in eastern equatorial Africa southwest of Lake Victoria. The surface is extremely diversified, with lofty plateaus, snow-capped peaks, swamps, forests, and fertile areas. A British protectorate over the area was proclaimed in 1894. A large measure of home rule is given the native states, notably Buganda, whose *kabaka* (king) is represented by a ministry and native parliament.

Agriculture, including livestock, is the basis of the economy. Cotton is raised, principally by natives, but coffee, tea and rubber are grown on large plantations. The natives possess large herds of cattle and sheep. A well-developed road system extended 7,476 miles in 1945 and railroads totaled 328 miles. In 1943 there were 72 Asiatics and 2,647 Europeans in the protectorate.

Union of South Africa (Dominion)

Area: 472,550 square miles.

Population (est. 1944): 11,068,000.

Density per square mile: 23.3.

Governor General: Gideon Brand Van Zyl.

Prime Minister: Field Marshal Jan C. Smuts.

Principal cities (census 1936): Johannesburg, 519,384 (gold, industrial center); Capetown, 344,223 (seat of legislature, seaport); Durban, 259,606 (seaport); Pretoria, 128,621 (seat of administration); Port Elizabeth, 109,841 (seaport).

Monetary unit: South African pound (£ SA).

Racial stock (1941): European, 20.7%; Bantu, 68.9%; Colored (i.e. mixed), 8%; Asiatic, 2.3%.

Languages: English, Afrikaans.

Religions (European population): Dutch Reformed Churches, 54.29%; Anglican Church, 17.22%; Methodist, 7.08%; Roman Catholic, 4.61%; Jewish, 4.52%; Others, 7.21%.

The Union of South Africa, at the southern tip of the continent, is about three times the size of California and is the richest gold and diamond producing state in the world.

After the discovery of the Cape of Good Hope in 1488 by Bartholomew Diaz, the Dutch sent the first colonists to the area in 1652. The British seized the colony in 1814. In protest against their autocratic rule, thousands of Boers, settlers of Dutch descent, trekked northward between 1835 and 1838 and set up the republics of Orange Free State and Transvaal, which were subsequently recognized by the British.

The discovery of gold in the Transvaal in 1886 brought an influx of English and other foreigners. British demands that these immigrants be enfranchised by the Transvaal government precipitated the South African War of 1898-1902, won by the British, and the Treaty of Vereeniging, on May 31, 1902, made the Boers renounce the independence of Transvaal and Orange Free State. In 1910, Cape Colony, Transvaal, Natal and the Orange Free State were set up as the Union of South Africa, with dominion status and with Louis Botha, a former Boer general, as the first premier. During World War I South African forces seized German South-West Africa, over which they later received a mandate by the Treaty of Versailles.

When World War II broke, there was considerable pro-German and anti-British sympathy in South Africa. The country went to war against the Axis, however, under the leadership of Smuts, and South African forces fought in many theaters.

The Union of South Africa, as a self-governing dominion, has its own legislature, a Senate of forty-four members elected for ten years, and a House of Assembly of 153 members elected for five years. All legislators must be Union nationals of European descent, and suffrage

is virtually limited to whites. The governor general, appointed by the English Crown after consultation with the Union, can summon or dissolve the Senate and House, but a general election must be held at least once every five years.

The elected councils in each of the four provinces have only such powers as are delegated to them. Each is headed by an administrator appointed by the central government.

Political considerations made the draft inexpedient in World War II, and all members of the armed forces were volunteers. In May of 1945, South Africa had 80,000 men serving overseas. In 1944, the armed forces included 160,000 men of European descent, and 100,000 others recruited for non-combat service. Union troops fought in Ethiopia, Libya, North Africa and Italy. The navy, only slightly expanded in World War II, has about sixty small vessels.

Education for white children is compulsory from the ages of seven to sixteen. Primary education is free and, except for vocational schools and the five universities, all education is under provincial control.

In 1941 there were 3,622 state and state-aided primary and secondary schools for European scholars who numbered 388,925, and 5,229 non-European schools with 678,161 scholars. The average number of university students was 11,801.

The official languages are English and Afrikaans. The latter, derived from 17th-century Dutch, is taught in almost all the schools. About 65 percent of the population over 7 years old understand both languages. People speaking Afrikaans as a "home" language predominate in all the provinces except Natal where most of the Asiatic population, chiefly laborers from South India, is concentrated. European and Asiatic immigration is strictly controlled.

Climate and differences in terrain combine to give a great variety of agricultural products. The staple crop is maize, grown widely with a production varying from 1½ to 3 million tons annually. In southwest Cape province, the products of the Mediterranean type predominate while in the coastal belt of Natal and in the northern Transvaal subtropical crops, especially sugar, are grown.

MAJOR AGRICULTURAL CROPS, 1939

Crop	Acres	Tons
Maize	6,214,543	2,901,968
Kafir-corn	273,382	184,612
Oats	579,963	117,663
Rye	122,029	23,561
Sugar cane	154,664	4,232,876
Wheat	1,853,711	521,648

The average annual wine production runs to about 32,500,000 gallons. Stock

raising is important in the high veldt but is curbed by animal disease in the low veldt. In 1939 there were 12,059,530 cattle, 32,055,640 woolled sheep and 6,350,106 other sheep, 6,140,116 goats, 777,590 horses and 863,119 asses. Wool production in 1940 was 137,988 tons. Ostrich farming, once important, has declined as a result of fashion changes; there were 40,265 birds in 1939.

In 1942, a total of 9,989 factories had 412,492 workers and a gross output valued at £272,875,859. Food, beverages, and tobacco and metal products led the list. As a result of the need in World War II, the Union's manufacturing now is no longer mainly devoted to agricultural processing. A wartime iron and steel industry was established and cement, chemical, textile and auto assembly plants were expanded.

Exports in 1940, excluding specie and gold bullion, came to £34,090,627, of which 40 percent went to Britain, 14 percent to the British Empire and 9 percent to the United States. Sugar, coal, corn, hides and skin, diamonds and citrus fruits led the exports. Imports totaled £105,009,934, of which 37 percent came from Britain, 24 percent from the United States and 18 percent from the British Empire. Among them were foodstuffs, cotton piece goods, electrical machinery, textiles, oil and vehicles.

The well-organized railway system mostly Union-controlled, totaled 13,251 miles in 1944. The chief ports are Durban, Capetown, Port Elizabeth and East London. Overseas shipping in 1940 totaled 12,909,734 tons net and coastwise shipping, 12,316,308 tons net. Roads suitable for motor traffic in 1938 amounted to 87,495 miles. Regular air service is available to Europe via Cairo and to the United States via West Africa and Brazil. Telephones in 1941 numbered 235,686; automobiles, 317,958 and radio sets (1944), 365,250.

Expenditures in 1946-47 were estimated at £ SA 120,510,150 and revenues at about £ SA 120,415,000 after proposed tax reductions. The public debt on Mar. 31, 1946, totaled £ SA 582,924,000. The only bank of issue is the South African Reserve Bank. Notes in circulation on Mar. 31, 1945 totaled £ SA 51,000,000; gold reserve £ SA 103,000,000; sterling balance in London £27,000,000.

The Union has a high interior plateau, or veldt, nearly half of which averages 4,000 feet in elevation. There are no important mountain ranges, although the Great Escarpment, separating the veldt from the coastal plain, rises in the Natal-Basutoland to over 10,000 feet. The principal river is the Orange, rising in Basutoland, flowing westward for 1,300 miles through the Union's center to the Atlantic.

Except for the western semi-arid regions the climate is generally subtropical, much

ke that of northern Florida. Rainfall averages about 40 inches a year on the east coast and decreases sharply westward.

The Union is the world's leading gold producer, mined from deposits in Witwatersrand and the Transvaal. The 1940 gold output was £1,874,593,973. Diamond production, in the Kimberly district on the Cape Orange-Free State border, is now surpassed in importance by coal. Mineral production for 1943 included: asbestos, 1,661 tons; coal, 22,660,000 tons; iron ore, 1,932 tons; manganese ore, 219,122 tons; platinum, 40,654 ounces; and silver, 1,334,422 fine ounces. Output for 1944 included: copper, 24,800 tons; gold, 12,227,228 ounces; 4 diamonds, 698,525 carats. Chrome, pyrite, lead, tin and tungsten also are mined.

Forests cover only a small portion of the Union, and are mostly in the east. The maling industry, centered at Durban on the east coast, produced 2,472,909 gallons of whale oil in 1939. The fish catch of 1,180 tons was valued at \$2,371,759.

SOUTH-WEST AFRICA. *Status:* Mandate. *Area:* 317,725 square miles. *Population* (est. 1941): 321,000. *Capital:* Windhoek (pop. 1936: 10,651). *Administrator:* Col. P. Hoogenhout. *Foreign trade* (1943): exports, £6,639,618; imports, £3,315,966; chief exports, karakul skins, butter, slaughter animals, diamonds. *Agricultural products:* hides and skins, butter, corn, wheat. *Minerals* (1944): diamonds, 154,000 carats; radium, 424,000 tons; tungsten, 100 tons; lead, tin, iron ore and copper.

The area, bounded on the north by Angola, and on the east by Bechuanaland Protectorate and the Union of South Africa, was discovered by the Portuguese explorer Diaz in the late 15th century. It was for the most part a portion of the high plateau of South Africa with a general elevation of from 3,000 to 4,000 feet. It became a German colony in 1884 but was conquered by South African forces in 1915, coming a union mandate by the terms of the Treaty of Versailles. Most of the German nationals accepted an offer of British naturalization in 1923, but following the closure in 1939 of a strong Nazi organization in the mandate, most of the naturalized Germans were returned to their previous German status. The administrator is appointed by the Union Government. There is a legislative council, locally nominated and partly elected by European males of British nationality.

The country in general is better suited to grazing than for the raising of crops because of light rainfall. The karakul sheep industry is particularly well-developed; in 1943 2,327,653 pelts were exported. The Union accounts for almost all imports and about 40 percent of the exports. In 1936 there were 30,677 Euro-

peans (9,634 German-speaking) and 65,373 half-castes in the mandate. Most of the natives live on large reserves. The principal port is Walvis Bay. Railways in 1938 totaled 1,493 miles.

ZANZIBAR—Status: Protectorate.

Capital: Zanzibar (population 1931: 45,276).

Sultan: Seyyid Sir Khalifa bin Harub.

British Resident: Maj. E. A. T. Durrone.

Foreign trade (1943): exports, \$4,570,000; imports, \$4,360,000; chief export, cloves.

Agricultural products: cloves (1939: 14,769 tons), copra, sisal.

The protectorate consists principally of the islands of Zanzibar (640 square miles) and Pemba (380 square miles), just off the east African coast. Before 1890, the sultanate's territory also included a large area on the mainland, now comprising Italian Somaliland, Kenya and Tanganyika. It was proclaimed a British protectorate Nov. 4, 1890. The British resident administers the government, but the sultan still retains considerable authority. There is an Executive Council headed by the sultan and a nominated Legislative Council.

The principal industry is the production of cloves; Zanzibar produces 80 percent of the world supply.

WESTERN HEMISPHERE

BAHAMAS—Status: Colony.

Capital: Nassau (population 1943: 29,391).

Governor: W. L. Murphy.

Foreign trade (1944): exports, £337,047; imports, £1,735,899; chief exports, tomatoes, straw hats.

Agricultural products: tomatoes, citrus fruit, sisal.

Sea products: sponges, lobsters.

The Bahamas are an archipelago of about 3,000 islets, cays and rocks, east of Florida and north of Cuba, extending from N.W. to S.E. for about 800 miles. Only about 20 of the islands are inhabited; the most important is New Providence (20 square miles) on which Nassau is located. The islands were reached by Columbus in Aug. 1492 and were a favorite pirate resort in the early 18th century. They have been a Crown colony since 1717. The constitution provides for a nominated legislative council and a popularly elected assembly. The governor is advised by an Executive Council.

About 85 percent of the population is Negro. The tourist trade is of considerable importance, especially at Nassau which is a favorite winter resort. Agriculture, except for tomato and sisal culture, is of little importance. Straw and shellwork are the principal industries of the natives. A Royal Air Force unit is stationed in the archipelago.

BARBADOS—Status: Colony.**Capital:** Bridgetown (population 15,000).**Governor:** Sir H. Gratton Bush.**Foreign trade (1943):** exports, £2,338,539; imports, £2,888,349; chief export, sugar.**Agricultural products:** sugar (1943: 133,273 tons), cotton.**Manufactures:** rum (1943: 4,363,548 wine gallons).

Barbados, an island east of the Windward group in the West Indies, has been a British possession since 1627. The colony has a nominated Legislative Council and a popularly elected Assembly of 24 members, but the Crown, represented by the governor, retains the veto power.

The island is very densely populated (about 1,200 per square miles). About 70 percent of the inhabitants are Negro, 7 percent white and the remainder of mixed blood. About 70 percent of the total area is cultivated and half of this is devoted to sugar which is the staple product; there are 100 sugar and molasses plants and 3 rum distilleries. Fishing is an important seasonal industry. Mineral production is limited to small amounts of asphalt and petroleum.

BERMUDA—Status: Colony.**Capital:** Hamilton (population 1939: 1,863).**Governor:** Admiral Sir Ralph Leatham.**Foreign trade:** exports (1940), \$320,000; imports (1943), \$10,417,000; chief export, lily bulbs.**Agricultural products:** lily bulbs, potatoes, vegetables, arrowroot.

Bermuda is an archipelago of about 360 small islands 580 miles east of North Carolina. Discovered by Juan Bermudez, a shipwrecked Spaniard, early in the 16th century, the islands were settled in 1612 by an offshoot of the Virginia Company and became a Crown colony in 1684. The governor is assisted by nominated Executive and Legislative Councils and a popularly elected Assembly of 36 members. In 1940 sites on the islands were leased for 99 years to the U. S. as air and navy bases. Bermuda is also the headquarters of the West Indies and Atlantic squadron of the Royal Navy. The most important factor in the colony's economy is the tourist trade. Most supplies must be imported.

BRITISH GUIANA—Status: Colony.**Capital:** Georgetown (population 1943: 73,171).**Governor:** Sir Gordon James Lethem.**Foreign trade (1943):** exports, \$19,489,288; imports, \$20,732,500; chief exports, sugar, bauxite, gold.**Agricultural products:** sugar (1943: 131,186 long tons), rice, copra, coffee.**Minerals:** bauxite (1944: 1,023,100 tons), gold (1940: 35,745 ounces), diamonds.**Forest products:** balata, timber.

Located on the northeastern coast of South America between Venezuela and Su-

rinam, British Guiana was settled by the Dutch in the mid-17th century. It was occupied by the British in 1796 and ceded to them at the end of the Napoleonic Wars. Behind the low plain which contains the agricultural area is a somewhat higher area containing forest and mineral resources. The governor is assisted by an Executive Council; the Legislative Council has an elected majority.

The heterogeneous population contains about 143,000 East Indians, 131,000 Negroes, 9,000 Portuguese, 2,000 other Europeans, 42,000 of mixed blood, 3,600 Chinese and 9,000 aborigines. The cultivated area covers only 155,000 acres, mostly devoted to rice and sugar cane. About 86 percent of the colony is forested, but the vast forest resources are relatively unexploited. Railway mileage is 110, and highway, 677, but communication to the interior is mainly by steamer and launch. The colony is second only to the U. S. in bauxite production.

BRITISH HONDURAS—Status: Colony.**Capital:** Belize (population 1931: 16,687).**Governor:** Sir John A. Hunter.**Foreign trade (1942):** exports, \$1,252,000; imports, \$3,964,000; chief exports, cedar and mahogany.**Agricultural products:** bananas, sugar cane, citrus fruits.**Forest products (1938):** cedar logs (414,000 board feet) and lumber (10,000 board feet), mahogany logs (814,219 cubic feet) and lumber (228,060 cubic feet); chicle (450 tons).

This Caribbean colony is bounded on the north by Yucatan and on the west by Guatemala. It was settled in 1662 by woodcutters from Jamaica. An irregular form of local government continued until 1871 when it became a Crown colony. The governor is assisted by an Executive Council and a partly elected Legislative Council.

The colony's economy is dependent upon timber and other forest exports. Agriculture has never been adequately developed. There are no railways and road development is backward. The majority of the population are mestizos of Negro, native Indian, and white descent. Whites number less than 2,500.

Canada (British Dominion)**Area:** 3,466,556 square miles.**Population (census 1941):** 11,506,655.**Density per square mile:** 3.3.**Governor General:** Field Marshal Viscount Alexander of Tunis.**Prime Minister:** W. L. Mackenzie King.

Principal cities (census 1941): Montreal, 903,007 (seaport); Toronto, 667,457 (manufacturing center); Vancouver, 275,353 (Pacific seaport); Winnipeg, 221,960 (grain); Hamilton (Ontario) 166,337 (iron and steel); Ottawa, 154,951 (capital); Quebec, 150,757 (seaport); Windsor, 105,311 (automobiles).

Monetary unit: Canadian dollar.

Racial stock (census 1941): British, 50%; French, 27%; German, 4% Ukrainian, 2%; Others, 17%.

Languages: English, French.

Religions (census 1941): Roman Catholic, 62%; United Church, 19%; Anglican, 15%; Presbyterian, 8%; Baptist, 4%; Others, 12%.

HISTORY. The Norse explorer Leif Ericsson probably reached the shores of Canada about 1000 A. D., but the history of the white man in the country actually began in 1497, when John Cabot, an Italian in the service of Henry VII of England, reached the shore of Newfoundland or Nova Scotia. Canada was taken for France in 1534 by Jacques Cartier. The actual settlement of New France, as it was then called, began in 1603 at Port Royal in what is now Nova Scotia, and 1608 Quebec was founded. French colonization efforts were not very successful, but French explorers by the end of the 17th century had penetrated beyond the Great Lakes to the western prairies and south along the Mississippi to the Gulf of Mexico. Meanwhile, in the North, the English Hudson's Bay Company had planted itself on Hudson Bay in 1670. Because of the valuable fisheries and fur trade, a conflict developed between the French and English; in 1713 Newfoundland and Acadia were lost to England and in 1763 Canada came under English control.

At this time the population of Canada was almost entirely French, but in the next few decades thousands of British colonists emigrated to Canada from the

British Isles and from the American Colonies. Partly to placate the French who were concentrated in Quebec, Canada was divided into Upper (British) and Lower (French) Canada in 1791. In 1840 the two provinces again were joined under one government and in 1849 Canada was given the right of self-government. By the British North America Act of 1867 the Dominion of Canada was created through the confederation of Upper and Lower Canada, Nova Scotia and New Brunswick. Prince Edward Island joined the Dominion in 1873 and in 1869 Canada purchased from the Hudson's Bay Company the vast middle west (Prince Rupert's Land) from which the provinces of Manitoba (1870), Alberta and Saskatchewan (1905) were carved. In 1871 British Columbia joined the Dominion. The country was linked from coast to coast in 1886 by the Canadian Pacific Ry.

During the formative years between 1867 and 1896, the Conservative Party led by Sir John A. Macdonald governed the country. In 1896 the Liberal Party took over and under Sir Wilfrid Laurier, an eminent French Canadian, ruled until 1911. At the outbreak of World War I, Canada joined England; more than 500,000 Canadian soldiers fought for the Allied cause. After the Treaty of Versailles, Canada, a full-fledged nation, was admitted to the League of Nations and appointed its own representatives in foreign countries. By the Statute of Westminster, 1931, the British Dominions, including Canada, were for-

Canadian Governors General and Prime Ministers Since 1867

Term of office	Governor General	Term of office	Prime Minister	Party
1861-1868	Viscount Monck	1867-1873	Sir John A. Macdonald	Conservative
1868-1872	Baron Lisgar			
1872-1878	Marquess of Dufferin and Ava	1873-1878	Alexander Mackenzie	Liberal
1878-1883	Marquess of Lorne	1878-1891	Sir John A. Macdonald	Conservative
1883-1888	Marquess of Lansdowne	1892-1894	Sir John S. D. Thompson	Conservative
1888-1893	Baron Stanley of Preston	1894-1896	Sir Mackenzie Bowell	Conservative
1893-1898	Earl of Aberdeen	1896 (2 mos)	Sir Charles Tupper	Conservative
1898-1904	Earl of Minto	1896-1911	Sir Wilfrid Laurier	Liberal
1904-1911	Earl Grey	1911-1917	Sir Robert L. Borden	Conservative
1911-1916	Duke of Connaught	1917-1920	Sir Robert L. Borden	Unionist
1916-1921	Duke of Devonshire	1920-1921	Arthur Meighen	Unionist National Conservative
1921-1926	Viscount Byng of Vimy	1921-1926	W. L. Mackenzie King	Liberal
1926-1931	Viscount Willingdon	1926 (3 mos)	Arthur Meighen	Conservative
1931-1935	Earl of Bessborough	1926-1930	W. L. Mackenzie King	Liberal
1935-1940	Baron Tweedsmuir	1930-1935	Richard B. Bennett	Conservative
1940-1946	Earl of Athlone	1935-	W. L. Mackenzie King	Liberal
1946-	Field Marshal Viscount Alexander			

mally declared to be partner nations with Britain and the British Empire equal in status, bound together only by allegiance to a common Crown. The Liberal Party under W. L. Mackenzie King won the elections in 1935 and was returned to power in 1940 and 1945. The Prime Minister's request for authority to send drafted men overseas during World War II was overwhelmingly approved by direct national vote in April 1942 with only the province of Quebec, which is mostly French, voting against it.

PROVINCES AND TERRITORIES

Provinces	Land area (sq. mi.)	Population (census of 1941)
Alberta	248,800	796,169
British Columbia	359,279	817,861
Manitoba	219,723	729,744
New Brunswick	27,473	457,401
Nova Scotia	20,743	577,962
Ontario	363,282	3,787,655
Prince Edward Island	2,184	95,047
Quebec	523,534	3,331,882
Saskatchewan	237,973	895,992
Territories		
Northwest Territories	1,258,217	12,028
Yukon	205,346	4,914

GOVERNMENT. Canada, one of the five self-governing dominions of the British Empire, is a federal union of 9 provinces whose powers are laid down in the British North America Act of 1867. This Act is the fundamental law of the Canadian Constitution. The executive powers nominally rest in the hands of the Governor General, who represents the King and is appointed by the British Government. Actually, the Governor General acts only with the advice of the Canadian Prime Minister and the members of the Cabinet who at the same time sit in the Dominion Parliament. The Parliament has two houses: a Senate numbering 96 members appointed for life, and a House of Commons numbering 245 members apportioned according to provincial population. Elections are held whenever the party in power is voted down in the House of Commons or considers it expedient to appeal to the people on its record; but Parliament may not continue in office longer than 5 years. The Prime Minister is the leader of the party which wins the majority of the seats in the House of Commons at an election. Laws, to become effective, must be passed by both houses of Parliament and signed by the Governor General in the King's name. The results of Parliamentary elections on June 11, 1945 were as follows: Liberals, 118; Progressive Conservatives, 66; Cooperative Commonwealth Federation, 28; Social Credit, 13; Populaire Canadien, 2; Labor Progressive, 1.

The members of the Cabinet include: W. L. Mackenzie King (Prime Minister and

External Affairs), W. McL. Robertson (Minister without Portfolio), J. A. Glen (Mines and Resources), Louis S. St. Laurent (Justice and Attorney General), Alphonse Fournier (Public Works), Lionel Chevrier (Transport), Ian A. Mackenzie (Veterans Affairs), J. L. Ilsley (Finance), H. F. G. Bridges (Fisheries), C. D. Howe (Supply and Reconstruction), J. G. Gardiner (Agriculture), James U. McCann (National Revenue), Humphrey Mitchell (Labor), J. A. Mackinnon (Trade and Commerce), Paul Joseph Martin (Secretary of State), Ernest Bertrand (Postmaster General), Colin Gibson (Air), Douglas C. Abbott (Army and Naval Services), Brooke Claxton (National Health and Welfare) and Joseph Jean (Solicitor General).

The nine provincial governments are nominally headed by Lieutenant Governors appointed by the Dominion Government, but the executive power actually is vested in the Cabinet headed by a Prime Minister who is the leader of the majority party. In eight out of the nine provinces the legislature is composed of a one-house legislative assembly elected by the people for a term of 5 years. In Quebec there is also a second chamber, called the legislative council, composed of nominees of the Provincial Government. To each province are reserved certain powers, among the most important of which are the rights to make laws concerning education and water power.

JUDICIAL SYSTEM. The judicial system consists of a supreme court in Ottawa with appellate jurisdiction and a supreme court in each province as well as county courts with limited jurisdiction in most of the provinces. The Governor General in Council appoints the judges of these courts. English common law is used, except in Quebec, where civil law is used in civil cases.

DEFENSE. Canadian armed forces, consisting of the Army, Royal Canadian Air Force and the Royal Canadian Navy, are under the Ministry of National Defense. The Army, which had a strength of only 4,500 regulars in 1939, had grown to almost 500,000 by May 1945; of these almost 300,000 were on overseas duty. During the war the strength of the air force rose to a maximum of over 200,000, about a third of whom served overseas. The Navy, which was composed of 13 ships and 1,800 personnel in 1939, reached a wartime peak of 370 ships, 550 patrol vessels and over 95,000 personnel. Total Canadian casualties in the war were 104,125, including 41,371 dead. Conscription was in effect during the war under the National Resources Mobilization Act of 1940, but the conscripts were employed principally for home defense services, and only a few saw overseas service. Almost all of Canada's overseas force were composed of volunteers.

The Royal Canadian Mounted Police is the constabulary maintained by the Dominion Government. In 1943 it had a strength of about 5,000. Its duties include the enforcement of smuggling laws, suppression of traffic in drugs and protection of government buildings and dockyards. It is the sole police force operating in the Yukon Territory and the Northwest Territories.

EDUCATION. Control of education is specifically delegated to the provinces by the British North America Act of 1867. Elementary schools in all provinces except Quebec are free, and the same is true of secondary education in most provinces. The supreme education authority in Quebec is a council of public instruction with two aides supervising the Roman Catholic and Protestant schools respectively. Fees paid by parents having children of school age help defray the cost of education. In the rest of the provinces the system is non-denominational, and education for the most part is compulsory for all children between the ages of 8 and 14. Of Canada's 13 universities, 6 are state controlled and 7 are independent of provincial control. The two leading universities are Toronto, which belongs to the first group, and McGill (Montreal) which belongs to the second group.

VITAL STATISTICS. In 1942 the birth rate was 23.4 per 1,000 population and the death rate 9.7 per 1,000. During the same year the marriage rate was 10.9 per 1,000. The immigration movement reached its peak in 1913, when 402,432 immigrants were enumerated. Immigration fell off sharply during World War I but rose in the post-war years to a peak of 167,723 in 1929. Immigration for the year 1945 totaled 15,306.

AGRICULTURE. Agriculture, including horticulture, fruit-growing and the raising of stock and poultry, is the largest single industry. Of the total land area, 549,660 square miles of 15.8 percent, consists of agricultural land. Canadian farming is based almost entirely on relatively small individual holdings. Canada is one of the world's greatest wheat-exporting countries; production is concentrated in Manitoba, Saskatchewan and Alberta. Canada is a leading producer of other cereals. Apple growing, carried on in Nova Scotia, southern Quebec and central Ontario, is the chief feature of horticulture; other fruit growing regions are the Niagara and Lake Huron districts and southern British Columbia. Sugar beet cultivation is assuming increasing importance. Tobacco is produced in southern Ontario. The production of honey and maple sugar is also important. The estimated value of field crops in 1945) was \$1,098,859,000.

MAJOR AGRICULTURAL CROPS 1943

Crop	Acreage	Tons
Barley	8,397,000	5,173,488
Flaxseed	2,948,000	501,508
Oats	15,407,000	7,712,352
Potatoes	533,000	2,438,296
Rye	576,000	200,004
Wheat	17,488,000	8,809,000

Stock raising and dairy farming has grown greatly since 1920. Ontario and Quebec are the most important dairying provinces. In 1943 Canada had 9,665,000 cattle, 8,148,000 swine, 3,459,000 sheep, 2,775,000 horses, and 79,134,000 poultry. Dairy production (1945) included butter, 94,493,000 pounds, milk, 17,600,000,000 gallons and eggs, 395,019,000 dozen. Animals slaughtered (1945) included: cattle, 1,747,362; calves 768,427; hogs 5,477,325 and sheep 1,133,980.

INDUSTRY. Canadian manufactures rely mainly on domestic raw materials; growing industries which depend largely on materials imported in a raw or semi-finished state include the manufacture of automobiles, sugar and rubber goods as well as the iron and steel industry in Nova Scotia, Quebec and Ontario. The latter two provinces account for over 80 percent of all manufactures. The abundance of cheap water power is one of the chief factors in the growth of Canadian industry. Estimated steel production (1945) was 2,836,000 tons. In 1941 there were 26,293 industrial establishments with 961,178 workers and an output valued at \$5,523,910,952. Most important, in order of value of output, were: food, \$812,313,022; textile, \$313,503,760; clothing, \$292,348,851; chemical, \$276,727,513; and electrical, \$161,730,407.

TRADE. Canada is one of the great trading nations of the world. The bulk of its trade is in raw or semi-finished products. Commodities exported in 1943 were valued at \$2,701,338,000. The 12 major exports for that year were automobiles 8.1 percent; wheat, 7.19 percent; newsprint, 4.9 percent; meat, 4.4 percent; aluminum, 4.2 percent; wood pulp, 3.4 percent; lumber, 2.5 percent; wheat flour, 2.2 percent; nickel, 1.9 percent; fish, 1.9 percent; furs, 0.9 percent; beans, 0.9 percent. The principal destinations for these exports in 1943 included: United States, 38.7 percent; United Kingdom, 34.7 percent; Australia, 1.6 percent; Newfoundland, 1.4 percent; British South Africa, 1.2 percent.

Imports for the year 1943 totaled \$1,577,341,000. Major sources of imports included: United States, 82.1 percent; United Kingdom, 7.8 percent; New Zealand, 1.4 percent; India, 1 percent; Australia, 0.7 percent. The principal imports were machinery, coal, automobile parts, petroleum, rolling-mill products, cotton goods, electrical apparatus, engines and boilers, fruit, raw cot-

ton, raw wool, sugar, aluminum, woolen goods, rubber products and farm implements.

COMMUNICATIONS. Because Canada's exports are to a large extent bulky raw materials, cheap water transportation is essential. The country's system of canals, especially those connecting the Great Lakes, forms an integral part of the inland communications system. Canal traffic mounted to 20,899,639 tons in 1942 and 21,476,194 tons in 1943. In 1943, 23,472 vessels passed through the Canadian canals.

Railway facilities have been improved in relation to the export of wheat from the prairie provinces and to the development of the mineral and wood pulp industries in northern Quebec and northern Ontario. About 90 percent of Canadian railway mileage (42,742 miles) is under the control of two systems, the government-owned Canadian National (22,799 miles) and the privately-owned Canadian Pacific (17,153 miles). Total capitalization in 1940 was \$3,380,033,172. Freight carried by the Canadian National during 1945 was estimated at 78,900,000 tons and passengers 32,000,000. Canadian Pacific revenue freight was estimated at 55,220,951 tons and passengers at 18,180,765 for the period Nov. 1944-Nov. 1945. Canada's principal merchant marine lines are the Canadian Pacific, which operates a subsidiary ocean steamship company, and the Canadian National, which has minor steamship lines under its control. In 1941 the total tonnage entered at Canadian ports was 79,536,482. In 1942 Canada had 564,538 miles of roads, of which 122,689 were improved and 441,849 unimproved. Motor vehicles had increased to 1,500,829 by 1940. Each province has its own system of regulation.

Canada's national air service, the Trans-Canada Air Lines, was established in 1937. The number of revenue passengers carried in 1944 was 388,719, and 15,453,029 revenue miles were flown. Revenue freight amounted to 10,812,867 pounds and mail to 6,716,167 pounds. In 1944 Canada had 1,692,162 telephones and in 1945, 1,759,100 licensed radio sets. In 1942 there were 102 radio broadcasting stations and 52,418 miles of telegraph lines.

FINANCE. Estimated revenue (1944-45) was \$2,697,000,000; expenditure \$5,152,000,000. The total national debt (Mar. 31, 1945) was \$11,298,400,000.

TOPOGRAPHY. Canada may be divided roughly into five regions: (1) The so-called Archaean Protaxis—including all of Labrador, most of Quebec, northern Ontario, northern Manitoba, and the Northwest Territories with Hudson Bay in the center—which is an important source of minerals, water power, and wood pulp. (2) The Acadian region—the maritime prov-

inces of eastern Canada, including Nova Scotia, New Brunswick, Prince Edward Island, and the analogous southeastern part of Quebec—which with a very irregular and extended coast line on the Gulf of St. Lawrence and the Atlantic, may be regarded as a northern extension of the Appalachian range. (3) The St. Lawrence plain—covering most of southern Quebec and southern Ontario—which affords the largest stretch of cultivable land in eastern Canada. The region is separated from the prairies by a plateau of wild forest lands rising from Lakes Superior and Huron; (4) The interior continental plain—comprising the southern parts of Manitoba and Saskatchewan and most of Alberta—which ranges in width from 800 miles at the U. S. border to less than 400 miles at the Arctic Ocean and which has the most fertile soil in Canada; and (5) The Cordilleran belt—covering all of British Columbia and the Yukon territory and a part of western Alberta—which is made up of several parallel ranges of mountains, the eastern one constituting the Rocky Mountains proper. The Pacific border of the coast range is ragged with fjords and channels.

CLIMATE. Canada has great variations of climate. South of the Gulf of St. Lawrence the Maritime provinces average 40° for the year and over 60° for the summer months. In Quebec and northern Ontario the winters are cold and the summers average from 60 degrees to 65 degrees. In southern Ontario the average summer temperature is 65, with an occasional rise to 90. The prairie provinces have a distinctly continental climate with comparative short warm summers and long cold winters. In the mountain regions of the west coast the climate is extremely varied and the coast itself has a climate similar to the southern coast of England. Northwest and northeast of Hudson Bay the climate is too severe for the growth of trees.

HYDROGRAPHY. Canada has an abundance of lakes large and small. In addition to the Great Lakes on the United States border, there are nine others which have a length of more than 100 miles and 35 which are more than 50 miles long.

The two principal river systems are the Mackenzie and the St. Lawrence. The St. Lawrence with its tributaries is navigable for over 1,900 miles and is the commercial artery of eastern Canada. The northern parts of Alberta and Saskatchewan and much of northern British Columbia are drained through the Athabasca and Peace Rivers, first northeastward towards Athabasca Lake and then north through Slave River to Great Slave Lake and finally northwest through the Mackenzie River to the Arctic Ocean. If measured to the head of Peace River, the Mackenzie has a length

more than 2,000 miles and is navigable for 1,292 miles.

As most of the Canadian rivers have waterfalls on their courses they are of much importance as sources of power. On January 1, 1944 the available horse power at ordinary six months flow was 39,511,700; on the same date turbine installations accounted for 10,214,515 h.p. The number of power plants in 1942 was 616 and the capital invested \$1,747,891,789.

MINERALS. Metals mined in Canada come mainly from two widely separated regions, the mountain ranges of the Pacific coast and the province of Ontario. Deposits of copper ore also exist in Quebec and Manitoba.

MAJOR MINERALS 1942

Mineral	Amount
Asbestos	439,459 tons
Coal	18,864,030 tons
Copper	301,831 tons
Gold	2,651,250 oz.*
Lead	256,071 tons
Nickel	142,606 tons
Petroleum	10,364,796 bbl.
Silver	12,778,859 oz.*
Sulphur	303,714 tons
Zinc	290,129 tons

*1945.

FORESTS, WILD LIFE, AND FISHERIES. The total area of land covered by forests is estimated at 1,220,405 square miles, of which 770,565 square miles are productive and accessible. Lumber production in 1943 was 4,640,000,000 board feet. The manufacture of pulp and paper is one of Canada's leading industries. Fishing is Canada's oldest industry, and is carried on along the Atlantic and Pacific coasts and on the inland lakes. The most important fish are salmon, cod, herring, mackerel, sardines, halibut and haddock. The total value of the products of Canada's fisheries in 1942 was over \$70,000,000.

Fur farming and trapping is also important. Trapping is carried on principally in the North while Quebec, Ontario and Prince Edward Island lead in the number of fur farms. The more important animals raised on fur farms are fox, muskrat, beaver, mink, raccoon, martin and fisher. For the years ending June 30, 1943, 7,355,304 pelts valued at \$27,694,164 were taken. Annual fur auctions are held at Montreal and Winnipeg.

FALKLAND ISLANDS AND DEPENDENCIES

This sparsely inhabited crown colony consists of a group of islands in the South Atlantic about 330 miles east of the Straits of Magellan. The chief industry is sheep raising and apart from the production of wool (1938: 2,000 tons), hides and skins and tallow, there are no known resources. Sheep number about 600,000. The whaling

industry is carried on successfully from South Georgia island; 77,817 barrels of whale oil were exported in 1941. Stanley Harbor was an important naval base during World War II. The governor is Sir Allan W. Cardinell.

JAMAICA AND DEPENDENCIES—Status: Colony.

Capital: Kingston (population 1943: 109,056).

Governor: Sir John Huggins.

Foreign trade (1942): exports, £3,840,488; imports, £5,515,034; chief export, sugar.

Agricultural products: sugar (1945: 152,226 long tons), citrus fruits, bananas, ginger, coffee, pimento (1938: 4,336 tons).

Jamaica, the largest island in the British West Indies (4,470 square miles) is eighty miles south of the eastern end of Cuba. Its island dependencies include the Turks and Caicos Islands (165.5 square miles), Cayman Islands (104 sq. mi.) and two uninhabited cays. It was discovered by Columbus in 1494 and remained in Spanish possession until 1655 when it was taken by the British. According to the new constitution (Nov. 20, 1944) the Governor is assisted by a House of Representatives of 32 popularly elected members; a Legislative Council (upper house) of 15 members and an Executive Council of 10 members, 5 of whom are elected by the House of Representatives. Every person over 21 has the vote. Jamaican sites were leased for 99 years to the U. S. in 1940 for naval and air bases.

The colony's economy depends on agriculture. About 200,000 acres are under cultivation. Sugar took the place of bananas as the chief crop during World War II. Jamaica is virtually the sole source of pimento. Manufactures of consumer's goods have shown considerable increases in recent years. The population (1943) included 14,793 whites, 216,250 mulattoes, and 965,944 Negroes in addition to several thousand East Indians and Chinese. Rail mileage totals 299 and highways 2,525. Air service is furnished by Pan American, British West Indies Airways and KLM.

LEEWARD ISLANDS—Status: Colony.

Capital: St. John's (Antigua) (population 10,000).

Governor: Sir Leslie Brian Freeston.

Foreign trade (1943): exports, £1,005,978; imports, £1,009,978; chief export, sugar.

Agricultural products: sugar, cotton, coconuts, citrus fruits, tobacco.

The Leeward Islands are a federated group of islands southeast of Puerto Rico, and divided into four presidencies—Antigua (108 square miles) and Dependencies (63 square miles); Virgin Islands (67 square miles); St. Kitts (68 square miles) and Nevis (50 square miles) and Dependency (34 square miles); and Montserrat (32.5 square miles). The whole federation

has a nominated Executive Council and a partially elected Legislative Council. Each presidency also has a local administration. The U. S. acquired in 1940 a 99-year lease on a naval and air base on Antigua. The islands are predominantly agricultural.

NEWFOUNDLAND AND LABRADOR—Status: Colony (dominion status suspended).

Capital: St. John's (population 1943: 55,000).

Governor: Sir Gordon Macdonald.

Foreign trade (1943-44): exports, \$38,543,-066; imports, \$56,807,806; chief export, paper.

Agricultural products: potatoes.

Minerals: iron ore (1944: 520,000 tons), lead ore, zinc, copper, gold, limestone, silver.

Forest products (1943): lumber (42,000,000 board feet), newsprint (240,000 tons), pulpwood (85,000 tons).

Sea products (1943): total exports, \$16,285,-024; cod (55,462 tons), herring, salmon, lobster.

The island of Newfoundland (42,734 square miles) is east of Canada at the mouth of the Gulf of St. Lawrence. Its mainland dependency, Labrador (110,000 square miles; pop. about 5,000) is to the northwest, across the Strait of Belle Isle.

It was discovered by John Cabot in 1497 and annexed to Britain in 1583. France recognized British sovereignty by the Treaty of Utrecht in 1713, but retained important fishing concessions. Newfoundland was a self-governing colony until Feb. 15, 1934, when financial difficulties forced suspension of its constitution. Full legislative and executive power is now vested in a governor who acts on advice of a six-member commission—three from Newfoundland and three from the United Kingdom. In January, 1941, several sites were leased to the United States for military bases.

Fishing is the main industry; Newfoundland's waters abound in cod. Over half the colony is forested, and the making of newsprint is the second industry. Agriculture is of little importance but there are extensive mineral resources. The international airport at Gander is used by half a dozen lines flying the North Atlantic.

TRINIDAD AND TOBAGO—Status: Colony.

Capital: Port of Spain (population 1942: 100,-585).

Governor: Capt. Sir Bede E. Clifford.

Foreign trade (1943): exports, \$42,030,774; imports, \$59,788,779; chief export, petroleum.

Agricultural products: sugar (1943: 70,920 tons), cocoa, coconuts.

Minerals: petroleum (1944: 22,000,000 barrels), asphalt.

The islands of Trinidad and Tobago are twelve and twenty-one miles, respectively, off Venezuela just north of the mouth of the Orinoco. Both were discovered by Columbus in 1498, and remained Spanish possessions until 1797 when the British took them. They are administered by a governor. In 1941 the United States was

granted ninety-nine-year leases on the islands for naval and air bases covering a total of 25,000 acres.

The soil is rich for the growing of tropical products. Cacao is the principal crop of both islands. Trinidad is the leading oil producer of the British Empire, and the world's most notable source of asphalt, found in Pitch Lake, thirty-eight miles southeast of Port of Spain. Port of Spain is the chief port, and a trans shipment point for Orinoco trade. About a third of the population is East Indian stock. Of the rest, the upper classes are Creoles of British, Spanish and French blood; the lower classes are Negro or various mixtures.

ASIA

Aden (See ARABIA).

Aden Protectorate (See ARABIA).

Colony and Protectorate of Aden (British)

The British colony and protectorate of Aden is situated on the volcanic southern tip of the peninsula with a 50-mile coast line on the Gulf of Aden. The colony (port) of Aden was annexed to Britain in 1839 as part of the Bombay Presidency until 1932 when it became a separate province with the chief commissioner responsible to the Indian government. In 1937 it was transferred from Indian to Imperial control as a crown colony. It is administered by a governor and commander in chief aided by an executive council. The sultans who rule their respective territories in the protectorate are responsible to him.

Aden colony is essentially a transshipment point and bunkering station and the commercial center for the Yemen and the African coast opposite. Aden Airport is a station on the Khartoum-Karachi air route. Agriculture is unimportant except for some coffee and tobacco and manufactures are limited to salt, cigarettes and native dhows. Exports in 1939 were \$18,-039,900 and imports, \$10,795,200.

Bahrein Islands (See ARABIA).

Bahrein Islands (Sheikhdom)

This archipelago off Arabia's east coast is nominally an independent sheikhdom, ruled by Sheikh Sir Salman bin Hamad al Khalifa but actually a protectorate of Great Britain which is represented by a political agent. It is the center of the Persian Gulf pearl fisheries and the site of an airport on the London-Australia route. The concession for exploitation of petroleum deposits, discovered in 1932, is held by an affiliate of the California-Arabian Standard Oil Company. Output in 1943 was 6,000,000 barrels. Agriculture is of some importance. Most of the trade of

the Saudi Arabian provinces of Nejd and Hasa pass through Bahrain. Exports in 1939, excluding petroleum, totaled \$6,936,-\$71; imports \$9,093,896. Chief exports are rice, cotton goods, pearls, coffee and tea. The capital and principal port is Manama (population 25,000) on Bahrain, the principal island.

BORNEO

BRITISH NORTH BORNEO—Status: Colony.

Capital: Sandakan (population 1931: 13,826).

Officer in charge of administration: James Calder.

Foreign trade (1939): exports, \$7,088,000; imports, \$3,489,000; chief export, rubber.

Agricultural products: rubber (1938: 13,322 tons), rice, corn.

Forest products: timber, cutch, rattans.

This colony, constituting the extreme northern portion of the island of Borneo, consists largely of highlands and occasional pen valleys and plateaus. The territory was a British protectorate administered under a royal charter granted in 1881 by the British North Borneo Company until July 1, 1946, when it assumed the status of a Crown colony. It was occupied by Japanese troops from 1942 until 1945.

The population is comprised largely of aboriginal tribesmen living on a very primitive level of culture and social organization. Mineral resources are believed to be considerable, but the colony's present wealth is based on agricultural and jungle produce.

BRUNEI—Status: Protectorate.

Capital: Brunei (population 1937: 10,453).

Sultan: Ahmed Tajudin Akhagul Khairi Wad-din.

British resident:

Foreign trade (1939): exports, \$4,067,000; imports, \$1,683,000; chief export, petroleum.

Agricultural products: rice, rubber (1937: 832 tons).

Mineral: petroleum (exports 1940: 869,000 tons).

The protectorate lies on the northwestern coast of Borneo, entirely surrounded by Sarawak. It was placed under British protection in 1888 and on January 2, 1906, a treaty was made whereby the native sultan agreed to hand over administration of the state to a British resident. Supreme authority is vested in the Sultan in Council in which the resident is a member. Japanese troops occupied Brunei from 1942 until 1945.

Most of the inhabitants are Malays; in 1911 there were 60 Europeans, 377 Indians and 2,683 Chinese. The bulk of the population lives in and around the capital, situated on the Brunei River 9 miles from its mouth. The interior is largely forested and contains rich timber resources.

SARAWAK—Status: Colony.

Capital: Kuching (est. population 30,000).

Governor: Sir Charles Clarke.

Foreign trade (1939): exports, \$17,787,000; imports, \$13,541,000; chief export, petroleum.

Agricultural products: rice, sago, pepper, rubber (1938: 20,147 tons).

Minerals: petroleum (1939, including Brunei: 7,104,000 bbl.), gold, silver, coal.

Sarawak extends along the northwestern coast of Borneo for about 500 miles. In 1841 part of the present territory was granted by the sultan of Brunei to Sir James Brooke. The state, enlarged by additional concessions made between 1861 and 1905, continued to be ruled by members of the Brooke family until the Japanese occupation in December 1941. A British protectorate since 1888, Sarawak became a Crown colony July 15, 1946, through agreement between the British government and the then ruling rajah, Sir Charles Vyner Brooke.

The colony is mountainous and very well watered; inland communication is largely by water. Most of the inhabitants are Malays and Dyaks, but there are estimated to be about 100,000 Chinese in the colony. The principal mineral is petroleum which was discovered at Miri in 1909 and subsequently worked by Sarawak Oilfields, Ltd. There are also important forest resources. Under the enlightened rule of the Brookes, Sarawak had been developed into a highly organized community prior to the Japanese invasion.

Burma (British colony)

Area: 261,610 square miles.

Population (est. 1941): 16,823,798.

Density per square mile: 64.3.

Governor: Maj. Gen. Hubert E. Rance.

Principal cities (est. 1942): Rangoon, 501,219 (capital, chief port), Mandalay, 150,000 (river port, upper Burma), Moulmein, 70,000 (seaport); (census 1931) Bassein, 45,662 (river port).

Monetary unit: Rupee.

Racial stock (est): Burmans, 60%; Shans, 7%; Chins, 2%; Kachins, 1%; Indians, 6%; Chinese, 1%; Indo-Burmans, .8%; Europeans (about 8,000) and Eurasians (about 17,000).

Languages: Burmese, English.

Religions (1931): Buddhist, 84.1%; Animists, 5.2%; Mohammedan, 4%; Hindu, 4%; Christian, 2.2%.

Burma, for hundreds of years a battleground between petty princes, became a key battleground in World War II because the 800-mile Burma Road was the Allies' vital supply line to China. The Japanese invaded the country in January, 1942 and by May had occupied most of it, cutting the road. They put in a puppet government under Dr. Ba Maw. In one of the most difficult campaigns of the war, Allied forces had liberated most of Burma by the time

of the Japanese surrender on Aug. 14, 1945. Civil government was resumed in October, 1945, but the native nationalist feeling continued strong and British control was maintained with difficulty.

In the 18th century, Burmese attacks stoutly resisted the efforts of British, Dutch and Portuguese traders to establish posts on the Bay of Bengal. The British, operating from India, were persistent and by 1886 were able through military force to annex Burma to India. On April 1, 1937, the British separated Burma from India and set it up as a crown colony with its own legislature and a British governor.

Executive authority rests with the crown-appointed governor, advised by a council of ministers responsible to the legislature. The legislature has a senate of thirty-six members, half named by the governor and half by the house of representatives, which is composed of 132 elected members.

Under present plans, a new constitution is to be drafted after the 1947 elections, with the objective, as stated by Britain, of "complete self-government within the commonwealth and a status equal to that of the dominions."

Burma had 8,270 regular schools in 1940 with 639,259 attendance, and 18,346 monastic schools had attendance of 212,636. Because of the many Buddhist village schools, the percentage of wholly illiterate men is small. There is a university at Rangoon with 2,365 students.

The natives belong to many races and speak many languages, but in general they are all Mongolian. The Burmese are the most advanced and live in the fertile lowlands. Most other races are restricted to the hills. British Indians, settled in the delta region, supply most of the coolie labor, while the Chinese constitute the artisan and merchant class. Buddhism, the national religion, profoundly affects the national character; every village has its pagoda and a monk.

Burma is essentially agricultural, with crop growing concentrated in the delta and river valleys. It is a leading producer of rice, the staple food, which occupies two-thirds of the cultivated area. Production in 1939 was 7,418,210 tons. Crops grown in the dry zone in upper Burma include millet, cotton, groundnuts and sesame. Other crops include tobacco, fruit, vegetables and cereals. About 1½ million acres are under irrigation. There are a few rubber plantations in Tenasserim. The principal domestic animal is water buffalo used as a beast of burden in the delta, and small humped oxen which predominate in other areas. Cattle, including oxen, totaled 5,162,517 in 1938.

In 1938 there were 1,019 factories with 86,303 workers. Leading industries include

silk weaving and dyeing, rice husking, oil refining and wood carving.

Exports in 1939 totaled \$161,470,000 and imports \$74,758,000. Rice accounted for 42.6 percent of the exports (3,282,000 tons); other exports included lead, tin, petroleum, other minerals, and teak. Imports included coal, iron and steel. Over one-third of the export trade and half of the import trade is with India.

The principal commercial arteries are the Irrawaddy, navigable for 900 miles to Bhamo, and its tributaries. Regular steamer service is maintained to Bhamo. Railways designed to supplement river transport totaled 2,226 miles in 1940, all state-owned. There are no rail connections with India or any other country. The length of improved roads was 3,760 miles in 1940. In addition, the Burma Road connects Lashio, a rail terminus in northern Burma, with Kunming, China.

Revenues in 1939 totaled \$54,644,118; expenditures, \$51,183,102; total national debt, \$80,312,543.

Just smaller than Texas, Burma divides into three natural regions: the Arakan Yoma, a long, narrow mountain range forming the barrier between Burma and India; the Shan Plateau in the east and extending southward into Tenasserim; and the Central Basins running down to the flat, fertile delta of the Irrawaddy in the south. This delta contains a network of intercommunicating canals and nine principal mouths. The principal rivers are the Irrawaddy, Sittang, and Chindwin draining the Central Basin, and the Salween draining the Shan Plateau.

Mineral resources are considerable but, in many cases, undeveloped. Production by the Burma Oil Company, Ltd., in 1939, was 7,396,000 barrels. The output of the Burma Corporation in the northern Shan states in 1939 was 85,120 tons of lead, 6,175,000 ounces of silver. Other minerals include tin, zinc, nickel, cobalt, copper, gold, iron ore, molybdenum, coal, rubies, sapphires and jade.

More than half of Burma is forested, with government reserves totaling 31,637 square miles. In 1940, teak valuable for naval construction totaled 308,000 tons. Its cutting is strictly controlled. Other forest products include pyngado, bamboo, and cutch—a yellow dye. Fisheries are exploited both on the coast and inland.

CEYLON—Status: Self-governing colony.

Capital: Colombo (census 1931: 284,155).

Governor: Sir H. Monck-Mason Moore.

Foreign trade (1943): exports, \$161,700,000; imports, \$127,200,000; chief exports, tea, rubber.

Agricultural products: tea (exports 1943: 131,450 tons), rubber (137,500 tons), rice, copra.

The island of Ceylon lies in the Indian Ocean, separated from India on the north-west by the Gulf of Manaar and Polk Strait. It was settled in 1505 by the Portuguese who were ousted in the middle of the 17th century by the Dutch. An English force took over the island in 1796 and it became a crown colony in 1798. Under a constitution promulgated in February 1947, Ceylon is a self-governing colony with a bi-cameral legislature, a prime minister and a cabinet appointed by the Governor General but responsible to the Legislature except with regard to seven reserved subjects including defense and foreign affairs. The Royal Navy has an extensive base at Trincomalee and during World War II the headquarters of the Southeast Asia Command were at Kandy.

Its heterogeneous population (1943) included 4,113,000 Sinhalese, 1,527,000 Tamils, 39,000 Moors, 40,000 Burghers (descendants of early Dutch settlers) and Eurasians, and 11,000 Europeans. About two-thirds of the population speak Singhalese, an Aryan language closely related to Pali. The principal religions are Buddhism (about 60 percent), Hinduism (about 20 percent) and Christianity (about 10 percent).

Ceylon's prosperity depends upon agriculture, tea and rubber, the main products, are grown largely on plantations. Railways in 1943 totaled 912 miles and highways, 6,551. The monetary unit is the rupee. In 1942, there were 5,799 schools with 785,936. Literacy is estimated at 60 percent. The Maldiv Islands, 400 miles to the southwest, are a dependency.

In World War II, it became necessary for Ceylon not only to grow many of the foodstuffs hitherto imported but vastly to increase its exports. A steel-rolling plant was established in 1941, as well as other factories for new products.

CYPRUS—Status: Colony.

Capital: Nicosia (population 1943: 29,875).

Governor: Lord Winster.

Foreign trade (1943): exports, \$8,370,300; re-ports, \$447,330; imports, \$10,526,000; chief port, copper concentrates.

Agricultural products: barley, wheat, potatoes, wine, fruit (including carobs).

Minerals: copper ore (concentrates) (1938: 1,542 tons); pyrite ore (1938: 568,018 tons).

Cyprus, the third largest island in the Mediterranean, is located at roughly equal distance from the coasts of Asia Minor to the north and of Syria to the east. The site of early Phoenician and Greek colonies, passed in 1571 from the rule of Venice to that of the Ottoman Empire under which it remained until 1878 when it was ceded

Great Britain for administrative purposes. On the outbreak of hostilities with Turkey (November 5, 1941) the island was formally annexed to Great Britain. The governor is assisted by a nominated Execu-

tive Council, but he alone possesses the lawmaking power.

The people are mainly Greeks and Turks, although there is an Armenian colony and a distinct, though not numerous, Latin colony. More than 80 percent of the population is Christian. Agriculture is the principal industry. Sponge fishing is also important as well as copper mining. In 1943 there were 886 miles of main road, 1,716 miles of secondary road, and 71 miles of railroad. There are no natural harbors.

HONG KONG—Status: Colony.

Capital: Victoria (population 1931: 447,829).

Governor: Sir M. A. Young.

Foreign trade (1939): exports, \$146,436,000; imports, \$163,131,000; chief export (and import), food and provisions.

Agricultural products: rice, sugar cane.

Sea products (1939): 26,000 tons.

Major industries: shipbuilding, rope making, cement, sugar refining, textiles.

The colony of Hong Kong comprises the island of Hong Kong, at the mouth of the Canton River about 90 miles southeast of Canton, Stonecutter's Island, and the Kowloon peninsula, on the adjoining mainland, in addition to the New Territories (356 square miles) which are mainly agricultural lands. The latter were leased from China for 99 years in 1898, while Hong Kong itself was ceded to Britain by China in 1841. Hong Kong was attacked by Japanese troops December 7, 1941, and remained under Japanese occupation from December 25, 1941, until September 1945. The governor is assisted by nominated executive and legislative councils composed of both official and unofficial members.

Possessing an excellent natural harbor, 17 miles in extent, the only safe deep sea anchorage between Shanghai and Indo-China, Hong Kong is the entrepôt for trade throughout southern China and the western Pacific, re-exports normally constituting about two-thirds of the imports and nine-tenths of the exports. The total tonnage of ships entered and cleared from the colony (1938) was 34,130,246. There are only a few important duties and for practical purposes Hong Kong may be considered a free port. The colony is also an important British military and naval base.

The towns of Victoria and Kowloon contain the greater part of the population which is overwhelmingly Chinese. Besides those Chinese engaged in agriculture or industry, a large population lives in sampans or junks either in Victoria Harbor or neighboring bays. Agriculture and fisheries support a large part of the population. About 20 percent of the total area is under cultivation, most of it in the New Territories. Manufacture of consumers goods, both for local consumption and for export, is also important. In 1938 the colony had 22 miles of railroad and 371 miles of highway.

India (Empire)

Area: 1,581,410 square miles.

Population (census 1941): 388,997,955.

Density per square mile: 246.0.

Sovereign: H. M. King George VI, Emperor of India.

Secretary of State for India: Lord Pethick-Lawrence.

Viceroy and Governor General: Field Marshal Viscount Wavell.

Principal cities (census 1941): Calcutta, 2,108,891 (chief port); Bombay, 1,489,883 (seaport; cotton and textiles); Madras, 777,481 (seaport); Hyderabad, 739,159 (railroad, trading center); Lahore, 671,659 (railroad, manufacturing); Ahmedabad, 591,267 (manufacturing); Delhi, 521,849 (capital, British India); Cawnpore, 487,324 (textiles, leather), Amritsar, 391,010 (Sikh holy city); Lucknow, 387,177 (railroad, trading center).

Monetary unit: Rupee.

Racial stock: See Communities.

Communities (1941): Hindu, 65.5%; Moslem, 24.3%; Christian, 1.6%; Sikh, 1.5%; Buddhist, .06%; Parsi, .03%; Others, 7%.

Principal languages (1931): Hindustani tongues, about 33%; Bengali, about 15%; Telugu, about 7%; Punjabi and Lahuda, about 7%; Marathi and Konkani, about 6%; Tamil, about 5.5%.

HISTORY. India, half the size of the United States but with two and a half times the U. S. population, was a strife-ridden land in 1946. The British were offering India political independence, but the dominant Hindus and the strong minority of Moslems were unable to agree among themselves on a formula. Often their disagreement took the form of bloody riots in which many were killed and injured.

The Aryans or Hindus who invaded India between 2400 and 1500 B. C. from the northwest found a land already well civilized. Buddhism, founded in the 6th century B. C., had spread through northern India. The first exact date in Indian history is 326 B. C., the year that Alexander the Great invaded India. Meanwhile India continued to be divided into scores of rival states.

In 1526 Mohammedan invaders founded the great Mogul empire, centered on Delhi, which lasted at least in name until 1857. Akbar the Great (1542-1605) strengthened this empire and became the ruler of a greater portion of India than had ever before acknowledged the suzerainty of one man. The long reign of his great-grandson, Aurangzeb (1658-1709) represents both the culmination of Mogul power and the beginning of its decay.

Vasco da Gama, the Portuguese explorer, visited India first in 1498, and for the next hundred years the Portuguese had a virtual monopoly on trade with India. Meanwhile, the English founded the East India Company which set up its first factory at

Surat in 1612 and began expanding its influence, fighting against the Indian rulers and the French, Dutch and Portuguese traders simultaneously.

Bombay, taken from the Portuguese, became the seat of English rule in 1687. The defeat of French and Mohammedan armies by Lord Clive in the decade ending in 1760 laid the foundation of the British Empire in India. From then, until the administration of India was formally transferred to the British Crown in 1877, the East India Company was constantly occupied with the suppression of native nationalists and the extension of British rule.

After World War I, in which even the Mohammedan states of India sent soldiers to fight with the allies, Indian nationalist unrest rose to new heights under the leadership of a little Hindu lawyer, Mohandas K. Gandhi, called Mahatma Gandhi. His tactics, of a politico-religious nature, usually called for non-violent revolts against British authority.

In 1919 the British gave added responsibility to Indian officials and provided for a greater proportion of elected members in the provincial councils. In 1935 the British gave India a federal form of government and a measure of self-rule.

In 1942 British proposals to give India a dominion status after World War II were rejected both by the all-India Congress Party of Gandhi, and by the Moslem League. In August of that year, after the Congress Party had approved a new civil disobedience program, Gandhi and 200 other Indian leaders were arrested and held as political prisoners. Meanwhile, the Moslem League, led by Mohammed Ali Jinnah, demanded a separate Moslem state made up of those provinces predominantly Moslem. Further demands of the Moslem League in June of 1945 caused the breakdown of negotiations at Simla held to arrange a great degree of Indian self-rule.

In June of 1946, although the Moslem League disapproved of the move, the British installed an interim coalition executive council. It took office on Sept. 2 and was to serve until the adoption of a new constitution for India.

NATIONAL GOVERNMENT. India is governed under a 1935 act of the British Parliament which envisioned eventual self-government within the framework of a federation composed of the provinces of British India, and of those Indian states which accepted it. The Viceroy and Governor General named by the Crown is under the Secretary of State for India in the British Cabinet.

The British Indian legislature has two chambers—the sixty-member Council of State—thirty-four elected and twenty-six appointed; and the 142-member Assembly

—forty appointed and 102 elected. Its acts are subject to veto by the Governor General who has considerable law making power of his own.

The Executive Council (Cabinet), which took office on Sept. 2, 1946, was to serve until a constituent assembly determined permanent status and form of government for India. The Moslem League boycotted both the Executive Council and the Constituent Assembly; hence the five Moslem seats in the Council went to Moslems not members of the league.

PROVINCIAL GOVERNMENT. A governor named by the Crown administers each of the eleven provinces of British India, but these have autonomy to the extent of their own elected legislatures which advise the governors.

INDIAN STATES. There are about 564 semi-independent Indian states ranging from Hyderabad with over 16,000,000 population down to tiny ones with only a few hundred inhabitants. The Governor General is represented in each one by a representative or a resident agent, and normally his control is limited to broader matters affecting India as a whole. The powers of the native princes vary widely. Most of the larger states are administered by executive councils appointed by and responsible to the rulers.

Political Subdivisions

Political subdivision	Area (sq. mi.)	Population (census 1941)
Provinces	865,446	295,808,722
Ajmer-Merwara	2,400	583,693
Andamans and Nicobars	3,143	33,768
Assam	54,951	10,204,733
Baluchistan	54,456	501,631
Bengal	77,442	60,306,525
Bihar	69,745	36,340,151
Bombay	76,443	20,849,840
Central Provinces and Berar	98,575	16,813,584
Coorg	1,593	168,726
Delhi	574	917,939
Madras	126,166	49,341,810
North-West Frontier Province	14,263	3,038,067
Orissa	32,198	8,728,544
Panth Piploda	25	5,267
Punjab	99,089	28,418,819
Sind	48,136	4,535,008
United Provinces	106,247	55,020,617
States and Agencies	715,964	93,189,233
Assam	12,408	725,655
Baluchistan	79,546	356,204
Baroda	8,236	2,855,010
Bengal	9,408	2,144,829
Central India	52,047	7,506,427
Chhattisgarh	37,687	4,050,000
Cochin	1,493	1,422,875
Deccan (and Kolhapur)	10,870	2,785,428

Political subdivision	Area (sq. mi.)	Population (census 1941)
Gujarat	7,352	1,458,702
Gwalior	26,008	4,006,159
Hyderabad	82,313	16,338,534
Kashmir (including Feudatories)	82,258	4,021,616
Madras	1,602	498,754
Mysore	29,458	7,329,140
North-West Frontier	24,986	2,377,599
Orissa	18,151	3,023,731
Punjab	38,146	5,503,554
Punjab Hill	11,375	1,090,644
Rajputana	132,559	13,670,208
Sikkim	2,745	121,520
Travancore	7,662	6,070,018
United Provinces	1,760	928,470
Western India	37,894	4,904,156
Total	1,581,410	388,997,955

JUDICIARY. The federal court is the highest tribunal for constitutional matters, and from that there is appeal to the judicial committee of the Privy Council in London. Most of the provinces have their own high courts, magistrate courts and civil courts. Most of the civil judges and magistrates are Indian.

DEFENSE. The Indian Army in 1940 had 248,953 regulars and 42,773 reserves. By the end of World War II the strength rose to 2,115,737. Of these, 1,759,000 were to be demobilized by April 1, 1947. Indian units, usually segregated by race and creed, served with distinction in Italy and Burma in World War II. The country maintains both Royal Air Force and Royal Indian Air Force outfits. Units of the Royal Indian Navy served throughout the world in World War II under Allied command.

EDUCATION. In 1942 British India had 157,827 recognized primary schools for males with 10,498,787 students, and 24,141 for females with 1,519,939 students. There were 13,367 secondary schools for males with 2,434,767 students, and 1,830 for females with 350,022 students. There also were 18,139 unrecognized schools, those not conforming to government standards, with 552,000 students; and several thousand special schools. British India has fifteen universities with 1941 enrollment of 109,098 men and 5,006 women.

POPULATION. India's population increased 11 percent in 1921-31, and 15 percent in 1931-41. The 1939 birth rate in British India was 34; the death rate, 22. About 222 different languages are spoken but the twenty-five vernaculars of the Hindus are used by about two-thirds of the people. Hindus predominate in all British Indian provinces except Bengal, Punjab, Sind, Northwest Frontier Province, and the chief commissionership of Baluchistan. Christians are most numerous in Punjab; Buddhists, in Bengal.

AGRICULTURE. Even in good crop years, India is not quite self-sufficient in agri-

culture. In 1942, about 260,000,000 acres were cultivated, about 20 percent by irrigation. A third of the cropland is devoted to rice of which India grows a quarter of the world total. Cotton, grown especially in Bombay and the Central Provinces, is the big money crop. In this India ranks second to the United States, grows about 15 percent of the world total, and exported 546,000 tons in 1938. In Bengal is grown a large share of the world's jute; 1938 exports were 837,000 tons. Wheat, tea and sugar cane are major crops also. A universal crop in India is the mixture of groundnuts, sesame, rape, mustard and linseed, which yields seeds for vegetable oil.

MAJOR AGRICULTURAL CROPS, 1941

Crop	Acres	Tons
Barley	6,255,000	2,534,560
Corn	6,253,000	2,459,920
Cotton	23,286,000	1,180,600
Groundnuts	8,770,000	4,146,240
Jute	5,669,000	1,317,200
Rice	73,063,000	24,853,920
Rubber	138,200	17,765
Sugar cane	4,598,000	6,503,840
Tea	832,800	231,941
Wheat	34,862,000	11,205,600

Cattle are used for plowing and hauling all over India, except in the delta tracts where water buffalo do the work, and in the Indus Valley where the camel predominates. The 1940 livestock census (excluding the United Provinces and Orissa) showed 130,757,765 cattle and oxen, 35,760,493 water buffalo, 961,563 camels, 49,717,044 goats, 1,710,965 horses, 1,734,679 mules and asses, and 45,107,062 sheep.

MANUFACTURING. India, whose factories doubled in number from 1922-42, is among the eight leading industrial countries of the world. Cotton textiles is the biggest industry—401 mills in 1943 made 766,868 short tons of yarn and 4,109,336,790 yards of cloth. In 1940, a total of 303,777 persons worked in 108 jute mills. In 1939 the total of all factories was 7,694 with 1,687,473 workers. Plants making or processing food, chemicals, tea, iron and steel are of especial importance. The Tata Iron and Steel Works in Bihar is the largest such plant in the British Empire, with annual capacity of over 1,000,000 tons of pig iron.

TRADE. Exports in 1944-45 were \$635,699,000; imports, \$605,353,000. Lend-lease receipts from the United States from 1941-45 totaled \$2,123,609,000. In 1943-44, the biggest suppliers were Britain, Iran, United States and Egypt, in that order, with machinery, cotton manufactures, oil, flour and grain, and metals and ore the chief imports. The biggest customers were Britain, the United States, Ceylon and Australia, in that order, with jute products, raw cotton, cheese, seeds and raw jute the chief exports.

COMMUNICATIONS. In 1939-40, total tonnage of vessels in foreign trade handled at ports in British India was 20,936,550, of which about 65 percent was British. Tonnage handled in the inter-port trade totaled 27,282,326. Rail mileage in 1943 was 40,925, mostly Imperial State Lines. Passengers carried in 1942-43 totaled 622,333,110; freight, 95,253,000 tons. Highway mileage in 1939 totaled 280,746, of which 207,514 was improved. Licensed cars and taxis in British India in 1940 numbered 94,788. In all of India in 1941, there were 121,534 radios and 86,219 telephones.

FINANCE. Estimated revenue for the central government for 1945-46 was \$1,071,980,000; expenditures, \$1,563,640,000. The public debt in March of 1945 was \$5,675,800,000.

NATURAL FEATURES AND RESOURCES. India, which has extreme dimensions both north-south and east-west of about 1,900 miles, is roughly a great triangle. The apex points south. The base, in the north, is the Himalayas, south of which lie extensive plains drained by the Ganges, Sutlej-Indus and Brahmaputra river systems. The largest is the Indo-Gangetic plain extending from the Bay of Bengal on the east to the Afghan frontier and the Arabian Sea on the west. It is the richest and most densely settled part of India, containing more than half of the population.

Another distinct natural region is the Deccan, a plateau of 2,000 to 3,000 feet of elevation occupying the southern or peninsular portion of India. In several regions, the Deccan is quite mountainous. Administratively a part of India are several groups of islands—the Laccadives (fourteen islands totaling 80 square miles) in the Arabian Sea; and the Andamans (204 islands totaling 2,508 square miles) and the Nicobars (nineteen islands totaling 635 square miles) in the Bay of Bengal.

India's three great river systems, all rising in the Himalayas, have extensive deltas. The Ganges flows south and then east for 1,500 miles across the northern plain to the Bay of Bengal; its delta begins 220 miles from the sea. The Indus, starting in Tibet, flows northwest for several hundred miles before turning southwest toward the Arabian Sea; it is important for irrigating arid areas in western India. The Brahmaputra, also rising in Tibet, flows eastward first and then south into India and the Bay of Bengal.

India's climate varies from temperate in the north to tropical in the south, where temperatures are almost constant the year around. During the November-February cold season, northern India has a climate like that of the Riviera. From March to June steadily rising temperatures reach a peak sometimes as high as 115 degrees, and then comes the southwest monsoon. Rainfall is heavy in most of India, averaging

fifty to sixty inches in Assam and Bengal, and reaching 500 inches in the Garo hills of Assam. Northwest India receives the least rainfall.

India's most valuable mineral is coal, found throughout most of the country. In 1938, the average number of persons employed daily in coal mining was 226,887. Manganese ore is mined in the Central Provinces; gold in the State of Mayurbhanj and Orissa. Assam and the Punjab produce oil. Other mineral products include ilmenite, saltpeter, chromite, monazite, diamonds, magnesite, zircon, silver, graphite, tungsten ore and sapphires.

MAJOR MINERALS, 1938

Minerals	Amount	U. S. dollars
Coal	31,935,836 tons	38,942,610
Manganese ore	1,084,072 "	14,378,760
Gold	321,138 oz.	11,151,557
Petroleum	2,488,000 bbl.	6,053,467
Salt (including rock)	1,724,410 tons
Iron Ore	3,072,894 "
Mica	9,806 "	4,144,177
Copper	5,970	1,610,992

In 1942, forests in British India covered 97,403 square miles, about 11 percent of the total area. Three-fourths of this area was in preserves controlled by the provincial governments. Average annual production of timber and firewood is over 300,000,000 cubic feet. Among the major forest products are timber of teak, conifers and sandalwood, and bamboo, fibers, gums and resins. India exploits its fisheries extensively, both in the rivers and off the coasts.

MALAYAN UNION and SINGAPORE—Status: protectorate and Crown colony.

Capital: Singapore (population 1937: 520,164).

Governor General: Malcolm Macdonald.

Governor of Malayan Union: Sir E. Gent.

Governor of Singapore: F. C. Gimson.

Foreign trade (1938): exports, \$324,037,000; imports, \$311,114,000; chief export, rubber (47.9 percent).

Agricultural products: rubber (1938: 404,206 tons), rice, coconuts.

Minerals: tin ore (metal content), (1939: 3,265 tons), iron ore (1938: 1,770,625 tons), gold (1938: 40,794 oz.), tungsten (1938: 2,204,000 lbs.), bauxite, manganese ore.

Forest products: timber, jelutong, gutta percha, arecanuts.

British Malaya consists of nine semi-independent states occupying most of the Malay Peninsula and of the island of Singapore off its southern tip together with several smaller islands. The native states were brought under British administration by a process of commercial contact and political expansion in the late 19th and early 20th centuries and by the

Anglo-Siamese Treaty of 1909. Singapore, founded in 1819 by Sir Stamford Raffles, had been developed into the principal British naval base in the Far East prior to World War II. Japanese troops invaded the Malayan States in December 1941, and captured Singapore February 16, 1942.

By Orders in Council effective April 1, 1946, the Malayan Union was formed from the former "Federated Malay States"—Perak, Pahang, Selangor, Negri Sembilan—the former "Unfederated Malay States"—Johore, Trengganu, Kelantan, Kedah and Perak—and all parts of the former "Straits Settlements" except Singapore—thus including the settlement of Penang (George-town, the island of Penang and Province Wellesley) and the settlement of Malacca. The Crown colony of Singapore, comprised of the island of Singapore and its dependencies—the Cocos or Kneeling Islands, and Christmas Island—remains outside the Malayan Union. Each political entity—the Malayan Union and Singapore—has a governor responsible to the governor general of the Malayan Union and Singapore. Actual administration in each Malay state is carried on by a British resident, although nominal powers are vested in the native sultan in each state.

Palestine (British Mandate)

Area: 10,159 square miles.

Population (est. 1945): 1,750,000.

Density per square mile: 171.2.

British High Commissioner: Lt. Gen. Sir Alan Gordon Cunningham.

Principal cities (est. 1944): Jerusalem, 155,314 (capital, religious center); Tel Aviv, 155,277 (Jewish communal center); Haifa, 125,498 (chief port); Jaffa, 93,443 (seaport).

Monetary unit: Palestinian pound (£P).

Languages: English, Hebrew, Arabic.

Religions (est. 1944): Mohammedan, 60%; Jewish, 30%; Christian, 7.5%; Others, 2.5%.

The history of Palestine is for the most part a chronicle of invasion, conquest and confusing divisions. To the ancient Hebrews it was known as the "Land of Canaan"; the name Palestine is derived from that part of the country inhabited by the Philistines in olden times. About 1000 B. C. the Hebrews succeeded in establishing a single monarchy which later split up into two kingdoms—Judah and Israel. The country was subsequently invaded and overcome by many nations, including the Assyrians, Babylonians, Egyptians, Persians, Macedonians, Romans and Byzantines. In the 7th century (634-36) A. D., Palestine was wrested from the Byzantine Empire by the Arabs. Frankish Crusaders captured Jerusalem in 1099 and set up a feudal kingdom which endured until the defeat of the Franks by Saladin (1187) and the restoration of Moslem rule.

In 1516 suzerainty over the area was transferred from the Mamelukes of Egypt to the Turks. It remained part of the Ottoman Empire until World War I, when British forces under General Allenby defeated the Turks. The League of Nations mandate awarded to Britain was put in force Sept. 29, 1923.

Meanwhile, a movement had been founded in 1897 by Theodor Herzl to create a Jewish homeland in Palestine, and a considerable number of Jewish immigrants had entered the country prior to World War I. On Nov. 2, 1917 official British recognition was given both to the growing Arab nationalist movement and to the Zionist aspirations by the issuance of the so-called Balfour Declaration which read:

"His Majesty's Government view with favour the establishment in Palestine of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of that object, it being understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by the Jews in any other country."

The declaration was attacked by both Arabs and Zionists. Throughout the period between the two World Wars, outbreaks of violence and open revolt occurred. Jewish immigration continued apace, especially after the rise of Hitler. A British royal commission report approved by the British Government July 7, 1937 reached the conclusion that the Arab and Jewish positions were irreconcilable and recommended the partition of Palestine into an Arab and a Jewish state separated by a mandated area in the vicinity of Jerusalem. The Zionists seemingly acquiesced, but the Arabs opposed the proposal and resumed armed opposition to the Jews. At a Zionist-Arab meeting held in London in 1939, the Arabs continued their opposition to Palestine's partition, proposing instead the establishment of an independent Palestine with full minority rights for the Jews. In May, the British Government issued a White Paper declaring the establishment of a Jewish state contrary to British obligations to the Arabs and promising, after a transitory period of ten years, the establishment of an independent Palestine in which Arabs and Jews would share authority in government. During the next five years, 75,000 Jews were to be allowed to enter Palestine. These proposals did not satisfy either party but the outbreak of World War II overshadowed all local issues.

Arab-Jewish cooperation in the war effort began a period of order, but the end of European hostilities brought a renewal of friction, and the formation of the Arab

League in 1945 served to crystallize lines of opposition. By 1946, there were many individual acts of terrorism by the Irgun Zvai Leumi, an illegal army, and the Stern group, two minor Jewish factions for whom the Jewish Agency denied responsibility. Both embarked on a campaign of open violence in protest against Britain's refusal to admit 100,000 Jewish refugees to Palestine. On July 25, 1946, a proposal was made in London for a federalized Palestine partitioned into Arab, Jewish and British districts and subject to a British-controlled central government. The plan had British support, but was disclaimed by the U. S. State Department and proved unacceptable to Arabs and Jews alike.

Palestine is administered by Great Britain under a mandate awarded by the League of Nations. The civil administration is headed by the British High Commissioner who is also commander in chief and may exercise extraordinary powers in the event of emergency. The country is divided into six districts headed by district commissioners. The Jewish community enjoys a great amount of autonomy for its internal affairs through an Elected Assembly and a General Council (*Va'ad Leumi*) which administers the affairs of the community and represents it in its relations with the Government. The Rabbinical Council has jurisdiction in matters of Jewish personal status, while the Jewish Agency for Palestine is the recognized agency in all matters pertaining to the upbuilding of the Jewish National Home. It also supervises Jewish immigration. The Moslem Supreme Council controls Moslem religious affairs.

Civil courts exercise jurisdiction in all cases except matters of personal status in which religious courts have jurisdiction, and in cases involving violations of martial law or security regulations in which military courts may exercise jurisdiction. The Supreme Court of Palestine is composed of the Chief Justice and three other British judges and four Palestinian judges.

Palestine is garrisoned by a varying number of British Imperial divisions and by units of the Royal Air Force. There is also a police force of about 6,000, about half of whom are British Christians and a quarter, Moslems. The remainder are Palestine Christians and Jews.

Education in Palestine is neither compulsory nor universal. The public system consists of Government Arab schools and of Jewish schools administered by the Jewish General Council but subject to Government inspection. In 1941-42, the Arab system had 404 schools (12 with secondary sections) with 56,558 scholars; the Jewish public schools numbered 442 (including 5 training colleges and 26 secondary, 6 trade and vocational schools) with 62,655 scholars. There were 177 private

Moslem schools with 14,751 scholars, 309 private Jewish schools with 23,971 scholars and 189 Christian schools with 25,619 scholars. The Jewish University at Jerusalem had 657 students.

From 1922 until 1943 the estimated increase in the population was 924,523; the estimated increase among Jews was 419,122, Moslems 439,538 and Christians 59,317. Four-fifths of the increase in the Jewish population was attributable to immigration while the increase in the Moslem population was attributable to the high birth rate. A large proportion of the Palestine Christians are Arabs.

Palestine is the Holy Land for Jew and Christian alike and, to some extent, for the Moslems whose Mosque of Omar stands in Jerusalem. In addition to Jerusalem, historic towns include: Bethlehem, the birthplace of Jesus; Nazareth, in Galilee, His boyhood home; Jericho, famous in both the Old and New Testaments; Hebron, one of the oldest inhabited cities in the world; the ancient town of Beersheba; and Acre, lying at the foot of Mt. Carmel, and Ascalon, on the coast, famous for their part in the Crusades.

Agriculture remains Palestine's chief industry. The maritime plain, the Emek Valley and the northern Jordan Valley are the principal agricultural areas. In 1943 about 110,000 acres were in Jewish possession, of which 44 percent had been purchased by the Jewish National Fund for perpetual lease to Jewish settlers. Most of the Jewish settlements are located in the maritime plain, the plain of Esdraelon and upper and lower Galilee. Citrus cultivation, confined largely to the maritime plain, furnishes the major export crop normally, but the industry was disorganized by World War II with exports dropping from about 15,000,000 cases before 1939 to about 2,425,000 in 1943-44. Olives, cultivated mostly in the hill areas, form the next most important crop with an average annual production of 7,000 tons of oil. Other important crops include rice, fresh fruits and vegetables, figs, tobacco, wheat, barley, maize, sesame and potatoes. Wine production (1943) was 1,135,200 gallons. The dairy industry has made rapid progress in recent years, especially on Jewish farms. Livestock (1943) included 242,945 cattle, 244,162 sheep, 325,376 goats and 29,736 camels.

Palestinian industry has developed substantially during the past 15 years. In addition to the manufacture of consumer goods for home consumption; articles prepared for export include Dead Sea chemicals, artificial teeth and soap. During World War II, Palestine became one of the world's leading diamond cutting centers. Refineries and storage tanks of the Iraq Petroleum Co. are located at Haifa, a terminus of the pipeline from the Iraq oil fields.

The last industrial census (1936) showed 5,602 establishments with 28,670 workers and an output valued at \$42,383,534.

Exports (1945) were estimated at \$44,330,000 and imports at \$112,840,000. In 1941, 42.6 percent of the exports went to Egypt, 10.9 percent to Syria, 9.8 percent to the U. S., and 5.9 percent to Britain; 30.1 percent of the imports came from Britain, 13.1 percent from Egypt, 9.7 percent from the U. S., and 3.3 percent from Syria. Principal exports (excluding petroleum products, Dead Sea chemicals and certain other products) were: edible oils, 7 percent; rice, 4.7 percent; hides, 4.5 percent; and lemons and oranges, 2.4 percent. Major imports were: wheat, 7.8 percent (78,000 tons); cotton piece goods, 5 percent; sugar, 4.2 percent; and cattle, 2.8 percent. Citrus fruits in prewar years accounted for over 75 percent of all exports.

Palestine railways (1942) included 302 miles of broad gauge and 111 miles of narrow gauge (Hejaz railway). All-weather roads (1939) totaled 1,451 miles and seasonal roads 985 miles. In 1942, 1,061 vessels of 1,455,471 net tons entered Palestinian ports. In 1943, 5,659 private cars were licensed and in 1945 there were 22,833 telephone subscribers.

The monetary unit is the Palestinian pound (£P), at par with the pound sterling. Revenue (1943-44) was estimated at \$34,936,000 and expenditures at \$61,223,760. The public debt (1943) was \$14,508,000 and currency in circulation (1944), \$165,230,000. The two major banks are Barclays and the Anglo-Palestinian Bank, Ltd.

Palestine is a mountainous plateau, traversed from north to south by branches of the Lebanon Mountains. The plateau is broken by great depressions running from north to south. The maritime plain is remarkably fertile. The Jordan, the only important river, rises in Mt. Hermon (Syria) and flows south along the trans-Jordan border through Lake Merom and the Sea of Tiberias, or Galilee, into the Dead Sea. Five streams besides the Jordan empty into the Dead Sea, whose surface is 1,300 feet below the level of the Mediterranean.

Mineral resources are limited. The chief minerals of commercial importance are potash (1942: 32,032 tons), gypsum, sulphur, limestone and rock salt. The Dead Sea contains many valuable dissolved salts, and petroleum and bitumen exudations are found around its southern end.

There are few forested areas and wood is a major import (13,161,000 cu. ft. in 1941). The catch of fish (1943) was 3,149 tons, with 530 vessels and 2,250 licensed fishermen, mostly Arabs, engaged in the industry.

OCEANIA

Australia, Commonwealth of (Dominion)

Area: 2,974,581 square miles.

Population (est. 1945): 7,343,800.

Density per square mile: 2.4.

Governor General: H. R. H. the Duke of Gloucester.

Prime Minister: Joseph Benedict Chifley.

Principal cities (est. 1943): Sydney, 1,398,000 (seaport, wool market); Melbourne, 1,170,000 (seaport, wool, wheat); Brisbane, 370,500 (seaport, industrial center); Adelaide, 362,500 (seaport); Perth, 263,000 (western seaport); Canberra, 12,200 (capital).

Monetary unit: Australian pound (£A).

Racial stock: European except about 75,000 aboriginals and (1943) 49,849 other non-Europeans (25,143 Asiatic).

Language: English.

Religions (census 1933): Anglican, 38.6%; Roman Catholic, 17.5%; Presbyterian, 10.7%; Methodist, 10.3%; Other Christians, 9.1%.

HISTORY. Lying far from the early navigation routes developed by commerce between Europe and Asia, and separated from other lands except islands inhabited by savages, Australia was the last continent to be discovered. The first to land on the continent were the Dutch who sailed into the Gulf of Carpentaria in 1606. Later in the same year, Luis Vas de Torres, a Spanish captain, sailed through the strait that bears his name and probably touched at several points on the north coast. A Dutch captain, Dirk Hartog, explored the west coast in 1616. General Carpenter sailed around the Gulf of Carpentaria in 1628. In 1642 Abel Tasman sailed from west to east along the southern shore and proved that Australia was not a part of the Antarctic continent. The continent was named New Holland, and so it was called until about 1850.

In 1770 Captain James Cook, after sailing through Cook Strait in New Zealand, sailed to the east coast of New Holland and landed on the bay just south of the present city of Sydney. His account of the country led to its being claimed and settled by Great Britain.

The first settlement, made in 1788 at Botany Bay, was founded as a penal station for criminals from England. Transportation of criminals was virtually suspended in 1839, but Australia had comparatively few white settlers until gold was discovered in Victoria in 1851, after which immigrants poured in. By 1860 all the states (then separate colonies), except Western Australia, had been granted responsible government.

On January 1, 1901 the six Australian states united to form the Commonwealth

of Australia. The Commonwealth supported Great Britain wholeheartedly in World War I, sending 329,883 troops abroad, all volunteers, of whom 59,258 were killed. The financial drain on a nation of less than 6,000,000 was extremely heavy. The Labour party was defeated in the elections of 1919, 1922, and 1925. In February 1923, the wartime premier, W. M. Hughes was succeeded by Stanley M. Bruce, leader of the Liberal wing of the Nationalist party who formed an alliance with Dr. Page, leader of the Country party. Bruce was succeeded in 1929 by the Labour leader, J. H. Scullin, who was replaced in January 1932 by J. A. Lyons, leader of the United Australia party, an amalgamation of several non-Labour interests.

Australia declared war on Germany September 3, 1939 and in 1940-42 Australian troops distinguished themselves in the African, Balkan, Crete and Malayan Campaigns. Country party leader, Arthur William Fadden replaced Robert Gordon Menzies, leader of the United Australia party, as Prime Minister in August 1941 but was displaced by John Curtin with a Labour cabinet in October. With the Japanese invasion of Southeast Asia and New Guinea in late 1941 and early 1942, Australia was threatened with invasion for the first time in 150 years. Australia became a base for U. S. troops and Gen. Douglas MacArthur set up his headquarters there on March 17, 1942. In the general elections held August 21, 1943, Prime Minister Curtin's Labour Government was confirmed in office. Prime Minister Curtin died July 5, 1945 and was succeeded on July 13 by Joseph B. Chifley. H. R. H. the Duke of Gloucester, brother of King George VI, assumed office as governor general January 30, 1945.

GOVERNMENT. Australia, a self-governing member of the British Commonwealth of Nations, is a federal union of six states (New South Wales, Victoria, Queensland, South Australia, Western Australia and Tasmania) and two territories (Northern Territory and Capital Territory). The Constitution is modeled to some extent on that of the United States. Federal legislative power is vested in a Parliament with two houses—the Senate with 36 members (six for each state) and the House of Representatives with 74 members elected on a population basis. Executive power nominally is exercised by the King acting through the Governor General appointed by him but actually the Commonwealth is administered by the Prime Minister and the Executive Council (Cabinet) who are responsible to the House of Representatives and must enjoy its confidence. The House of Representatives continues for three years from the date of its first meeting unless sooner dissolved. Senators are chosen for six years but the Senate may be dissolved

in the event of prolonged disagreement with the House.

Each of the provinces is headed by a governor appointed by the Imperial Government who is advised by the Prime Minister and Executive Council (Cabinet) who actually administer the government. Every province has a bicameral parliament except Queensland (unicameral). The state governments retain the powers not specifically delegated to the federal government. The Northern Territory is administered under the supervision of the federal government.

Federal judicial power is vested in a Federal Supreme Court of six justices appointed by the Governor General in Council. Each state has its own judicial system.

SOCIAL AND ECONOMIC CONDITIONS. Normal primary education is provided free by the states. In 1939 there were 9,940 state schools, average attendance 744,095; 1,863 private schools, average attendance 219,171; 94 technical schools, total enrollment 101,155; 122 business colleges, total enrollment 24,337; 8 universities, total enrollment 14,236. The oldest and best endowed universities are those of Sydney, Melbourne and Adelaide.

Australia is the world's chief producer of wool and sheep farming is the Commonwealth's most important single industry. About 55 per cent of Australia's total area is suitable only for pastoral pursuits. In 1944 there were 123,174,000 sheep, 14,142,400 cattle, 1,746,721 pigs and 1,449,119 horses. The production of wool (1944) amounted to 582,000 tons; estimated butter production (1943-44) was 157,498 tons; cheese 35,853 tons, bacon and hams 45,600 tons. Less than 20 percent of the total area is suitable for agricultural purposes; the total area devoted to crops in 1943 was 17,419,717 acres. The most important crop is wheat; the areas of heaviest production are in South Australia and New South Wales but production in Western Australia is rapidly increasing. Root crops play a smaller part in arable farming than they do in northwest Europe. Sugar and cotton are grown in Queensland and New South Wales, tobacco in northeast Victoria while vines grow chiefly in South Australia and Victoria. The value of pastoral, dairying and agricultural production (1941-42) was \$686,243,000.

Australian industry has made rapid progress since 1915 with the value of industrial output tripling itself between 1915 and 1940. Manufacturing is concentrated in or near the large cities and is mainly concerned with primary production such as the processing of pastoral products, although heavy industrial products are being produced in increasing volume. New South Wales is the leading industrial state. Power for industry is derived almost entirely

from coal. In 1942-43 there were 26,414 industrial establishments employing 759,044 workers with an output valued at \$352,002,056.

Exports (1944-45) were valued at \$273,740,000 and imports, \$256,093,000. Of exports valued at \$478,744,000 in 1939, 50.5 percent went to Britain, 12.1 percent to the U. S., 6.9 percent to France, and 4.5 percent to New Zealand. Of imports valued at \$453,104,000, 39.6 percent came from Britain, 14.3 percent from the U. S., 7.6 percent from Canada, and 7.0 percent from the Netherlands Indies. Leading exports (1939) were wool 31.5 percent (432,000 tons), gold 11.0 percent, butter 9.5 percent (115,000 tons), meat 7.7 percent (254,000 tons), and wheat 6.4 percent (1,894,000 tons). Leading imports (1939) were motor cars and parts 6.7 percent, petroleum 5.5 percent, cotton and linen piece goods 4.8 percent, electrical machinery and appliances 3.6 percent, and paper 2.7 percent.

The principal ports are Sydney (1938-39: 11,600,000 tons entered); Melbourne (8,600,000 tons) and Adelaide (4,900,000 tons). Railway mileage (1943) totaled 27,225, all of which was owned by the state or federal governments. Roads (1941) totaled about 455,000 miles. Civil aviation is under Commonwealth control. In 1943 there were 24,395 route miles open and in 1942-43 7,517,000 miles were flown.

Revenue (actual 1944-45) \$1,098,950,000; (estimated 1945-46) \$1,088,909,000; expenditure (actual 1944-45), ordinary \$478,291,000, defense \$1,471,987,000; (estimated 1945-46), ordinary \$422,400,000, defense \$1,152,000,000. The public debt (June 30, 1944) was \$7,573,945,000.

NATURAL FEATURES. Australia is the smallest continent and the largest island in the world, approximating in size to the United States and being more than three-fourths of the size of Europe and over one-fifth of the area of the British Empire. Much of Australia is an arid plain with neither high mountains nor large forests. The coast line is unusually regular but two great peninsulas jut out toward New Guinea in the north—Cape York Peninsula and Arnhem Land. Between them lies the Gulf of Carpentaria. A wide bay, the Great Australian Bight, cuts into the south coast. Along the east coast ranges of mountains run from north to south, reaching their highest point at Mt. Kosciusko (7,328 ft.). West of the mountains, in the territory covered by New South Wales and southern Queensland, there are three plains, one drained by the Murray and Darling Rivers which flow into the sea southeast of Adelaide, one draining into Lake Eyre, a salt lake 39 feet below sea level, and the third—a tropical plain—surrounding the Gulf of Carpentaria. The western half of the continent is occupied by a desert plateau

which rises into barren, rolling hills near the west coast. It includes the Great Victorian Desert, to the southward, and the Great Sandy Desert to the northward. The island of Tasmania, lying off the south-eastern coast is largely a plateau, cut into plains and valleys by large rivers.

The northern one-third of the country lies within the torrid zone and the remainder, within the south temperate zone. The coolest portion of the mainland (Victoria) is not unlike Spain and south Italy. The average for Australia is a whole 70° and the northern coastal areas average 82°. Large areas of the continent receive less than 10 inches of rain. The eastern highlands and the state of Victoria are the best-watered regions.

Australia possesses considerable mineral resources. The value of mineral output (1942) was \$132,022,000. Most important is gold, with important mines located in every state except South Australia (1943 output: 751,279 fine ounces; 1944, 657,028 ounces). Production was curtailed to some extent during World War II. Second in importance is coal, mined in and near Sydney, near Brisbane and eastern Tasmania (1944 output: 15,075,000 tons). The Broken Hill mine in New South Wales is one of the most valuable silver-lead-zinc areas in the world. Silver-lead ore production (1942) was 289,-198 tons; zinc and concentrates, 315,875 tons; manganese ore, 10,107 tons. Other important minerals include tin (1944: 3,000 metric tons), copper (ore), (31,300 metric tons) and iron ore (1943: 2,250,000 metric tons).

Forest products (1938) were valued at \$31,149,509. Important products included timber (rough sawn) (656,859,000 board feet), eucalyptus oil, sandalwood oil, tan bark and yacca gum.

The fish catch (1938) amounted to 32,150 tons valued at \$5,196,967. Other sea products include bêche-de-mer, oysters, pearls, pearl shell and tortoise shell.

OCEANIA

FIJI—Status: Colony.

Capital: Suva (population 1936: 15,522).

Governor (and British High Commissioner for the Western Pacific): A. W. G. H. Grantham.

Foreign trade (1943): exports, \$7,182,000; imports, \$10,940,000; chief export, raw sugar (75 percent).

Agricultural products: sugar (exports 1943: 104,000 tons), copra, bananas, molasses.

Mineral: gold (1939: 110,000 oz.).

The colony consists of an archipelago of from 200 to 250 islands in the Pacific Ocean about 1800 miles northeast of Sydney, Australia. The larger islands, including Viti Levu (4,011 square miles) and Vanua Levu (2,137 square miles) are mountainous and of volcanic origin. The islands

were ceded to Great Britain by the native ruler in 1874. The governor is assisted by a nominated executive council and by a legislative council, partially nominated and partly elected.

The population (1942) included 109,920 Fijians and 105,581 British Indians. The importation of the latter to work the sugar plantations has led to important social, economic and population changes. There has been almost no intermarriage between Fijians and Indians. A large proportion of the cultivated land is devoted to the production of sugar cane.

Gilbert and Ellice Islands

The islands in these groups (including the Gilbert group; the Ellice group; Ocean Island [the seat of administration], Fanning, Washington and Christmas Islands; and the Phoenix group) were proclaimed a British protectorate in 1892 and annexed in 1915. The colony is administered by the High Commissioner for the Western Pacific through a Resident Commissioner. The most important product is phosphate, produced on Ocean Island (1938: 369,376 tons). Sovereignty over Canton and Enderbury Islands in the Phoenix group was held in abeyance by an Anglo-American agreement signed August 10, 1938. Several of the islands were occupied by Japanese forces during World War II.

Nauru. This small island (5,936 acres) was annexed by Germany in 1888 and placed under joint Australian, New Zealand, and British mandate after World War I. It lies about 2,215 miles northeast of Sydney and to the northeast of the Solomon Islands. Its principal economic activity is the production of phosphates for fertilizer (1940: 1,044,000 tons). Population (1941) was 2,672 including 68 Europeans and 584 Chinese.

NAURU: See also Australia.

NEW GUINEA: See also Australia.

NEW GUINEA, Mandated Territory of—Status: League of Nations mandate.

Area: 93,000 square miles.

Population (1943): 804,000.

Capital: Raboul.

Administrator: Brig. Sir Walter R. McNicoll.

Foreign trade (1940): exports, \$11,210,000; imports, \$3,870,000; chief export, gold.

Agricultural products (1940): coconuts (80,173 tons), cacao, rubber.

Minerals: gold (1940: 278,922 ounces), copper, iron.

The northern section of southeast New Guinea (69,700 square miles) was mandated in 1919 by the League of Nations to the government of the Commonwealth of Australia, together with the Bismarck archipelago (New Britain, New Ireland, and

adjacent islands), the Admiralty Islands and several outlying groups and the northern Solomon Islands (Bougainville and Buka). The administrator advises the governor general of Australia who can legislate by ordinance. Indirect rule by native chiefs has been continued. Japanese landings were effected on New Britain and New Ireland and the Solomons January 23, 1942 and on the northeast coast of New Guinea March 8. Allied forces checked their advance early in 1943; but many of the islands were by-passed in the Allied advance to the Philippines. By May 26, 1945 Australian forces were in control of the entire coast line of British New Guinea and Papua, having sealed the remaining Japanese in the interior. Formal Japanese surrender took place September 6, 1945.

MAJOR AGRICULTURAL CROPS, 1943

Crop	Acreage	Tons
Barley	451,000	196,320
Corn	285,000	195,160
Hay	2,359,000	3,489,920
Oats	1,497,000	335,744
Sugar cane	329,000	5,203,520
Wheat	9,280,000	4,671,840

NEW HEBRIDES: See also France.

Zealand Company was formed the same year and immediately began to send out its first colonists.

New Zealand was granted self-government in 1852, full parliamentary system and ministries in 1856, a constitution in 1870, and dominion status on Sept. 26, 1907. Meanwhile from 1861 to 1871 there was fierce intermittent fighting with the native Maoris. Gold was first discovered in 1853 and a permanent mining field established in 1861.

New Zealand sent troops to help the British in the South African War, 1899-1902, and in World War I. Subsequently New Zealand received from the League of Nations a mandate over Western Samoa and in 1946 when New Zealand offered the mandate to the proposed trusteeship system of the United Nations, the offer was the first act of its kind under the U.N. Charter.

New Zealand's Labor Party came to power in 1935 for the first time when it defeated a coalition government headed by George W. Forbes. Under Michael J. Savage as prime minister, the Labor Party began a program of liberal economic and social measures and it was again successful in the 1938 elections, with the Reform and Liberal Parties remaining as the official opposition.

When Savage died in 1940, he was succeeded by Peter Fraser who formed a special war cabinet in July of that year, New Zealand having joined Britain in the war against the Axis in September of 1939. In World War II New Zealand troops fought in Libya, Greece, Crete, North Africa, Sicily and Italy, and the islands served as a major base for U. S. troops in the Pacific war against the Japanese.

New Zealand is a self-governing dominion of the British Commonwealth of Nations. The British Crown is represented by a Governor-General named by the King after consultation with the New Zealand government. Parliament has two houses—the thirty-six-member Legislative Council named for seven years by the Governor-General with the advice of the Cabinet; and the eighty-member House of Representatives popularly elected for three years. The House elected on Sept. 25, 1943, had forty-five Labor Party members. Executive power is vested in the Cabinet chosen from the members of the majority party in the House and headed by the prime minister. Local government divisions include counties, boroughs, town districts, and many special authorities created for special purposes.

Military service was voluntary until July 22, 1940 when compulsory service was instituted. Service outside the Dominion, hitherto voluntary, also became obligatory during World War II. At full mobilization,

New Zealand (Dominion)

Area: 103,410 square miles.

Population (est. 1945): 1,655,794.

Density per square mile: 16.0.

Governor-General: Lt. Gen. Sir Bernard Freyberg, V.C.

Prime Minister: Peter Fraser.

Principal cities (census 1945): Auckland (greater), 256,426 (seaport and naval base); Wellington (greater), 175,189 (capital); Christchurch, 112,525 (cereals; stockraising); Dunedin, 65,487 (textiles, meat freezing).

Monetary unit: New Zealand pound.

Racial stock (census 1936): European, 94.3%; Maori and half-caste, 5.2%; Others (Chinese, Syrian, etc.), .4%.

Language: English.

Religions (census 1936): Church of England, 39.75%; Presbyterian, 23.44%; Roman Catholic, 13.13%; Methodist, 8.05%; Baptist, 1.57%; Others, 14.05%.

New Zealand, about 1,200 miles east of Australia, consists of two main islands and a number of smaller outlying islands so scattered that they range from the tropical to the antarctic. The islands, which have approximately the area of Italy, were discovered and named New Zealand in 1642 by Abel Jansen Tasman, a Dutch navigator. Captain James Cook explored them in 1769 and after him came many other sailors, sealers, whalers and traders. English missionaries landed in 1814 but made slow progress. On Jan. 22, 1840, to head off a possible French move to claim New Zealand, Britain formally annexed it. The New

New Zealand had 157,000 men in the armed forces and 124,000 in the Home Guard. Almost one-third of the whole male population of military age served overseas. The Air Force participated in the Empire Air Training Scheme and a number of New Zealand squadrons fought with the Royal Air Force as well as in Malaya. Naval forces include 3 cruisers, 4 corvettes and a number of mine sweepers.

State education is free, secular and compulsory between the ages of 7 and 15. Private schools mostly under religious auspices must conform to standards set by the state. About half the Maori attend the regular public schools; the remainder attend native village schools. In 1943, there were 2,230 State elementary schools with 245,592 students and 197 secondary schools with 46,389 students. The University of New Zealand has 6 constituent colleges including agricultural colleges at Lincoln and Palmerston North grouped together as the New Zealand School of Agriculture; university students number 4,373. About 10 percent of the National Budget is expended on education.

New Zealand's very advanced social security system, financed principally by a 5 percent tax on wages, salaries and firm incomes, gives benefits for old age, sickness, unemployment, maternity and hospitalization, widows, orphans, poor families and chronic invalids. It is apropos here to note that New Zealand's death rate is among the world's lowest. Social security fund receipts for the year ending March 31, 1945, were £NZ 18,770,000; expenditures, £NZ 19,332,000.

Primarily a grazing country, New Zealand is one of the world's largest exporters of mutton, lamb, wool, butter and cheese. In 1944 livestock included 33,200,298 sheep, 4,439,258 cattle (36 percent dairy cows) and 225,823 horses. Wool production for 1943-44 was 165,000 tons; butter exports, 206,973,700 pounds; cheese exports, 160,033,000 pounds. Scientific dairy management is well advanced. In 1944 New Zealand had 19,829,999 acres in cultivation, 90 percent of it in sown grasses. Outside of grass, the chief crop is wheat—7,208,485 bushels in 1944. Others are oats, barley, potatoes, onions, tobacco, fruits and vegetables. Total value of 1942-43 agricultural produce was \$550,491,600.

In 1942-43 there were 6,127 factories with 114,590 workers and output valued at \$537,947,433. The chief industries are the freezing of meat, curing of ham and bacon, and making of butter, cheese and condensed milk. Others of major importance are production of heat, light and power, woollen products, saw milling, furniture making and clothing manufacture.

Exports in 1943 totaled £NZ 1,838,940, and imports, including lend-lease receipts,

£NZ 95,148,017. Exported items by percentage were butter, 20; wool, 18.7; frozen lamb, 15.4; cheese, 12.6; hides and skins, 6.1; and canned meat, biscuits and gold. Imported items, excluding lend lease, included by percentage: cotton and linen goods, 5; machinery, other than electrical, 3.4; electrical goods, 2.9; drugs and chemicals, 2.8; silks, 2.1; and paper, sugar and yarn. Both imports and exports are under a rigid system of licensing. In 1942, 74.4 percent of exports went to Britain, 7.3 to the United States, 4.4 to Canada, 4.4 to Egypt, and 3.3 to Australia. Of imports, 35.5 percent came from Britain, 25.9 from the United States, 16.1 from Australia, 3.7 from Canada and 2.3 from India and Ceylon.

The 1944 merchant marine was 455 vessels of 84,159 net tons. Railway mileage in 1944 totaled 3,684, mostly government owned. Highway mileage in 1945 was 58,096. There were 244,753 telephones in 1944.

Governmental revenue for 1944-45 was £NZ 54,248,000, and expenditures, £NZ 53,033,000; both of these figures exclude social security and war taxation. War expenditure account receipts were £NZ 138,981,000 and expenditures, £NZ 130,009,000. The public debt in September, 1945, was £NZ 603,000,000. New Zealand, a member of the sterling bloc, had sterling balances outstanding to her in April of 1946 of an estimated £NZ 73,000,000.

New Zealand's two main components are North and South Island, separated by Cook Strait which varies from sixteen to 190 miles in width. North Island, of 44,281 square miles, is 515 miles long, volcanic in its south central part and containing many hot springs and beautiful geysers. In the southern part of North Island is Lake Taupo, covering 238 square miles in the center of a pumice-covered plateau.

South Island, of 58,092 square miles, has the Southern Alps along its west coast with Mt. Cook at 12,349 feet of elevation, the highest point in New Zealand. Over-all, New Zealand has plains, mountains, valleys, rivers and lakes and a climate ranging from subtropical in the north to mildly temperate in the south.

Principal minerals and 1943 production figures are: coal, 2,737,868 tons; gold, 149,150 ounces; silver, 280,786 ounces; and tungsten, pumice, manganese, silica sand and kauri gum (a fossil resin). About 20 percent of the total area is forested, and 324,473,000 board feet of lumber were cut in 1942.

The flounder, snapper and tarakihi account for 75 percent of New Zealand's fishery industry with 1943 output valued at \$1,882,153. There also are extensive oyster beds. The once important whaling industry declined sharply with development of pelagic whaling, and there is now

only one shore station in commercial operation.

Its many rushing streams give New Zealand a great volume of hydroelectric power. South Island has available about 4,000,000 horsepower, and North Island, 800,000. In 1942 New Zealand ranked sixth among the electrified countries of the world, with about 93 percent of the population having access to power.

Dependencies. The Aucklands, of 234 square miles, and Campbell Island, 44 square miles, are the principal of the outlying islands which have total area of 307 square miles. They are included within the geographical boundaries of New Zealand as proclaimed in 1847 and all are uninhabited. Six hundred miles north of the Aucklands are the volcanic Kermadecs, of 13 square miles, annexed in 1887.

In Polynesia a number of inhabited islands were brought under New Zealand control in 1901. Rarotonga and Mangaia, in the Cook group, total 84 square miles. Niue (or Savage) of 115 square miles, are the largest outside the Cook group. Total population in 1936 was 16,350. New Zealand also administers the Ross Dependency, an antarctic region claimed by Great Britain in 1923 and the Union (or Tokelau) Islands transferred in 1925 from the Gilbert and Ellice Islands colony.

Western Samoa. Area: 1,133 sq. mi. *Population* (1944): 65,643 (white 337; half-caste 3,117). *Status:* League of Nations mandate. *Administrator:* A. C. Turnbull. *Capital:* Apia. *Foreign trade* (1943): exports, £282,991; imports, £605,911. *Principal products:* Copra, cacao beans, bananas, tropical fruits, rubber.

The establishment of a tripartite protectorate over the islands in 1889 by Britain, Germany, and the United States, was followed by Britain's withdrawal in 1900 and the division of the islands between Germany and the United States. New Zealand troops occupied western Samoa in Aug. 1914, and New Zealand received a mandate over the islands in Dec. 17, 1920. The administrator is assisted by a legislative council and a consultative native council. There are 8 islands of which the largest and most populous are Savaii, of 703 square miles, and Upolu, of 430 square miles. They are largely mountainous but fertile. The inhabitants are Polynesians professing Christianity.

THE ROCK FROM DOWN UNDER. New Zealand gave Tom Heeney to the boxing world in the late '20s and early '30s. Although Heeney never did achieve the heavyweight championship of the world, he fought many leading heavyweight fighters of the United States and lost to Gene Tunney in the former's last ring appear-

ance. Heeney was born in Gisborne on May 18, 1898.

NORFOLK ISLAND: See *Australia*.

Outlying Territories

PAPUA (British New Guinea)—Status: Territory under Commonwealth administration.

Area: 90,540 square miles.

Population (1940): 338,822.

Administrator: H. L. Murray.

Capital: Port Moresby.

Foreign trade (1941): exports, \$1,591,000; imports, \$1,740,000; chief exports, rubber, gold.

Agricultural products: coconuts, rubber (1941: 1,000 tons).

Minerals: gold (1938: 33,249 ounces), copper.

Comprising the southeastern corner of the island of New Guinea, with the islands of the d'Entrecasteaux, Louisiade and adjoining groups, Papua was annexed by Queensland in 1883 and by the British Crown in 1888. It came under the control of the Australian Commonwealth in 1901 and became the Territory of Papua in 1906. Japanese forces invaded Papua in early 1942, but with the capture of Buna in December 1942, Australian control was restored. The administrator, appointed by the governor general of Australia, is assisted by a nominated legislative council.

In 1940 there were 1,822 Europeans in the territory. About 280,000 acres of land have been leased, chiefly by planters, and over 62,000 are cultivated. The natives have in large areas settled down to peaceful habits.

Papua (See AUSTRALIA).

Solomon Islands

This protectorate lying east of the island of New Guinea includes the islands of Guadalcanal, Malaita, San Cristoval, New Georgia, Ysabel, Choiseul, Shortland, Mono, Vella Lavella, Ronongo, Rendova, Russell, Florida, Rennell and numerous smaller islands. The islands which came under British protection late in the 19th century were the scene of several important U. S. naval and military victories during World War II. There are no native states and administration is carried on by a Resident Commissioner assisted by a nominated Advisory Council. The most important product is copra.

Tonga (Friendly Islands). This native Polynesian kingdom in the Pacific came under British protection through the terms of the Anglo-German agreement of November 14, 1899. The native queen is advised by a British Agent; the 23-member native Legislative Council is partly elected and partly nominated. The only important products are copra and bananas.

Western Samoa (See NEW ZEALAND).

Bulgaria (Republic)

(Bilgariya)

Area: 42,741 square miles (including southern Dobruja).

Population (est. 1940): 6,735,000.

Density per square mile: 157.5.

Premier: Georgi Dimitrov.

Principal cities (est. 1942): Sofia, 410,000 (capital); (census 1934), Philippopolis (Plovdiv), 99,883 (commercial center); Varna, 69,994 (Black Sea port); Ruschuk, 49,447 (chief Danube port); Burgas, 36,230 (Black Sea port).

Monetary unit: Lev.

Racial stock (1934): Bulgarian, 86.7%; Turkish, 10.1%; Gypsy, 1.3%; Others, 1.9%.

Language: See Racial stock.

Religion: Greek Orthodox, 84.4%; Moham-medan, 13.5%; Jewish, 8%; Roman Catholic, 8%.

Bulgaria, with a strife-ridden political past, is an agrarian country about the size of Virginia. It sided timidly with Germany in World Wars I and II hoping to win territory. Instead, it lost in both wars.

The first Bulgarians were a Tartar tribe that crossed the Danube from the north in 679 A.D., and took the province of Moesia from the Roman Empire. They adopted Slav dialect and customs and twice conquered most of the Balkan peninsula between 893 and 1280. After the Serbs subjected their kingdom in 1330, the Bulgars gradually fell prey to the Turks and from 1396 to 1878, Bulgaria was a Turkish province. In 1878, after the Turks cruelly suppressed a Bulgar revolt, Russia forced Turkey to give the country independence but the Central Powers tempered this to make Bulgaria autonomous under Turkish sovereignty, with the province of Eastern Rumelia under a Turkish governor.

In 1887 Prince Ferdinand of Saxe-Coburg-Gotha was elected ruler and on Oct. 5, 1908 he declared Bulgaria (and Rumelia) an independent kingdom and was proclaimed Tsar of the Bulgarians.

In 1912 in the First Balkan War, Bulgaria joined its neighbor states and defeated Turkey, but then it bickered with Serbia and Greece over division of Macedonia and was beaten by them in the Second Balkan War which lasted one month—July of 1913.

Still coveting Macedonia, Bulgaria joined Germany in World War I and lost. On Oct. 3, 1918, Tsar Ferdinand abdicated for his son who became Tsar Boris III. The Treaty of Neuilly the next year disarmed Bulgaria, reduced it to 1878 size, and levied a heavy indemnity. Internal disorder, underground intrigue and Agrarian-Communist agitation marked the next fifteen years.

WORLD WAR II. Boris assumed dictatorial powers in 1935. When Hitler gave him Southern Dobruja, taken from Ru-

mania, in 1940 the weak but land-hungry Boris joined the Nazis in war the next year and occupied parts of Yugoslavia and Greece. Meanwhile, the Nazis moved in on Bulgaria and with the tide of war swinging inexorably against them, they tried to force Boris to send his troops against the Russians. Boris resisted and died mysteriously on Aug. 28, 1943. Many rumors attributed his death to German poison or bullets.

Simeon II, the infant son of Boris, became the nominal ruler, under a regent, and Bulgaria began to make desperate gestures of friendship for the Allies. Three days after Russia declared war on Bulgaria on Sept. 5, 1944, Bulgaria declared war on Germany. Russian troops streamed in the next day and under an informal armistice a coalition cabinet was set up under Kimon Georgieff.

It soon became apparent that this regime, the Fatherland Front, was Communist dominated, notably by Georgi Dimitrov, a former secretary-general of the Communist International, and a Bulgarian labor leader.

Elections scheduled for Aug. 26, 1945 were postponed as a result of U. S. protest against the "undemocratic" procedure, but were held Nov. 18, 1945, with only one list of candidates—the official Fatherland Front list—being placed before the voters. At the Foreign Ministers' Conference in Moscow in December, 1945, Russia offered to seek the inclusion of two Opposition ministers in the Cabinet, but despite U. S. complaints in February, 1946 the Cabinet contained no Opposition men when reorganized March 31, 1946.

ALLIED CONTROL COMMISSION. Pending signing of the final peace treaty, Bulgaria is under an Allied Control Commission of British, U. S., and Soviet military representatives. The Soviet chairman of the council is also commander of the Soviet occupation troops in Bulgaria. U. S. and British participation is, for the most part, nominal and the country is actually controlled by Soviet military authorities.

Tsar Simeon II (1937—), only son of King Boris III and of Queen Ioanna of Italy, succeeded to the throne Aug. 28, 1943. The first three regents—Prince Kyril, the King's uncle, Prof. Filoff, and Gen. Mikhoff—were executed for Axis collaboration Feb. 2, 1945; they were succeeded by Todor Pavloff, a Communist, Prof. Venelin Ganeff, and Tsverko Bobosheffski. Simeon went into exile when Bulgaria voted to become a republic.

GOVERNMENT. Under the Constitution of 1879, as amended in 1893 and 1911, Bulgaria was a constitutional hereditary monarchy. But the executive power is exercised now by the prime minister and his cabinet. Legislative power is exercised by a unicameral Parliament (Sobranje), whose

number is fixed by the Constitution at 227, but which is now composed of 277 members. The official Fatherland Front list adopted in the elections of November, 1945, consisted of 94 Communists, 94 dissident Agrarians, 46 Zvenoists, 32 dissident Social Democrats and 11 Radicals. In Aug. 1945 the two chief Opposition parties—the Agrarians and Social Democrats—withdrew from the Fatherland Front; those who disapproved of this move organized dissident parties under the same names. The Minister of the Interior appoints the governors of the 7 regional counties and of the districts into which the counties are divided, as well as the mayors of the municipalities. There is a Supreme Court of Cassation at Sofia and 3 regional Courts of Appeal.

DEFENSE. Bulgaria's army, by the Treaty of Neuilly in 1919, was limited to a voluntary force of 20,000 men, but this provision was nullified by a treaty signed with the Balkan Entente in 1938. The peace-time strength of the army became about 60,000. In World War II it rose to about 500,000, in fifteen divisions. It is being organized along Soviet lines by Red Army instructors and the political commissar system has been introduced. The so-called People's Militia, a Communist-run police organization, is controlled by the Minister of the Interior. The number of Russian occupation troops in July, 1946, was unofficially estimated at 150,000.

The Bulgarian peace treaty proposed at the Paris Peace Conference in 1946 would limit Bulgaria to an army of 55,000, a navy of 3,500 and an air force of ninety planes, none of them bombers.

ECONOMIC AND SOCIAL CONDITIONS. Though elementary education is compulsory and free between 7 and 14, the last census, in 1934, showed 20.4 percent of the males and 42.8 percent of the females illiterate. Schools in 1939 included 252 kindergartens, 4,743 primary schools, and 2,044 high schools with a total enrollment of 969,599. One university (Sofia) had an enrollment of 6,030.

Most of the people are Greek Orthodox. Clergy of all faiths are paid by the state. The national language, Bulgarian, is closely related to Russian; both employ the Cyrillic alphabet.

Bulgaria is predominately agrarian with 80 percent of the population engaged in agriculture. Because of the mountainous character of the country, however, only about 43 percent of the land is tilled or used for pasture. Most landholdings are small, and primitive methods of cultivation predominate. More than half the cultivated area is devoted to cereals, including wheat (1939 crop: 2,134,604 tons), corn, barley, oats, and rye. Other crops are tobacco (1939: 38,911 tons), the leading export, and alfalfa, cotton, flax, potatoes,

and sunflower seed. There are extensive vineyards (283,526 acres produced 678,686 tons in 1938) and rose gardens in the southern valleys. Production in silkworm cocoons is highly developed (1938: 2,178,767 kilos). Livestock graze on the mountain slopes. In 1934 Bulgaria had 531,500 horses, 1,497,600 cattle, 8,839,500 sheep, 913,000 goats, 902,000 swine, and 12,772,740 poultry.

Industries of Bulgaria are of minor importance and with three exceptions—preparation of tobacco leaf, distillation of attar of roses, and flour milling—are confined to domestic markets. There were in 1938 a total of 3,089 industrial undertakings, large and small, with 74,305 workers.

Foreign trade necessarily consists of the exchange of agricultural products for cheap manufactures. Exports in 1939 amounted to \$73,450,000, led by leaf tobacco, 41 percent; grapes, 7.6 percent; eggs, 8.4 percent; wheat, 7.3 percent; corn, prunes, swine, and attar of roses. Imports in 1939 were \$62,398,000, led by machinery and parts; wool and wool thread; automobiles and parts, cotton (raw); cotton thread and textiles; iron and manufactures, raw skins, sheet iron, and drugs. Germany received 58.9 percent of the exports and supplied 51.9 percent of the imports; Germany's prewar place in Bulgarian foreign trade has been taken by the Soviet Union.

Although the Danube is navigable for 243 miles on the northern border, only a comparatively small percentage of prewar Danube trade tonnage was Bulgarian. The Bulgarian merchant marine in 1939 consisted of 14 vessels of 17,476 tons. Tonnage entering Black Sea ports, principally Varna and Burgas, totaled 1,776,576; and Danube ports, notably Ruschuk (Russe), 2,429,642. Railroad mileage, all nationalized, totaled 2,211 in 1939; highway mileage was 19,638. Railroads carried 6,083,373 tons of freight in 1938. Telephones in 1943 numbered 35,947.

Governmental revenues in 1939 were \$95,106,472; expenditures \$96,905,706. The total national debt was \$276,905,904, of which \$153,700,701 was external. Foreign investments in Bulgaria prior to World War II amounted to 2,179,000,000 leva, of which about 27.5 percent was Belgian, 23.5 percent Swiss, 11.4 percent French, and 10.9 percent U. S. The already precarious financial position of the government has been made worse by Red Army occupation costs and reparations to Russia.

TOPOGRAPHY. Two mountain ranges and two great valleys mark Bulgaria's topography. The Balkans cross the center of the country, almost due east-west, rising to a peak of 7,800 feet. The Rhodope Range breaks off from the Balkans in the west, curves and then straightens out to run nearly parallel along the southern border.

In between is the valley of the Maritsa, Bulgaria's principal river. Between the Balkans and the Danube, which forms most of the north boundary with Rumania, is the Danubian tableland, cut up by several short rivers. Southern Dobruja, a fertile 2,900 square miles below the Danube delta, is an area of low hills, fens and sandy steppes.

Bulgaria's climate produces cold winters and warm summers approaching the subtropical in the south. Rain and snowfall average twenty to forty inches a year.

Soft coal is Bulgaria's only important mineral and most of the mines are state-owned. The 1939 output was: coal, 187,433 tons; lignite, 2,352,308 tons. Other mine products, some of them increased on Nazi insistence in World War II, include chromite, copper, iron ore, gold, silver, rock salt and manganese ore.

About 30 percent of the country is forested, but a large part is unproductive scrub and most of the valuable woods are virtually inaccessible. Wood imports usually exceed exports. Bulgaria's annual fish catch averages about 3,500 tons.

Chile (Republic)

(República de Chile)

Area: 286,322 square miles.

Population (est. 1944): 5,023,539.

Density per square mile: 18.29.

President: Gabriel Gonzales Videla.

Principal cities (est. 1944): Santiago, 952,075 (capital); Valparaiso, 209,945 (chief port); Concepción, 85,813 (farming center); Viña del Mar, 65,916 (resort center); Talca, 50,964 (farming center).

Monetary unit: Peso.

Racial stock (estimate 1938): White, 30%; Mestizo, 65%; Indian, 5%.

Language: Spanish.

Religion: Roman Catholic.

Chile, rich in minerals, has a relatively tranquil history amid South America's long record of revolution and strife. Its first contact with the white race came in 1535 when Diego de Almagro, an associate of Pizarro, led an unsuccessful invasion from Peru. Pedro de Valdivia founded Santiago in 1540. On Sept. 10, 1810, Chile rebelled against Spanish rule but independence was not won completely until 1817 when Bernardo O'Higgins and José de San Martín finally crushed the Spanish.

Chile, which has never lost a war, fought with Bolivia and Peru in 1879-83 and won the province of Antofagasta, Bolivia's only outlet to the Pacific, as well as extensive acreage from Peru. In World War I Chile was neutral. The overthrow in 1931 of Colonel Carlos Ibáñez, who had seized power in 1927, was followed by a brief

chaotic period in which five presidents tumbled in and out of office, but Dr. Arturo Alessandri, 1932-38, did much to restore Chile's shattered political and economic reputation.

Pedro Aguirre Cerda, victor in the 1938 elections, initiated an extensive socialist program but it was cut off by his death on Nov. 25, 1941. The term of Don Juan Antonio Ríos, elected as Radical candidate of the Popular Front in 1942, was marked by political dissension and labor difficulties. One trouble was the situation brought about by the war. With its minerals inviting booty, and with a 2,600-mile coast line to defend, Chile feared to become an Axis enemy. Under external pressure, and internal pressure notably from its strong Communist party, Chile finally broke relations with the Axis on Jan. 20, 1943, but did not declare war on Japan until Feb. 14, 1945.

Meanwhile, well before he died on June 27, 1946, Ríos was forced by serious illness to turn over his powers to Alfredo Duhalde, Senate president. Chile has no vice president. As a result of the special election of Sept. 4, 1946, Gabriel Gonzales Videla became president.

The nation elects a president every six years, a Senate of forty-five members every eight years, and a Chamber of Deputies of 147 members every four years. The president is assisted by a nine-man cabinet responsible to him but subject to impeachment by Congress, which also may override a presidential veto by two-thirds vote. All literate male citizens over twenty-one vote in elections. The president names the administrators of the twenty-five provinces. There is a supreme court in Santiago and eight appeals courts.

Military service is compulsory beginning at twenty with an initial training period of nine months, after which a civilian is on reserve until forty-five. In 1943 the army numbered 725,000. In 1945, about 30 percent of the Chilean budget went to the military. The navy, normally 8,000 men strong, had at the start of 1946 one old battleship of 28,000 tons, two old cruisers, eight destroyers, nine submarines, two coast defense craft and a sloop. The air force, with 200 planes and 3,000 men in 1940, expanded greatly in World War II. Under a 1945 agreement, Chilean forces were to be advised by a U. S. naval and military mission.

Education, free and compulsory between seven and fifteen, is directed by the central government, and in 1943 illiteracy was estimated at 24 percent, third lowest in Latin America. School enrollment in 1943 was 576,900 in 5,364 primary schools, 87,265 in 418 intermediate schools, and 6,402 in five universities, including the State University of Chile founded in 1842. About 20 percent of the 1945 budget went for education.

Chile's population increased 17 percent from 1930 to 1940. The base of the white population is Spanish, though there are some German, English, Irish and Scotch. Roman Catholicism is the dominant religion, but church and state separated in 1925. At the last Papal consistory, the Archbishop of Santiago was created a cardinal.

Chilean agriculture is mostly confined to its temperate central valley, similar to that of California. The available productive land—60,219,583 acres in 1936—is less than 4 percent of the country and most of it must be irrigated. Wheat is the leading crop, followed by potatoes, oats, barley, corn, string beans and fruits. Grapes, next to wheat in acreage, produced 100,000,000 gallons of wine in 1945. Feudal-type estates, averaging 2,500 acres, predominate. Cattle in 1942 totaled 2,346,384. Sheep in 1936 totaled 5,749,069; horses, 527,827; asses and mules, 93,525; and swine, 571,495. The livestock industry does not supply local needs, but wool is used in Chilean textile mills and wool and hides are exported.

Already enjoying a favorable balance in foreign trade, Chile quadrupled it to \$130,000,000 during World War II. Imports in 1944 totaled \$149,092,000 against exports of \$197,746,000. Copper, nitrate and iodine make up 70 percent of exports, followed by wool, hemp, legumes, rice and sheep skins. By value, the United States took 64 percent of exports; Argentina, 8 percent; Brazil, 4 percent; Peru, 2 percent, and Britain, 1 percent. By value, the United States supplied 43 percent of imports; Argentina and Peru, 17 percent each; Brazil, 10 percent, and Britain, 6 percent.

Although Chile dreams of great industrial development, and has all the raw materials except coal and tin, progress continues slowly. Except for mineral processing, most manufacturing is of low-priced consumer goods, particularly textiles. In 1940 there were 4,034 factories with 123,091 workers.

Highway mileage totals 28,125, about 35 percent improved. Rail mileage is 5,407, partly electrified. Chile has ninety-two airports serving three major lines. The 1940 merchant marine totaled 106 vessels of 160,232 gross tons, and the 1942 tonnage carried was 1,631,000, much of it coastwise. Telephones in 1942 numbered 96,642.

Deficit financing continues to be a serious problem. The 1945 budget was 4,749,036,000 pesos, with an accumulated deficit of 562,000,000 pesos. The 1945 national debt was 5,936,100,000 pesos. U. S. investments in 1942, mostly in mining and manufacturing, were \$413,983,000. British investments were estimated at £50,114,361.

A long mountainous land, Chile, 2,661 miles in length and varying from 250 to 46 miles in width, is one-third covered by the

towering barrier ranges of the Andes. Seventeen of South America's forty-one tallest peaks, all over 20,000 feet, lie wholly or partly in Chile. In the north is the mineral-rich Atacama Desert, between the coast mountains and the Andes. In the center is a 700-mile-long valley, thickly populated, between the Andes and the coast plateau. In the south, the Andes border on the ocean.

At the southern tip of Chile's mainland is Punta Arenas (Magallanes), the southernmost city in the world, and beyond that lies the Strait of Magellan and Tierra del Fuego, the island divided between Chile and Argentina. Chile's short rivers are useful only for irrigation and as electric power sources. While the country has few good harbors, it has many ports, at most of which tonnage must be loaded or unloaded by lighters. In the south Chile's rainfall is extremely heavy, in the north, almost nonexistent.

The basis of the country's economy is its mineral resources in the northern desert provinces of Atacama and Tarapaca. There is found the only natural nitrate in the world. More than 60 percent of the world's iodine is obtained as a by-product of nitrate processing. Chile's world monopoly in nitrate, however, is not what it used to be before the discovery of the synthetic product.

The world's largest copper reserve, estimated at 134 billion pounds, is in Chile, and also more than 900 million tons of high grade iron ore. The reserve of Chilean coal, noted for quantity rather than quality, exceeds two billion metric tons.

Mineral production for 1944 shows: coal—2,300,000 metric tons; iron ore—670,000 metric tons; and copper—487,600 metric tons. Figures for 1943 show silver—1,090,000 ounces; mercury—19,000 pounds; manganese ore—114,100 metric tons; and gold—270,000 ounces. Nitrate production in 1942 was 1,559,034 short tons. Cobalt, zinc, tungsten and molybdenum also are produced.

Forests estimated to cover 40 to 50 million acres in the southern provinces yield a variety of commercial wood including conifer, laurel and magnolia. Timber production in 1941 came to 273,981,750 board feet. Chile's annual 40,000 tons of sea food includes cod, eel, oysters, sawfish, sardines and tuna.

Subsidies were provided for national vessels using the Panama Canal and the Strait of Magellan and other measures adopted to stimulate a commercial marine. Shipping reported for 1938 was 99 craft with a tonnage of 16,422. In 1936, 369 vessels cleared at Chilean ports while the coastal shipping amounted to 1,702,400 tons. The postoffices in 1936 numbered 1,038, and handled 92,130,893 pieces of mail.

China (Republic)

(Chung-Hua Min-Kuo)

*Area: 3,858,900 square miles.

*Population (est. 1945): 461,000,000.

Density per square mile: 119.2.

President: Chiang Kai-shek.

Premier: T. V. Soong.

Principal cities (est. 1945): Shanghai, 3,726,757 (chief port, industrial and financial center); Peiping, 1,550,561 (political, educational center); Tientsin, 1,217,646 (commercial center); Canton, 1,115,000 (southern seaport); Chungking, 1,037,630 (wartime capital); Nanking, 1,019,148 (capital).

Monetary unit: Chinese dollar.

Racial stock: Chinese.

Language: Chinese.

Religions: Confucianism, Buddhism, Taoism, Mohammedanism, Christianity.

*Including Formosa and Manchuria; excluding Outer Mongolia.

HISTORY. China, second in size and first in population among the countries of the world, was the first victim of the aggressions that led to World War II. Japan seized Manchuria in 1931-32 and invaded China proper in 1936. In the years that followed, China suffered untold destruction and lost millions of lives through enemy action or starvation. Ancient and wise but backward, China was not only fighting a powerful enemy. It was also torn by internal dissensions between the Chiang Kai-shek government and the Communists of the north. When 1945 finally brought victory, China still suffered cruelly. The war's wake brought on new famines and a renewal of the old internal struggle. In 1946 the central government and the Communists still fought a bloody civil war that raged sporadically, despite U. S. efforts to bring the sides together in peace.

Chinese recorded history is among the world's oldest. By 2000 B. C. Chinese were living in the Yellow River basin and they had achieved an advanced stage of civilization by 1200 B. C. The great philosophers, Lao-tse, Confucius, Mo Ti, and Mencius lived during the Chou dynasty from 1122 to 249 B. C. The warring feudal states were first united under Emperor Shih Huang Ti who began the Great Wall. Under the Han dynasty, from 206 B. C. to 22 A. D., China prospered and opened trade with the West.

The Mings, the last of the native rulers (A. D. 1368-1644), overthrew the Mongol or Yuan dynasty (1279-1368) established by Kublai Khan whose dominions extended into eastern Europe. The weakening Mings in turn were overthrown in 1664 by invaders from the north, the Manchus. The Chinese closely restricted foreign activities and by the end of the 18th century only Canton (and the Portuguese port of Macao) were open to European merchants. Following the Anglo-

Chinese war of 1840-42, however, numerous treaty ports were opened and Hong Kong was ceded to Britain. Treaties signed after further hostilities (1856-60) weakened Chinese sovereignty, removed foreigners from Chinese jurisdiction and legalized opium trade. The disastrous Sino-Japanese War (1894-95) was followed by a scramble for Chinese leases and concessions by European powers which resulted in the nationalist Boxer Rebellion (1900), suppressed by an international force. The death of the Empress Dowager Tsu Hsi and the accession of the infant emperor Hsuan T'ang were followed by a nationwide rebellion led by Dr. Sun Yat-sen who became first President of the Provisional Chinese Republic in 1911. The Manchus formally abdicated on Feb. 12, 1912. Dr. Sun resigned in favor of Yuan Shih-kai who suppressed the republicans but was forced to abandon his intention of declaring himself Emperor by a serious rising in 1915. Yuan's death in 1916 was followed by years of civil war between rival militarists and Sun's republicans. The death in 1925 of Dr. Sun, who had controlled only the Canton area in opposition to the recognized regime, was followed by a revival of the Kuomintang which practically defied him. Nationalist forces led by Gen. Chiang Kai-shek and advised by Soviet experts soon occupied most of China, setting up a Kuomintang regime in 1928. Internal strife continued, however, both with other warlords and with the Chinese Communists. Soviet advisers were ousted. An alleged explosion on the South Manchurian Railway on Sept. 18, 1931, brought invasion of Manchuria by Japanese forces, who installed the last Manchu emperor, Henry Pu-Yi as nominal ruler of the puppet state of Manchukuo. Japanese efforts to take China's five northern provinces in July, 1937, were resisted by Chiang Kai-shek who had succeeded in uniting most of China behind him. Within two years Japan seized most of the ports and railways. The Kuomintang government retreated first to Hankow and then to Chungking while in "Occupied China" the Japanese set up a puppet government at Nanking headed by Wang Ch'ing-wei. In 1943 Chiang became political as well as military leader of "Free China."

When the Japanese surrendered in 1945 a treaty was signed with the Soviet union providing for Soviet withdrawal from Manchuria, joint Soviet-Chinese control of Manchurian railways, a joint Chinese-Soviet naval base at Port Arthur and a free port at Dairen. The surrender touched off a race between Nationalist and Communist forces to control important centers in North China and Manchuria. Agreement was reached for the establishment of a Political Consultative Council representing all groups on Oct. 10, but fighting again broke out early in 1946.

with the Communists controlling northern and central Manchuria and much of north China.

GOVERNMENT. NATIONAL. The National Government is based on a law promulgated by the Kuomintang on Oct. 4, 1928, and revised in 1931, 1932, and 1943. The highest state organ is the 30-member State Council whose chairman is President of the National Government. Under the State Council are five Yüan—the Executive Yüan (Cabinet), the highest executive organ of the state; the Legislative Yüan, whose members are nominated by the Government; the Judicial Yüan; the Examination Yüan which controls the civil service; and the Censor or Control Yüan which is responsible for the impeachment of Government officials and the auditing of Government accounts. The advisory People's Political Council, consisting of 240 members appointed by the Kuomintang, is a semi-legislative assembly acting until the formal election of a National Congress.

DEFENSE. Military service is compulsory; the initial training period is one or two years. General Chiang is supreme commander of all forces. Until the spring of 1945 China maintained a nominal strength of more than 300 divisions totaling 5,000,000 men. Then, a reorganization disbanded units of about 1,700,000 men, and modernized a number of others with U. S. weapons. The navy, on Dec. 31, 1945, had sixteen gunboats and several small Japanese warships.

The separate Communist armies, in Manchuria and north China, number about 1,000,000 men equipped with considerable captured Japanese materiel. The Communists have about 2,000,000 men in irregular forces.

SOCIAL AND ECONOMIC CONDITIONS.

EDUCATION. Recent years have seen marked progress toward mass education for men and women. Excluding schools in former occupied areas, there were in July, 1945, 145 institutions of higher learning with an enrollment of 73,667; 3,455 secondary schools with an enrollment of 1,101,087 and 265,417 primary schools with about 18,000,000 pupils. Many of the schools were being moved back in 1946 to their original campuses. Education is nominally compulsory from 6 to 12. The mass education and literacy movement has been accompanied by the replacement of the old classical or "dead" Chinese language with the popular vernacular (Pai-hua) of the Mandarin dialect, employing perhaps 1,000 of the most essential of the many thousands of Chinese ideographs.

POPULATION AND RELIGION. Estimates of China's population vary and are only calculated guesses. The population is quite unevenly distributed with most of it in the following five areas: the central portion of the northern plain (Shantung);

the Yangtze delta, a coastal belt extending southward from the Yangtze delta to the Canton delta; the Hupeh basin centered around Hankow; and the isolated Red basin of Szechwan, far to the west. Most Chinese who are not Christians or Moslems practice all three of the native religions—Confucianism, Buddhism and Taoism. Almost 10 percent of the population is estimated to be Moslem; there are also many Roman Catholics and Protestants.

AGRICULTURE. China is essentially agricultural, with nearly 80 percent of the population dependent on the land for livelihood. Subsistence crops are necessarily emphasized but China is not self-sufficient in food. Cultivation is intensive, holdings are small, and irrigation is widely practiced. The three most important food crops—rice, wheat and millet—occupy about 69 percent of the cultivated area. The range of crops is wide. In the north, wheat, barley, corn, sorghum, millet and other cereals and beans and peas predominate whereas in the south, rice, sugar and indigo are most important. The Yangtze basin, one of the most favored agricultural regions in the world, is China's premier granary. Tea, the chief beverage, is grown mainly on the central uplands and coastal ranges.

Silkworm culture, practiced widely and especially in the lower Yangtze Valley, yields over 200,000 tons of cocoons a year. Cotton, the major purely industrial crop, runs from 2,500,000 to 4,000,000 bales a year. Soybeans are of ever-increasing importance. Other crops include fibers, tobacco, groundnuts, and many medicinal plants and spices.

AGRICULTURAL CROPS, 1941

Crop	Tons
Rice	37,696,830
Ramie	15,267,990
Wheat	9,098,112
Barley	4,066,215
Corn	3,665,968
Beans	2,309,021
Peas	2,068,895
Soya Beans	1,912,741
Millet	1,697,851
Groundnuts	1,258,925
Cotton	296,493
Silk (1939, exports only)	5,193

The urgent need for subsistence crops confines grazing grounds for sheep and cattle to the dry northwest and to mountain pastures. However, such animals as goats, poultry and especially pigs are raised everywhere and pigs' bristles and eggs are important exports. In 1941, livestock in 22 of the 24 provinces of China proper was estimated as follows: Poultry, 168,593,000; swine, 37,740,000; cattle, 12,-

727,000; buffaloes, 8,079,000; goats, 7,171,000; sheep, 4,210,000.

INDUSTRY. Industrially, China is still backward. Factory development has been mainly in the manufacture of cottons. There are also silk and flour mills, match factories, tanneries and some steel and cement mills. The production of consumers' goods far exceeds that of producers' goods, which must still be imported. Much of the industry which had been developed in the lower Yangtze Valley and the Shanghai area was moved westward in 1938 and 1939.

TRADE. Excluding goods exchanged under barter arrangements, exports in 1944 were Ch.\$789,907,846 and imports, Ch.\$3,494,918,980. Principal imports were dyes, pigments, paints, varnishes, paper, printed material, raw cotton, yarn and thread, chemicals, and metals and ores. Principal exports were textile fibers, animals and animal products, spices, and stone, earth and sand.

COMMUNICATIONS. Exploitation of many of China's natural resources has been handicapped by the lack of internal communications. There is an extensive system of inland waterways and canals, however, and in central and south China most of the trade is carried on by water. The Yangtze is navigable for ocean vessels in the summer as far as Hankow (595 miles). Chungking, 1,427 miles from the sea, can be reached by special steamers. The modern highway system now totals about 80,000 miles. The railway system, totaling about 13,000 miles, is concentrated in north China and Manchuria and in the lower Yangtze basin. The principal north-south artery is the Peiping-Hankow line connecting at Hankow with the Hankow-Canton line. The principal port, Shanghai, at the mouth of the Yangtze, accounted for 50 percent of the total maritime customs revenue in 1939 and is the major port of the Far East.

FINANCE. The budget in 1945 was estimated about Ch.\$200,000,000,000, 190 times larger than that of the year 1937; actual expenditures were even greater. Only about 45 percent of the budget could be met by taxation. From 1938 to Aug. 1945, the Soviet Union, Britain and the United States extended loans to China totaling £58,047,000 and \$870,000,000. In addition, lend-lease assistance from March 11, 1941 to Dec. 31, 1945 amounted to \$1,335,632,000. From V-J-Day until Feb. 28, 1946, assistance totaled \$602,045,000.

NATURAL FEATURES AND RESOURCES.
TOPOGRAPHY. China has about twice the area of the continent of Europe and about $1\frac{1}{4}$ times the area of the continental United States. Its coast line is roughly a semi-circle, about 2,150 miles long. The greater part of the country is mountainous and only in the lower reaches of the

Yellow and Yangtze Rivers are there extensive low plains. The principal mountain ranges are the Tianshan chain, to the northeast; the Kunlun chain, which attains a height of 20,000 feet, running south of the Takla-Makan and Gobi Deserts; and the Trans-Himalaya, which connects the Kunlun with the borders of China and Tibet. Manchuria is largely an undulating plain connected with the north China plain by a narrow lowland corridor. The four provinces of Inner Mongolia contain the relatively fertile southern and eastern portions of the Gobi. The large island of Hainan (13,500 square miles) lies off the southwestern coast.

HYDROGRAPHY. China proper consists of three great river systems. The northern part of the country is drained by the Hwang Ho (Yellow), 2,700 miles long and mostly unnavigable. The central part is drained by the Yangtze, the sixth longest river in the world (3,200 miles). The Si-Kiang in the south is about 1,250 miles long and navigable for a considerable distance. In addition, the Amur forms the northeastern boundary for 1,500 miles.

CLIMATE. There are great diversities of climate. North China has the coldest winters in the world for its latitude. The Yangtze Valley is warmer, with winter temperatures more like those of Britain, while the south has warm subtropical winters. Summer temperatures are uniformly hot throughout China. South China receives regular rainfall averaging from 40 to 60 inches but in the north rainfall is irregular and not as heavy, and neither droughts nor floods are uncommon.

Iron ore, far less plentiful than coal, is mined principally in the lower Yangtze Valley. Tin, mined in Yunnan and southwest Szechwan, is the major export mineral. Of some rarer minerals, notably antimony and tungsten, China is normally the world's leading producer. Lead, zinc, silver, mercury and gold are also mined.

LEADING MINERALS OF CHINA, 1940

Mineral	Amount
Coal	19,652,907 tons
Salt	3,306,900 "
Tin	11,200 "
Antimony	6,042 "
Tungsten	3,430 "
Mercury	237 "
Bismuth Ore	20 "
Gold	478,188 Fine ounces

FORESTS, FISHERIES. China urgently needs reforestation. Most forests left are on less accessible mountain slopes. Bamboo is cultivated in groves throughout China south of the Tsinling. Both sea and river fisheries are rich and varied, and fresh or salted fish is a staple food in many districts. The coastal fisheries of Shantung, Chekiang and Kwantung are especially valuable.

Chinese Outer Territories

MANCHURIA. *Status:* Integral part of Republic of China, partially occupied by Chinese Communist forces. *Area:* 503,143 square miles. *Population* (est. 1940): 43,-233,954. *Foreign trade* (1939): exports, \$206,399,000 (62.5 percent to Japan); imports, \$362,679,000 (84.8 percent from Japan); chief exports, soya beans 32.3 percent, bean cake 9.7 percent, coal 3.9 percent, millet, sorghum, corn. *Agricultural crops* (1939, in tons): soya beans, 4,360,699; sorghum, 5,091,524; millet, 3,887,812; wheat, 1,046,083; corn, 2,716,067. *Industries:* Iron and steel, machinery, textiles, food processing, chemical. *Minerals:* coal (1939: 19,000,000 tons), iron ore (1936: 2,131,848 tons), gold, lead ore, manganese ore.

Manchuria includes the three northeastern provinces of China—Fengtien, Kirin, and Heilungkiang, which before the Japanese invasion of 1931 were governed apart from China proper. A separate state (Manchukuo) was set up under Japanese sponsorship (Feb. 18, 1932) which finally assumed the form of an empire with Henry Pu-Yi, last Manchu emperor of China, installed as emperor (Mar. 1934). It was never recognized by China, the United States, or Britain. The regime was a transparent screen for Japanese control exercised by the Kwantung army. The Japanese hold on Manchuria was broken when it was invaded by the Red Army in August 1945. The decision reached at the Cairo conference (1943) that Manchuria should revert to Chinese possession was confirmed by the Sino-Soviet treaty signed Aug. 14, 1945. The treaty provided for Chinese control of Manchuria, but made important economic concessions to the Soviet Union. The extensive Manchurian railway network was to be under joint Soviet-Chinese control for 30 years, Port Arthur was to be a joint Sino-Soviet naval base, and Dairen was to be a free port. Soon after the Japanese surrender, Chinese communist troops moved into the country and continued to control most of northern and central Manchuria after the Soviet evacuation.

As a result of extensive Japanese development, Manchuria is probably the richest industrial area in China, containing about two-thirds of her heavy industry and half her railway mileage.

Manchuria is also a rich agricultural region with a cultivable area estimated at 57,300,000 acres. The principal commercial crops are the soya beans and wheat. Rice and cotton are also grown. There are good grazing lands; in 1937 there were 1,683,000 cattle, 2,000,000 sheep, 1,250,000 goats, 2,000,000 horses, and 5,335,700 swine. Lumber from the forests of the East Manchurian Highlands supplies the needs not only of the Manchurian plain but also of North China.

FORMOSA (TAIWAN). *Status:* Part of Republic of China. *Area:* 13,429 square miles. *Population* (1940): 5,872,084. *Capital:* Taihoku (pop. 1940: 326,407). *Foreign trade* (1939): exports, \$153,944,000 (82.9 percent to Japan); imports, \$106,097,000 (83.4 percent from Japan); chief exports, sugar, 43.8 percent (1,446,000 tons); rice, 21.7 percent (626,000 tons); bananas, 2.9 percent; canned pineapple, 2.3 percent; camphor, 1 percent (675 tons). *Agricultural products* (1938, in tons): sugar cane, 9,737,571; rice, 1,481,836; sweet potatoes, 1,902,805; bananas, 222,283; pineapples, 76,721; tea, 14,443. *Industries:* sugar refining, canning, chemical, wood and paper. *Minerals* (1936, in tons): coal, 1,922,411; gold-silver-copper ore, 218,614; gold, 43,-740 ounces; petroleum, silver, sulphur. *Forest products:* timber, camphor, bamboo.

Formosa is a large island in the western Pacific, separated from China to the west by the Taiwan straits (narrowest point, 90 miles).

THE PESCADORES (BOKOTO) (about 50 square miles) and other outlying islands are administratively a part of Formosa. The island, ceded to Japan in 1895 after the Sino-Japanese War, remained Japanese until restored to China in 1945.

Most of the inhabitants are of Chinese stock. There are also about 150,000 aboriginal tribesmen in the mountainous interior and (in 1940) 308,845 Japanese. Sugar cane, grown under the plantation system, is the most prosperous of the island's developments. Formosa is one of the world's chief sources of camphor and there were government monopolies of camphor, salt, opium and tobacco. Total value of manufactures in 1938 was \$108,-085,349. Forest resources are enormous. Railway mileage (1939) totaled 2,463 and roads, 11,300.

TIBET. *Status:* Under nominal Chinese suzerainty but politically independent. *Area:* 469,294 square miles. *Population* (est. 1936): 3,722,000. *Capital:* Lhasa (est. 20,000). *Ruler:* The 14th Dalai Lama (Lingh Lamutanchu). *Foreign trade:* No data available; exports, wool, live animals, salt, hides, borax, tea, musk. *Agricultural products:* barley, fruits, pulse, vegetables. *Minerals:* borax, salt, coal, gold.

Tibet, north and northwest of the Himalayas, is the highest country in the world, averaging 16,000 feet in elevation. It has many peaks ranging from 20,000 to 24,600 feet high. Chinese suzerainty over Tibet was established in the 18th century. The area was invaded by a British expeditionary force in 1904, but the Anglo-Russian Convention of 1907 recognized China's influence and stipulated that neither Russia nor Britain should interfere in Tibet's affairs.

Chinese representatives were expelled in 1912, but in recent years Sino-Tibetan relations have improved, and early in 1944 a delegation of 20 Lamaists visited Chungking and greeted Chiang Kai-shek as "our supreme leader." The government is a theocracy, ruled by the Dalai Lama who acts through a regent or minister appointed from among the chief lamas.

The religion and the predominant factor in Tibet's social system is Lamalism, a late form of Buddhism modified by animism and primitive magic. Education is in the control of the many monasteries, some of which have over 1,000 monks. A large number of the population are lamas, mostly celibates. Both polyandry and polygamy are practiced. Some agriculture and herding is possible in the valleys.

SINKIANG (CHINESE TURKESTAN). *Status:* Chinese province. *Area:* 705,769 square miles. *Population* (est. 1936): 4,360,020. *Capital:* Urumchi (Tihwa) (50,000). *Governor:* Gen. Chang Chih-chung. *Foreign trade:* No data available; chief exports, wool, cotton, furs, skins, sheep, cattle and horses. *Agricultural crops:* wheat, corn, rice, cotton, sorghum, beans, fruit. *Minerals:* jade, gold.

Largest and most remote of China's provinces, Sinkiang experienced violent Mohammedan uprisings after 1932. The Chinese governor, Gen. Shen Shih-tsai, re-established order in 1937 with Soviet support. In 1943 Russian troops withdrew, taking with them all their economic installations. A revolt of the Turki tribes who had set up an "East Turkestan Republican Government" was ended June 8, 1946 with the signing of an agreement whereby Chinese troops were to garrison the borders but Turki regiments were to garrison Inning, Tahcheng and Chengwa.

Chinese constitute about 10 percent of the population; there are 14 other ethnic groups, mostly Turki tribes of the Sunni Moslem faith. The Mongol tribes are Buddhists. There are vast stretches of desert and arid land and the limited area under cultivation is mostly in oases and river valleys. The northern slopes of the Tien-shan Range, which divides the province from east to west, provide rich summer grazing lands. There were (1942) 12,000,000 sheep, 2,000,000 horses, 1,300,000 goats, 1,300,000 cattle and 500,000 camels. Almost all of the limited foreign trade is conducted with Russia. Some caravan trade is carried on over the high passes which separate Sinkiang from India. There are no railroads, but 2,440 miles of road were built during 1932-42. An air route from Chungking to Moscow crosses the provinces with stops at Urumchi and Hami. The largest towns are Kashgar (80,000) and Yarkand (75,000), both near the western border.

Colombia (Republic)

(La República de Colombia)

Area: 439,714 square miles.

Population (est. 1946): 9,882,860.

Density per square mile: 22.4.

President: Mariano Ospina Perez.

Principal cities (census 1942): Bogotá, 395,300 (capital); Medellín, 198,100 (mining); Barranquilla, 183,500 (chief port); Cali, 121,300 (coffee, mining).

Monetary unit: Peso.

Racial stock: Mestizo, 68%; White, 20%; Indian, 7%; Negro, 5%.

Language: Spanish.

Religion: Roman Catholic.

Colombia, nearly nine times the size of New York State and the fourth largest of South American nations, is second only to Brazil in world coffee production and is the only country on its continent with frontage both on the Pacific and the Caribbean. Its northern coast was one of the first parts of the Americas to be visited by the Spanish explorers. Darien, the first permanent European settlement in the New World, was founded in 1510; Santa Marta, in 1525; and Bogotá, in 1538. New Granada, as Colombia was called until 1861, was comparatively neglected during the Spanish colonial era. After winning independence from Spain in a fourteen-year struggle ending in 1824, the country set up as a republic in 1831, including the area that now is Panama. Intermittent civil war bedeviled Colombia from then until 1903 when Panama seceded with United States backing. Since then, there have been no serious revolutions. The 100-year-old boundary dispute with Peru over Leticia almost led to war in 1931, but a settlement was arranged through the League of Nations.

The administration of Dr. Alfonso Lopez Pumarejo, Liberal president in 1934-38, produced labor reforms and the removal of state protection for the Roman Catholic Church. After an intervening Conservative regime, Dr. Lopez won again in 1942 but resigned on Aug. 7, 1945, ostensibly because of Liberal Party dissension. The provisional president, Alberto Lleras Camargo, was another Liberal, but when another Liberal split arose in the elections of May 5, 1946, Mariano Ospina Perez, a Conservative, won. The Congress remained Liberal, however.

Colombia's president, who appoints his own cabinet, is elected every four years. The Senate—the upper house of Congress—is elected for four years by the local assemblies of Colombia's fourteen departments. The House of Representatives is directly elected for two years. The president names the departmental governors and the officials of the four intendencias and six commissaries. All male citizens

over twenty-one have the vote. The judicial power is vested in the twelve-member Supreme Court in Bogota, and there is a Superior Court in each judicial district.

A term of military service is compulsory for men between twenty-one and thirty. Colombia's army in 1940 had 14,700 men, an air force of 1,150 and total army reserves of 100,000. With 1,500 personnel, the navy has two modern destroyers, three sea-going gunboats, three patrol craft, four river gunboats and several motor launches. U. S. lend-lease military goods received in 1942-45 totaled \$6,566,951, including 113 planes, and various weapons and vehicles. Under a 1946 arrangement, fifty young Colombian officers were sent to the United States for air training.

Primary education is free but not compulsory in Colombia, whose last published illiteracy figure was 48.5 percent in 1928. By law 10 percent of the national budget goes for education. The 1943-44 school enrollment was 296,901, including 138,012 in 1,986 elementary schools and 44,594 in 327 high schools. Aside from the National University, founded at Bogotá in 1572, there are four departmental universities and several private ones.

Because of the former isolation of the interior, the language and manners in Bogotá are more purely Castilian than anywhere else in South America. While the white race retains its social and economic dominance over Indians and Negroes, race mixture is steadily reducing its numbers. In 1938 there were 34,322 foreigners in Colombia. In recent years, notably by the new labor code of 1944, laboring classes have made important gains including minimum wages, vacations and holidays, accident and sickness benefits, and the protected right of union organization.

Most of the people live by farming and cattle herding, but only a small part of the land is cultivated, and that by primitive means. Colombia's coffee, by far its principal crop, is a mild variety that does not compete with Brazilian types. Production in 1945-46 was 5,365,000 bags of 132 pounds each. Other crops include bananas, coconuts, tobacco, sugar cane, corn, cotton, cocoa, beans, rice, tropical fruits and, in the temperate regions on plateaus and in mountain valleys, cereals and potatoes. Cattle in 1945 were estimated at 12,334,000 head, and some enterprising herdsmen were flying purebreds from the United States to improve their stock.

In 1941, textiles, tobacco products, beverages and other output of Colombia's 1,569 factories totaled more than 225 million pesos. To protect trade balances, exports and imports are state-controlled. Imports in 1943 were 146,692,018 pesos

against exports of 218,526,880 pesos. Coffee accounted for 80 percent of export value, followed by oil, platinum and gold. The United States took 84 percent of exports and Canada, 5 percent. Import sources by percentage were: United States, 61; Brazil, 10; Argentina, 9; and Britain, 5.

Difficult terrain makes Colombia's rail and road building costly. Rail mileage, including many short feeder lines, was put at 2,046 in 1945; and highway mileage, at 42,700, about 16 percent improved. Air transit, however, is well advanced with seven lines serving the country in 1945 and there was tri-weekly service to the United States. In a normal year, two million tons of freight are carried on the Magdalena River, navigable for 854 miles and entering the Caribbean at Barranquilla, the chief port. Other rivers are navigable for a total of 4,500 miles.

Colombia's proposed 1946 budget was 174,000,000 pesos and the national debt in August of 1945 came to 360,379,113 pesos. British investments in 1944 were £7,714,689, and U. S. direct investments in 1940 were \$111,616,000.

Colombia has a 1,200 mile coast line and a climate ranging from tropical in the lowlands to temperate in higher altitudes. Through its western half, three great Andes ranges run north and south, merging to one range at the Ecuadorean border. Its eastern half is a low, jungle-covered plain, drained by spurs of the Amazon and Orinoco and inhabited mostly by uncivilized Indians.

Colombia's mountain ranges—the fertile plateau and valley of the eastern one is the most densely populated part of the country—have many, lofty, snow-capped peaks, including Mt. Huila, 18,700 feet, and Tolima, 18,438 feet.

Rich in minerals, Colombia has an oil industry surpassed in Latin America only by Mexico and Venezuela. The country is high in platinum and has world-famous emerald mines at Muzo in the eastern Andes. Mineral production in 1944 included 22,648,000 barrels of oil, 33,304 troy ounces of platinum, 554,000 ounces of gold and 200,000 ounces of silver.

Colombian forests, about 150 million acres covering a large part of the country from the western Andes to the eastern plain, are a great but little exploited source of wealth. Products include vanilla, quinine, ipecac, sarsaparilla, gums and balsams, tanning agents, dyewoods, hardwoods, vegetable ivory and rubber. Recent attempts have been made to develop wild rubber production in the southeastern jungles, some of them never explored by white men. Colombia also has a flourishing orchid business, stimulated by swift plane deliveries to other countries.

Alligators along many of the large rivers.

are hunted for hides. The rivers and lakes abound with fish and turtles, a source of commercial tortoise shell.

Costa Rica (Republic)

(República de Costa Rica)

Area: 19,238 square miles.

Population (est. 1944): 725,149.

Density per square mile: 37.6.

President: Teodoro Picado Michalski.

Principal city (est. 1914): San José, 77,182 (capital and only large city).

Monetary unit: Colón.

Racial stock (est. 1939): White (including Mestizo), 97%; Negro, 2%; Indian, 1%.

Language: Spanish.

Religion: Roman Catholic.

Costa Rica, discovered and probably named by Columbus in 1502, is distinguished in modern times as the most orderly and democratic of all the central American nations. A Spanish province from 1530, it joined the Central American Union in 1821 and became independent in 1839. Aside from boundary disputes with Panama and Nicaragua, Costa Rica's life has been comparatively tranquil. President Alfredo Gonzales was forced from office by a coup d'état in 1917, and his successor, Federico Pinoco, was overthrown in 1919, but since then Costa Rican internal affairs have been smooth.

The president is elected popularly for four years, and is eligible for further service after one term has intervened. The one-house Constitutional Congress of forty-four members is elected for four years. Nine ministers named by the president make up the cabinet, and each of the seven provinces has a presidentially-appointed governor. Military service is voluntary. There is an army of 500 men, a police force of 1,000 men, and 700 coast guards. In 1941-45, Costa Rica received U. S. military lend-lease goods worth \$139,000.

Costa Rica's illiteracy rate of less than 25 percent is the lowest in Central America, with elementary education free and compulsory. In 1941, a total of 761 primary schools had enrollment of 73,217; forty-nine intermediate schools, 7,251; and the national university in San José, 820.

Coffee, bananas and cacao are the basic products of Costa Rican agriculture, which is marked by the prevalence of small land holdings. Cotton, sugar cane, tobacco, corn, beans, rice and potatoes are subsidiary crops. Cattle are raised mainly for dairying, and manufacturing is virtually limited to locally-consumed products.

Coffee represents 65 percent of the country's export trade, about two-thirds of which goes to the United States. Bananas

are 15 percent of exports, cacao, 8 percent. Principal imports are cotton, oil, machinery, rail equipment, autos, and iron products. In the first half of 1945, imports amounted to \$12,371,268, with exports at \$7,078,106. The rail system totaled approximately 450 miles in 1942, with 771 miles of improved highway. Pan-American Airways serves the country, and there are local inter-city lines. Of fifteen radio stations, twelve are government-owned.

In recent years Costa Rican expenditures have exceeded revenues and the general government financial position is unfavorable. In 1944 the public debt totaled 206,796,550 colons.

Most of fertile Costa Rica is elevated tableland, 3,000 to 6,000 feet high, with sharp slopes to the Caribbean and Pacific. Tropical in the coastal lowlands, the climate is cool and healthful inland, with abundant but not excessive rainfall. Canal plans developed for the San Juan River, on the Costa Rican-Nicaraguan border, would give both countries a clear waterway from the Caribbean to the Pacific.

Gold—1943 exports totaled \$200,703—is the most valuable mineral, though silver, manganese, mercury and sulphur also exist. Oil indications have been found in the south. The mountain slopes yield such forest products as balsa, cedar, dyewood, mahogany and rosewood. Lumber exports in 1944, mostly balsa, came to 1,795 metric tons. The fisheries along the coast are valuable.

Cuba (Republic)

(República de Cuba)

Area: 44,164 square miles.

Population (census 1943): 4,788,624.

Density per square mile: 108.2.

President: Dr. Ramon Grau San Martin.

Principal cities (census 1943): Habana, 659,883 (capital, industrial center); Marianao, 120,163 (suburb of Habana); Santiago de Cuba, 118,266 (seaport, mining); Camaguey, 80,509 (cattle, sugar); Matanzas, 54,844 (seaport, sugar).

Monetary unit: Peso.

Racial stock (1944): White and Mulatto, 75%; Negro, 24%; Mongoloid, 1%.

Language: Spanish.

Religion: Roman Catholic.

Cuba, the largest of the many islands between North and South America, puts its paramount interest in the price of sugar. It is the second largest cane sugar producer in the world, and sugar and sugar products comprise more than 80 percent of its exports.

Its long history, often afflicted with strife and revolution, began for white men with discovery by Columbus on his first voyage in 1492. It was a Spanish colony until 1898, except for brief British occupancy in 1762-

23. Open war raged between the colonists and Spanish troops from 1867 to 1878. Fighting broke out again in 1895 and, at the end of the Spanish-American War which started in 1898, Spain gave up Cuba. Until creation of the Cuban republic in 1902, the island was ruled by the United States. For the first thirty-two years of the republic's life, the United States held the right to intervene in any crisis—a right which was invoked during insurrections in 1906 and 1917.

Corruption bedeviled Cuba after World War I, particularly during the eight-year presidency of Gerardo Machado who was ousted in a 1933 revolution. Five different residents tried to rule in the next few months and out of this came the dictatorship of Fulgencio Batista who climbed almost overnight from army sergeant to army commander-in-chief. In 1940 Batista legalized his reign by being elected to a four-year presidential term. He was succeeded in 1944 by Dr. Ramon Grau San Martin, backed by the Republicans and his own Autentico Party. Batista forces kept control of Congress until 1946 when Grau, with socialistic and pro-labor program, won dominance in the House of Representatives.

Cuba's president is elected by direct popular vote, in which women take part. The cabinet, though named by the president, is responsible to the Congress—a 54-member Senate and a 125-member House, both elected for four years. Much Cuban lawmaking is done through presidential decree, reviewable by the Supreme Court. The six provinces and 119 municipalities have locally-elected administrations. Each province has a court of appeals, and local civil, municipal and criminal courts.

Compulsory military service was established in 1942. The army numbers about 10,000; the navy, 2,700 manning some twenty small coastal craft. Two U. S. air bases and one naval base built in World War II at a cost of more than \$30,000,000 were turned over to Cuba in May of 1946. However, the United States retained its long-held naval base at Guantanamo.

About 20 percent of the 1944 national budget was spent on education which is free and compulsory from seven to fourteen. In 1942 there were 5,377 primary schools with enrollment of about 500,000; 1,200 secondary schools with 18,664 students; 100 arts and craft schools; and the National University in Havana had attendance of 13,949. Recent social legislation has effected a 44-hour week, a month's vacation for each eleven months worked, and compulsory maternity and accident insurance. The proportion of unionized workers is the highest in Latin America.

Half of the employed are in agriculture which accounts for over 90 percent of exports. Often jolted by fluctuation of the price of sugar, of which it produced 3,924,-

240 short tons in 1945, Cuba is now seeking to vary its crops. Other important ones are tobacco—65,700,000 lbs. in 1943-44; coffee—57,835,140 lbs. in 1944-45; cacao—4,000,000 lbs. estimated in 1944-45; and fruits, vegetables, henequen, corn and beans. The livestock and dairy industry has progressed greatly in the last fifteen years.

Leading manufactured products include sugar, molasses, syrup, brandy, rum, alcohol, cigars, cigarettes, cigar boxes, sponges, cement, cordage, salt, dressed hides, dairy products and canned goods.

Exports in 1944 totaled \$427,058,296, and the year before, \$350,622,767. Imports in 1944 came to \$208,643,434, and \$177,436,346 the year before. In value, sugar accounted for about 80 percent of exports, and tobacco, 8 percent. The United States handles 80 percent of Cuban trade; Britain, about 13 percent.

Railway mileage in 1944 was estimated at 3,850 miles, plus 3,000 miles of private lines on sugar estates. In 1942 there were 2,390 miles of improved highway, and about 2,000 miles of unimproved roads. Cuba has 118 radio stations, more than 250,000 radio sets, and 78,000 telephones. Air service is maintained by Pan American and the Royal Dutch Airlines, while domestic lines are operated by the Cuban National Aviation Company, a Pan American subsidiary.

Cuba's 1946-47 budget is estimated to balance at 173,382,000 pesos. At the start of 1943 the consolidated public debt was 118,416,000 pesos plus a floating debt estimated at from 50,000,000 to 90,000,000 pesos. American direct investments in 1940 totaled \$559,797,000. Banking is handled by 169 banks and branches, mostly American and Canadian; there is no central bank.

Long, skinny Cuba has maximum dimensions of 730 by 160 miles, and approximately the area of Pennsylvania. It has mountainous areas in the southeast, central and west but the rest is flat or rolling. The coastline of more than 2,000 miles is indented by numerous deep harbors. Cuba's numerous short rivers are of slight importance commercially. The tempering influence of the trade winds on the island's tropical climate make Havana's average temperature 77 degrees. Nowhere is rainfall deficient. Vegetation, growing from alluvial soil in tropic heat and humidity, is rich and varied.

Rich mineral beds, mostly in the eastern province of Oriente, include iron, copper, manganese, chromium and nickel. Iron ore reserves, estimated at 3,500,000 tons, are 90 percent held by U. S. steel interests. Virtually all mineral exports go to the United States, and during the war the United States spent about \$35,000,000 developing a jungle peninsula in eastern Cuba into one of the world's greatest nickel producing centers.

In 1940 Cuba had an estimated 3,500,000 acres of wooded land, with valuable cabinet woods such as cedar and mahogany, and also fibers, resins and oils. Cedar is used locally for cigar boxes, and mahogany is exported. Lobsters, oysters, crabs and shrimp are major sea food products.

Czechoslovakia (Republic)

(Československa Republika)

*Area: 49,321 square miles.

*Population (census 1930): 14,001,200.

Density per square mile: 283.9.

President: Eduard Beneš.

Premier: Klement Gottwald.

Principal cities (census of 1930): Praha (Prague), 848,823 (capital, industrial center); Brno (Brünn), 264,925 (textiles); Moravská Ostrava, 125,347 (iron and steel); Bratislava, 123,844 (Danube port); Plzeň (Pilsen), 114,704 (Skoda steel works).

Monetary unit: Koruna.

*Racial stock (census 1930): Czechoslovak, 69.4%; German, 23.6%; Magyar, 5%; Ruthenian, .7%; Polish, .6%.

Languages: See Racial Stock.

Religions (1930): Roman Catholic, 73.54%; Protestant, 7.67%; Czechoslovak Church, 5.39%; Greek Catholic, 3.97%; Jewish, .7%.

*Excluding Ruthenia.

Born as a nation out of World War I, Czechoslovakia was among the first to be hit by the German aggression that led to World War II. The country, about the size of Louisiana, was wiped off the map by appeasement and partition in 1938 and at its rebirth in 1945, Czechoslovakia was well under the shadow of Russia, with Communists strong in the government and a form of communism spreading steadily over the land.

It was in the 5th century, A.D., that the Czechs and Slovaks settled in the region they still occupy. Slovakia passed under Magyar domination, but the Czechs founded the Kingdom of Bohemia, which was among the most powerful in Europe for centuries. German encroachment began in the 14th century, was furthered by the election in 1526 of a Hapsburg as Bohemian king. After the Czechs rebelled in 1618 and were defeated at the Battle of White Mountain in 1620, they were ruled for the next 300 years by the Hapsburgs as part of the Austro-Hungarian Empire. In World War I, Czech patriots, notably Thomas G. Masaryk, went abroad to promote sympathy for Czech independence, while Czech legions built around captured prisoners of war fought against the Central Powers. On Nov. 14, 1918, Czechoslovakia proclaimed itself a republic with Masaryk as first president, and its independence was recognized on Sept. 10, 1919, by the Treaty of St. Germain.

Between World Wars I and II, Czechoslovakia supported the League of Nations, formed the Little Entente with Yugoslavia and Rumania, and cooperated closely with France. President Masaryk resigned in 1935, two years before his death at the age of eighty-seven, and was succeeded by Dr. Eduard Benes.

Meanwhile, the German plan of aggression was under way. Czechoslovakia's German minority, led by Konrad Henlein, began demanding autonomy. The government granted many concessions which, of course, were not enough to suit the Germans. Adolf Hitler, in an effort to justify himself, accused the Czechs of mistreating the German minority and lined up Nazi troops across the border.

The beginning of the end came at the infamous Munich conference on Sept. 30, 1938, when France and Britain agreed that the Nazis could take the Czech Sudetenland on the German border. Dr. Benes resigned on Oct. 5 and Czechoslovakia became a federal union in the German orbit. The Poles, in the meantime, had grabbed Czechoslovakia's Teschen area, and Hungary had taken areas in Slovakia and Ruthenia. In March, 1939, the Nazis set up Slovakia as a puppet state, declared Bohemia and Moravia to be Nazi protectorates, and gave Hungary the balance of Ruthenia. Both Slovakia and Bohemia-Moravia were occupied by German troops.

Czechoslovakia suffered cruelly under Nazi occupation. By sabotage and slow-downs, the Czech patriots and workers hindered the Germans and finally on May 27, 1943, near Prague, the brutal German administrator, Reinhard Heydrich, was fatally wounded. The Nazis responded savagely. Lidice, a nearby village, was destroyed completely, and all its men were shot. Soon after, the Germans also destroyed the village of Lezaky and killed all its adult population. Hundreds of other Czechs were executed in reprisal for the Heydrich killing.

Meantime, Dr. Benes organized a government-in-exile in London with Jan Sramek as premier. It was recognized by France, Britain and the United States. On Dec. 12, 1943, the exiled regime signed a treaty and mutual assistance pact with Russia. Soon after the government returned to Czechoslovakia in February of 1945, Ruthenia was ceded to Russia.

The constituent assembly elected in May 1946, was assigned to draft a new constitution to replace that of 1920 under which the country elected every seven years a president and a two-house parliament—a 150-member Senate and a 300-member Chamber of Deputies.

Czechoslovakia has become a member of the U.S.S.R. sphere of influence in economic life by treaty arrangement.

CONSTITUENT ASSEMBLY

Party	Seats
Bohemia-Moravia	
Communists	93
National Socialist	55
Christian Democrat	46
Social Democrat	37
Total	231
Slovakia	
Christian Democrat	43
Communist	21
Freedom	3
Labor	2
Total	69

On July 3, 1946, Communist Premier Klement Gottwald formed a twenty-six-member coalition cabinet in which Communists held nine places, with representation also going to the National Socialists, Slovak Democrats, Czech Christian Democrats and Social Democrats.

For administration, the country is divided into three provinces—Bohemia, Slovakia, and Moravia-Silesia.

The Czech army, with 205,000 regulars and 1,685,000 reserves, was regarded in 1938 as one of the best trained and equipped forces in the world. On March 16, 1939, the Germans declared it to be out of existence. The new Czech army, based on a cadre of Czech units which fought with the Red Army, is being trained and equipped by the Soviet Union with organization and armament patterned on the Russian design. Its estimated strength is 140,000. Soviet and U. S. occupation troops withdrew from Czechoslovakia in 1945.

Illiteracy is extremely low in Bohemia, higher in Slovakia. Elementary and higher grade schools (excluding Ruthenia) totaled 16,808 in 1937 with 2,032,873 pupils; 380 secondary schools had 154,768 pupils; while 4 universities—Prague, Czech (founded 1348); Prague, German; Brno, Czech; and Bratislava, Slovak—had 23,472 students.

One of the country's greatest problems is the ethnic variety of its population. Before Munich, however, these difficulties had been gradually overcome by a strict application of its democratic constitution, by providing all the minorities with schools and cultural institutions in their own languages, and by drawing minorities into active participation in the government. In view of the traitorous part played by German and Hungarian minorities in the disintegration of Czechoslovakia, the Government has decided to remove them from the country.

Economic nationalization is progressing rapidly. Decrees issued Oct. 24, 1945 ordered nationalization of nearly all industrial corporations with more than 500 employees.

All national resources, public utilities, transport, commercial banks, and insurance companies became state property. Redistribution of large estates had already been accomplished following World War I by the 1919 Land Reform Law which made it illegal for one person to own more than 350 acres of arable land. The social insurance system covers accident, sickness, disability, old age and death.

According to the last census, 34.64 percent of the population was engaged in agriculture, 34.94 percent in industry, 7.94 percent in commerce, 5.53 percent in transportation and 4.86 percent in public service and the professions. In 1937 about 42 percent (14,457,705 acres) of the total area was arable, 32.65 percent, forest; and 16.59 percent meadows and pastures. Sugar beets, corn (1938: 403,001 tons), wheat (1938: 1,199,793 tons) and high-grade barley (1938: 1,464,516 tons), and hops for beer-brewing are cultivated in low-lying areas. In more elevated regions cultivation of potatoes (1938: 10,834,617 tons), rye (1938: 2,101,094 tons) and oats (1938: 1,532,748 tons) predominates. Higher lands are used for growing fodder crops or for grazing. Livestock in 1938 included 4,938,133 cattle, 3,612,166 swine, 1,114,310 goats, and 43,981,767 poultry. Agricultural production (1945) was reported close to prewar levels, although the livestock population was seriously reduced.

Czech industry's highly developed position is important to foreign trade, since production far exceeds domestic needs. Agricultural products provide raw materials for important industries, led by the sugar industry whose 119 factories produced 572,746 metric tons of sugar in 1936. The beer industry has attained world-wide repute; 403 breweries produced more than 200,000,000 gallons of beer in 1935. There are also spirit, malt and foodstuffs industries. Abundance of coal and presence of iron ore give the country a big metallurgical industry. Output of pig iron in 1937 was 1,675,064 metric tons and, of raw steel, 2,317,634 tons. The Skoda steel works (Plzen) are one of the largest in Europe. Other industries are glass, porcelain, and pottery making, while large forest areas provide raw material for the timber, paper and cellulose industries. Also highly developed are the textile industries, including cotton, wool, flax and jute production, and the shoe industry. The famous Bat'a shoe factories are at Zlin.

Last foreign trade figures (Jan.-July 1938) showed exports of \$355,096,000 and imports of \$290,880,000. By percentage the principal customers were Germany 9.6, Britain 5.9, United States 4.5, Yugoslavia 4.2, Rumania 2.9, the chief suppliers, by percentage, were: Germany 10.3, United States 6.3, Rumania 3.5, Britain 3.4 and France 3. Manufactures, especially iron

and steel, textiles and glassware, accounted for 73.6 percent of the exports, followed by raw materials 18.5 percent; and foodstuffs 7.5 percent. Raw materials comprised 50.8 percent of the imports followed by manufactures 31.6 percent; and foodstuffs 15.7 percent.

The disadvantages of Czechoslovakia's landlocked position which places her at the mercy of her neighbors is offset somewhat by a well-developed system of internal communications. Czech railroads, totaling 8,650 miles in 1938, form a direct connection between the systems of eastern and western Europe, making the country an important communications center. Highway mileage (1939) totaled 43,718.

Internal waterways ran 255 miles in 1938, with 105 on the Danube connecting Czechoslovakia with the Black Sea; and 126 on the Elbe and Vltava, linking Bohemia with the North Sea. Danube traffic in 1935 came to 627,326 tons; the Elbe and Vltava carried 2,775,591 tons in 1938.

Government revenues in 1939 were \$322,-914,592; expenditures, \$344,127,116. The national debt was \$2,296,080,000.

A long and narrow country, 594 miles from east to west and with a width varying from 45 to 175 miles, Czechoslovakia lies athwart the great central European watershed between the Baltic, Black and North Seas. Mountains make several of its boundaries—the Carpathians by Poland on the northeast, the Bohmerwald by Austria on the southwest, and the Erze and Riesen range by Germany on the northwest. Many of the valleys are made fertile by the Danube, Elbe and Vltava and their tributaries. At Prague, in Bohemia, 650 feet elevation, the average annual temperature is 48.2 degrees, and the average annual rainfall is 19.6 inches. The corresponding figures for Presov, in eastern Slovakia, 850 feet elevation, are 46.8 and 25.6. Heavy winter snowfall is common in the highlands. Navigation on the Elbe and Danube is usually stopped by ice for six to eight weeks each year.

Most important of Czechoslovakia's varied minerals are pit coal and lignite, with the principal coal fields in the Ostrova-Karvinna area, and connected with the Polish fields of Upper Silesia. Production in 1938 was 17,416,340 tons of hard coal and 16,222,549 tons of lignite. Other 1938 mineral outputs were: antimony, 1,763,680 pounds; gold, 10,000 ounces; magnesite, 83,350 tons; oil, 6,504 tons; silver, 1,190,326 ounces; and zinc, 6,504 tons.

The 1942 estimated production of iron ore was 1,040,000 metric tons but much ore is imported to meet the demands of Czechoslovakia's normally-booming iron and steel industry. Excellent porcelain raw materials, particularly kaolin, are obtained

in western Bohemia and southern Moravia for an annual yield of about 400,000 tons.

Czechoslovakia is one-third forested and is one of Europe's richest forest lands. Lumber production in 1936 came to 52,-852,826 board feet.

Denmark (Kingdom)

(Kongeriget Danmark)

Area: 16,575 square miles.

Population (est. 1943): 3,949,000.

Density per square mile: 238.2.

Sovereign: King Christian X.

Prime Minister: Knud Kristensen.

Principal cities (est. 1940): Copenhagen (Köbenhavn), 700,465 (capital); Aarhus, 99,881 (shipping, commercial center); Odense, 87,521 (meat, dairy exports); Aalborg, 55,652 (seaport).

Monetary unit: Krone.

Racial Stock: Almost entirely Danish.

Language: Danish.

Religion: Evangelical Lutheran (state).

Denmark—one peninsula and 500 islands in the Baltic Sea—is a vast produce farm half the size of Indiana. Because of its rich production of meat, butter and eggs, it suffered almost no material damage from German occupation in World War II. Needing the Danish food, the Nazis permitted the Danish farmers to keep right on producing and when the war was over and much of Europe was a starving ruin, Denmark emerged as a comparative land of plenty.

A tiny nation today, Denmark once was powerful and feared. After a German monk named Ansgar converted the Danes to Christianity in A. D. 826, the islands and the mainland were united in the 10th century. The sovereign, Canute the Great, conquered England in 1015. In the 12th and 13th centuries under Kings Waldemar I and II, Denmark hit its peak. Under the terms of the Kalmar Union in 1397, it combined with Norway and Sweden. Sweden broke away in 1523. In the Napoleonic War Denmark picked the wrong side and when Napoleon was beaten, Norway was given to Sweden and Heligoland to Britain in 1814. Denmark lost again in 1864 when, after war with Austria and Prussia, Holstein, Schleswig and Lauenburg were ceded to Prussia.

The country, which had become a liberal constitutional monarchy in 1849, stayed neutral in World War I, after which a plebiscite returned to it a part of North Schleswig. In 1917 Denmark sold the Virgin Islands to the United States for \$25,000,000.

The Social Democrats, moderately socialist, dominated Danish politics in 1926 and 1929-40 in an era marked by acti-

participation in the League of Nations and close harmony with Norway and Sweden.

On May 31, 1939, eager for peace, Denmark signed a ten-year non-aggression pact with Germany. On April 9, 1940, seven months after World War II began, Germany invaded neutral Denmark. The British countered by occupying the Faroe Islands and also Iceland, which responded by declaring its complete independence from Denmark in 1944.

To save the country from destruction King Christian accepted the German occupation and the Danish policy became one of passive resistance against Hitler's attempts to form a "model protectorate." Underground workers led by the Danish Freedom council were active throughout the occupation, intensifying their efforts after the Normandy invasion. A total of 930 major acts of anti-Nazi sabotage was recorded in 1944 and 680 up to April, 1945. The cabinet and Rigsdag were considered suspended after Aug. 29, 1943 when the Danes refused to accede to German demands that saboteurs be tried in German courts. Following the German surrender the Danes quickly took over their government again with Social Democrat Vilhelm Buhl replacing Radical Erik Scavenius as premier on May 4, 1945. Buhl resigned when his Social Democrat party lost ground in the national elections of Oct. 30, 1945, and the King designated Liberal leader Knud Kristensen to form a new cabinet on Nov. 7, 1945.

Denmark's honored king, Christian X, of the house of Schleswig-Holstein-Sonderburg-Glücksburg, a soldier and sportsman who stands six feet six inches in height, succeeded to the throne on May 14, 1912. The king, who stoutly opposed excessive German demands throughout the Nazi occupation in World War II, was born on Sept. 26, 1870. He married Princess Alexandrine of Mecklenburg in 1898. They had two sons: Crown Prince Frederick, born March 11, 1899, who married Princess Ingrid of Sweden in 1935 and Prince Knud, born in 1900, who married Princess Caroline Mathilde of Denmark, his first cousin, in 1933. King Christian's brother, Prince Carl, was elected King of Norway in November of 1905 under the title, Haakon VII.

In its government, under the constitutional act of 1915, amended in 1920, Denmark is a constitutional hereditary monarchy with succession in the male line. Legislative authority rests jointly with the king and the two-house parliament—the Rigsdag. The 146-member Folketing, the lower house, is popularly elected every four years but can be dissolved by the king at will. Members of the Landsting, the upper house, are elected for eight years—fifty-six of them by popular vote and nineteen

by the outgoing Landsting. The cabinet, Statsraadet, presided over by the king who designates the premier, is the highest executive power, dealing with all new bills and important measures.

There are twenty-one counties, each under a governor. Copenhagen, the capital, is a separate district with its own administration. Local government is largely in the hands of local councils.

There is a supreme court (Højesteret) of 13 judges at Copenhagen; and two superior courts (Landesretterne) which handle serious offenses and also act as courts of appeal from the 99 lower courts.

For defense, military service is compulsory. Both army and navy are under the Ministry of Defense; the king is the supreme head of the armed forces. The army, 11,000 regulars and 89,000 reserves in 1939, was disarmed and disbanded by the Germans in 1943 but is being re-formed and re-equipped with British assistance. The navy on Dec. 31, 1945 had 2 frigates, 2 corvettes, 7 torpedo boats, and an assortment of smaller craft, many of them badly damaged by the wholesale scuttling which took place in 1943. Coast-defense forces are under naval jurisdiction.

Under the Danish system schooling is compulsory from 7 to 14 and, for the most part, free. However, in 1937, out of 4,498 lower schools, only 34 were government institutions; 3,899 were maintained locally, and 565 were private. The famous popular high schools (folkehøjskoler) for adult education number about 60, all private but assisted by the state. The royal university of Copenhagen, founded in 1479, has about 5,200 students and that of Aarhus, founded in 1928, about 500. Elementary schools in 1940 had 407,355 students; middle and secondary schools, 67,064.

Almost the entire population belongs to the Lutheran Church which is the established religion of the state, but there is complete religious toleration. The density of population on the islands is nearly twice that of the peninsula. Average annual birth rate, 1936-38, was 18.0 and the average annual death rate, 10.7.

Social legislation is well advanced and provides for medical aid, poor relief, child welfare, and workmen's compensation. The National Insurance Act requires everyone from 21 to 60 to belong to an approved sickness benefit society to which the state also contributes. The cooperative movement is also well organized.

In Denmark, ninety percent of the land is productive and 77 percent is actually farmed (7,939,000 acres). Agrarian reform laws have operated to bring about a large number of small holdings; of the 204,231 farms (1938) 41.2 percent were from 25 to 75 acres and only 2.8 percent of more than 575 acres. About two-fifths of the culti-

vated area is devoted to cereals, led by barley (1943 output: 1,399,221 tons), mixed grain (1943: 959,001 tons), oats (1943: 1,146,392 tons), rye and wheat. Production of root crops (fodder) in 1943 was 23,038,070 tons, potatoes 2,138,462 tons, and sugar beets 1,457,113 tons. The principal source of exports and of the nation's wealth is dairy farming and the production of bacon, pork, butter and eggs. Livestock in 1943 included 2,988,000 cattle, 2,449,000 swine, 6,418,000 poultry, 1,400,000 rabbits and 599,000 horses. Both crop and dairy farming are steadily improved as scientific methods advance.

Danish industry produces primarily for home consumption, though some products, such as Diesel motors, are a large export. In 1944 there were 6,635 industrial establishments with 191,484 workers and an output valued at 4,180,291,000 kroner. The largest industries were food-processing, 1,389 with a value of 1,833,718,000 kroner; and iron and metal, 1,130 with a value of 952,677,000 kroner. Others were chemical and pharmaceutical, wood and paper, clothing, textiles, machinery, beverages, and leather.

The per capita rate of Denmark's foreign commerce is exceptionally high. Exports in 1943 totaled 1,298,100,000 kroner; imports, 1,226,100,000 kroner. Of total exports of \$321,054,000 in 1939, the last completely normal year, 52.3 percent went to Britain, 23.3 percent to Germany, 4.9 percent to Sweden, 3.5 percent to Norway and 1.9 percent to the Netherlands. Imports, valued at \$354,091,000, come principally from Britain 33 percent, Germany 27 percent, United States 7.3 percent and Sweden 7.3 percent. The leading exports were bacon 24.4 percent (all to Britain), butter 23.5 percent, eggs 9.3 percent, live animals 5.6 percent, and machinery and fish. Leading imports were coal and coke 11.2 percent, iron and steel 8.4 percent, oil cake and meal (for feed), 5.9 percent, petroleum 4.5 percent, oil seeds 3.6 percent, automobiles 4.1 percent, chemical fertilizers 3.4 percent.

Before World War II the Danish merchant marine, fourth largest in the world on a per capita basis, totaled 2,705 vessels of 1,175,000 tons or about 300 tons per capita. Wartime losses were fixed at 518,000 tons. Regular communications with foreign countries are mainly westward by sea, via Esbjerg, with England, the Netherlands, Belgium and France. There are Swedish ferry services from Copenhagen to Malmo and from Helsingör (Elsinore) to Helsingborg. The main land route to the rest of the continent is the railway via Padborg and Schleswig to Hamburg. Railway mileage totals about 3,050, nearly half nationalized. Train-ferry schedules for inter-island communication are highly organized.

Motor transport also is well advanced,

with 31,744 miles of highway in 1940. In 1943 the country had 511,622 telephones.

Revenue for 1943-44 was estimated at 718,900,000 kroner; expenditures, at 962,500,000 kroner. Failure to balance the budget was caused in part by the cost of Germany's occupation army. The 1942 public debt was 1,090,993,000 kroner. U. S. investments in Denmark in 1939 were \$103,000,000.

Interesting geographically, Denmark, only three miles from Sweden at the closest point, has 11,411 square miles on the Jutland peninsula and 5,136 square miles on its Baltic islands. The largest islands are Zealand, 2,709 square miles, the site of Copenhagen; Funen, 1,149 square miles; and far to the east, Bornholm, 228 square miles. The narrow waters to the north are called The Skagerrak; and to the east, The Kattegat.

The terrain of the whole kingdom is low but not flat. Its highest point is about 500 feet, and there are many lakes, ponds and short rivers. Sand dunes ranging from 500 feet to seven miles belt the western Jutland coast almost without a break. Denmark's climate is like that of eastern England, but with colder winters and warmer summers. The average annual temperature is 45.2 degrees (61 degrees in July, 32 in January). Average rainfall is twenty-four inches.

Mineral resources are negligible, although some coal, granite and kaolin are found on Bornholm. Peat bogs supply an important source of fuel. Forest resources are unimportant.

The fishing industry, centered at Copenhagen but carried on both in the shallow belts and fjords and in the deeper waters of the Baltic, North Sea and Skagerrak, is a basic part of the Danish economy. The 1944 catch of 165,000 tons was valued at 150,000,000 kroner. The catch usually consists largely of plaice (flatfish) followed by cod, herring, mackerel, eel and haddock. Normally, about two-thirds of the catch is exported, usually fresh, ice-packed, or live.

Outlying Territories

FAROE ISLANDS. *Status:* Administratively a county of Denmark, represented in the Rigsdag. *Area:* 540 sq. mi. *Population* (1938): 26,000. *Capital:* Thorshavn. *Government:* Danish-appointed governor and locally elected assembly. *Foreign trade* (1939): Exports, \$2,242,000; imports \$2,163,000 (38 percent of trade to Denmark). *Principal products:* Cod (salt and dried) 84 percent; whale oil 8.8 percent; other fish 2.2 percent; wool; cod liver oil, fertilizers, skins and leather.

This group of 21 islands, lying in the North Atlantic about 200 mi. NW of the Shetland Islands, joined Denmark in 1386 and has since been part of the Danish

kingdom. They were occupied by British troops during World War II. The principal pursuits are fishing and sheep grazing. The predominant *Sjálvstjrisflokkur*, or Home Rule party, heads a movement seeking autonomy. The use of the local as well as the Danish language has been authorized to some extent.

GREENLAND. *Status:* Colony. *Area:* 839,782 sq. mi. (almost 85 per cent glacier). *Population:* Natives, 17,600; Danes, 600. *Capital:* Godthaab. *Government:* Divided into two inspectorates, whose officials are responsible to the director for Greenland in Copenhagen; no self-government. *Foreign trade* (1938): Exports, \$1,894,000; imports, \$669,000. *Principal products:* Cryolite (1944: 17,562 tons), fish, hides and skins, whale and fish oil, marble.

Greenland, the world's largest island, was explored in 982 by Eric the Red. Danish sovereignty which covered only the west coast, was extended over the whole island in 1917. In 1941 the United States signed an agreement with the Danish minister in Washington, placing it under U. S. protection during World War II but maintaining Danish sovereignty. U. S. weather stations were built on the island during the war. Greenland is the only source of natural cryolite, important in manufacture of aluminum. Trade (except cryolite) is a monopoly of the Danish crown.

Dominican Republic

(República Dominicana)

Area: 19,327 square miles.

Population (estimate 1945): 1,999,276.

Density per square mile: 103.4.

President: Rafael Leonidas Trujillo Molina.

Principal cities (est. 1945): Ciudad Trujillo, 123,780 (capital; sugar); Santiago de los Caballeros, 54,113 (tobacco); San Pedro de Macoris, 22,728 (sugar port); Puerto Plata, 15,610 (seaport).

Monetary unit: Dominican peso.

Racial stock (est. 1939): Mestizo, 40%; White, 40%; Negro, 20%.

Language: Spanish.

Religion: Roman Catholic.

The Dominican Republic occupies about two-thirds of the island of Santo Domingo which Columbus named Hispaniola when he discovered it on his first voyage in 1492. (The other third is Haiti.) The capital, Ciudad Trujillo, is the oldest white settlement in the Western Hemisphere, and the country, though nominally a republic, is one of the tightest dictatorships in the world. The Dominican Republic was variously under Spanish, French and Haitian domination until it set up independently in 1865 and then plunged into a notoriously unstable political history. U. S. Marines occupied it from 1916 to 1924 when a new

constitution was adopted. Since 1930 the constitution has meant little. In that year Rafael Trujillo, an army general, was elected president. He swiftly put down all opposition and became a virtual dictator. President most of the time since 1930, Trujillo has given his country an "orderly" regime with improved irrigation, roads, sanitation and schools, but the people have a minimum of personal liberty.

The president is supposed to be elected every five years by popular vote, in which women take part, but he is eligible to be re-elected for an indefinite period. He is assisted by a cabinet of eight secretaries. The 19-member Senate and the 38-member Chamber of Deputies are elected for five years. Each of the eighteen provinces has an appointed governor. There is a 4,000-man army, a small air force and several coast patrol craft. U. S. military lend-lease aid received in 1941-45 came to \$1,140,000.

Education is free and compulsory from seven to fourteen but the illiteracy rate was about 80 percent in 1935. About 1,896 primary schools had a 1943 enrollment of 203,992; seventy-nine intermediate schools had an enrollment of 7,545. Several hundred Spanish and European families live in the Dominican Republic but the mass of the population is mulatto and Negro. Ciudad Trujillo (formerly Santo Domingo), founded in 1496, is probably the best existing example of a Spanish colonial town of the 16th century. It is surrounded by ancient walls with bastions, and has straight narrow streets and massive-walled stone houses, and there still stands the fortress in which Columbus and his brother were imprisoned in 1500 by Bobadilla.

Before World War II, Trujillo invited 100,000 European Jews and other refugees to settle in the Dominican Republic, but only about 500 accepted.

Primarily agricultural, the country produced 416,630 short tons of sugar in 1944-45; 425,000 bags of coffee, each of 132 lbs.; 3,858 short tons of tobacco; and cacao, bananas, rice, corn, cassava, beans and sweet potatoes. The raising of hogs and cattle has been expanded recently. Sugar refining, largely U. S. controlled, is the only important manufacture.

Exports, more than 70 percent sugar, came to 60,269,328 pesos in 1944, and imports, to 18,524,575 pesos. Cocoa, coffee, molasses and tobacco are other chief exports. The main imports, mostly from the United States, are cotton goods, iron and steel products, chemicals and machinery. In 1943 about 60 percent of exports went to Britain, and about 30 percent to the United States.

Transit facilities in 1944 included 163 miles of public railway, 622 miles of sugar plantation railway, 1,200 miles of improved highway and 1,168 autos. Communication facilities included 2,400 telephones, 1,034

miles of telegraph wire, and eight radio stations.

In 1943 the Dominican Republic had revenue of 20,443,000 pesos, and spent 19,249,000 pesos. The 1940 external debt was \$16,160,000, and in the same year U. S. direct investments were \$41,895,000.

Crossed from northwest to southeast by a mountain range with peak elevation over 10,000 feet, the country has fertile, well-watered land on the northeast side where nearly two-thirds of the population lives. The southwest part is arid and with poor soil except around Ciudad Trujillo. The boundary with Haiti is 193 miles long and the coast line, 1,107 miles long.

Mineral resources are limited and production, negligible. Exports in 1944 included 988 oz. in gold, 2,240 short tons of salt, and 2,366 short tons of gypsum. The more readily accessible timberland has been thoroughly exploited, producing mahogany, lignum vitae and pine. Fishing is minor, not even meeting the local demand.

Ecuador (Republic) **(República del Ecuador)**

Area: 275,936 square miles.

Population (est. 1944): 3,171,367.

Density per square mile: 11.5.

President: José María Velasco Ibarra.

Principal cities (est. 1944): Quito, 165,924 (capital); Guayaquil, 172,948 (chief port); Cuenca, 52,519 (trading center); Riobamba, 27,459 (sugar, cereals).

Monetary unit: Sucre.

Racial stock (est. 1938): Mestizo, 54%; Indians, 27%; White, 8%; Mulatto, 6%; Negro, 2%; Others, 3%.

Language: Spanish.

Religion: Roman Catholic.

Third smallest of the South American nations, mostly forested and mountainous and a little larger than Texas, Ecuador has a long history bristling with the forceful rule of dictators. The Spanish under Francisco Pizarro conquered the land in 1532 by defeating the Inca Atahualpa, and two years later they founded Quito. The first revolt against Spain occurred in 1809 but the victory was not complete until the Battle of Pinchincha on May 24, 1822. Ecuador then joined Venezuela and Colombia in a confederacy founded by Bolivar and known as Colombia, but withdrew amicably and became independent on May 13, 1830. The country's subsequent history has been largely one of dictatorships, notably under Juan José Flores, Gabriele Garcia Moreno, and Elcy Alfaro. Since 1900 a regime has fallen, usually by force, on the average of every two years. Shortly before the 1944 elections, President Carlos Arroyo del Rio was forced to resign, and he was replaced by Velasco Ibarra, recalled from

exile in Argentina. Ibarra, confirmed in office by the voters later in the same year, followed the old pattern by assuming the dictator role in 1946 and suppressing opposition, sometimes with the use of U. S. lend-lease military equipment. Ibarra irked the United States in 1944 by recognizing the Perón regime in Argentina.

For more than one hundred years, Ecuador fought with Peru, frequently using guns, over the rich chacras border area as big as New Mexico. After hostilities started again in 1941, both nations submitted to mediation and when the decision was made final in 1944, Ecuador lost most of the disputed area.

Under a 1945 constitution, Ecuador elects a president for four years by direct vote, and he is ineligible for further service until at least one term intervenes. The congress is unicameral. Supreme Court justices, heading the judiciary, are elected by the congress. There are seventeen provinces and one territory, the Galápagos Islands, 600 miles off the coast. Military service is compulsory at eighteen with an army of 7,000 and 40,000 reserves. A 1,030-ton training ship and several smaller craft make up the navy. Ecuador has an aviation school at Guayaquil and a naval school at Salinas. For Panama Canal defense, the United States built a Galápagos base in World War II and this reverted to Ecuador in July, 1946. Ecuador's U. S. lend-lease military receipts totaled about \$6,000,000, including thirty tanks and fifty planes.

Education is free, compulsory and under state control but illiteracy is very high—an estimated 62 percent in 1945. School enrollment in 1944 was put at less than 300,000 in about 2,700 primary and forty secondary schools. Ecuador has universities at Quito, Guayaquil and Cuenca. Although Catholicism dominates, there is complete religious freedom. The country's proportion of Indian population is high.

Although agriculture is the basis of Ecuador's economy, less than 12,000,000 acres are devoted to it. Cacao, the chief crop, 39,400 metric tons in 1943—is grown in the coastal regions and lower river valleys, along with coffee, bananas, rice, sugar cane, tobacco and cotton. The plateaus and mountain valleys are used for grazing and dairying, and raising cereals and potatoes. Ecuador's main manufactured product is the Panama hat, made of Toquilla straw. 1940 exports ran to more than \$1,000,000.

Total imports in 1944 were valued at \$23,500,000, of which 52% were supplied by the United States; total exports were valued at \$33,100,000, of which 57% went to the United States. Chief imports, in order of value, were cotton and manufactures, food stuffs and chemicals, and drugs; chief exports were rice, straw hats, cacao beans, rubber, coffee and balsa wood. Petroleum exports in 1945 amounted to 279,278 metri-

tons of which 60% went to Canada, 21% to Argentina, and 18% to Uruguay.

Railway mileage in 1945 was 765, all nationalized. The principal road connects the chief port, Guayaquil, with Quito. Highway mileage was 4,280 of which 2,730 miles were termed all-weather. Pan American furnishes international plane service. Telephones in 1942 numbered 8,000; radio sets in 1941, 6,800; and broadcasting stations, 27.

The budget in 1945 balanced at 369,000,-000 sucres. U. S. Export-Import bank loans totaled \$15,200,000 as of June, 1945, with \$4,900,000 outstanding. The national debt on Oct. 31, 1944, was 448,300,000 sucres (about \$32,000,000). American direct investments in 1940 were \$5,107,000; British investments in 1944, \$3,807,340.

Two high and parallel ranges of the Andes, crossing Ecuador from north to south, are topped by tall volcanic peaks including Chimborazo (20,702 feet), Cotopaxi (19,498) and Cayambe (19,062). The region from the mountains to the coast is rich but extremely hot and swampy; beyond the mountains to the east is the rainy, forested and tropical Amazon plain, largely uninhabited. The longest river is the Rio Napo which joins the Amazon after 700 miles, but the most important is the Guayas, navigable for 200 miles from the Pacific. Though it lies on the equator, Ecuador ranges from tropical to temperate to the Arctic climate of its snow-capped peaks. Most of the population is in the high Andes basins or the Pacific lowlands.

The Galápagos Islands, of volcanic formation, half the area of Connecticut, once were notorious as a pirate hangout, later were studied by Charles Darwin before he wrote "The Origin of Species."

In 1942 Ecuador mined 128,684 oz. of gold and 129,832 oz. of silver. In 1945, 2,622,724 barrels of petroleum were produced. The country is the world's chief source of light, strong balsa wood, and exported 9,000,000 board feet in 1941. In the same year, 1,500,000 pounds of rubber were produced. Dye wood, cinchona bark, kapok and vegetable ivory from the ivory-nut palm are other forest products.

Egypt (Kingdom)

(Misr)

Area (approx.): 383,000 square miles.

Population (est. 1943): 17,423,000.

Density per square mile. 45.4.

Sovereign: King Farouk I.

Premier: Ismail Sidky Pasha.

Principal cities (census 1937): Cairo, 1,312,096 (capital); Alexandria, 685,736 (chief port); Port Said, 124,749 (Suez Canal terminus); Tanta, 95,260 (RR center, Nile delta); Mansûra, 69,036 (cotton); Damanhûr, 61,962 (farming center, Nile delta).

Monetary unit: Egyptian pound.

Racial stock (1927): Egyptian, 95.4%; Arabian, 1.7%; Greek, .6%; Others, 2.2%.

Language: Arabic.

Religions (1937): Mohammedan, 91.40%; Christian (mostly Copt and Greek Orthodox), 8.19%; Jewish, .40%; Others, .01%.

Historical Egypt, half again the size of Texas, and the largest and most influential of the Arab states, has been an object of big power controversy for centuries. In modern times its ambitions for complete and unfettered independence have been frustrated by the British who had to protect their Suez Canal life line through Egyptian territory. In World War II, one of the great decisive battles was fought just inside Egypt's western border in 1942 when British Empire troops stopped the advancing Nazis at El Alamein, thus saving Suez.

Egyptian history dates back to about 4000 B. C. when the kingdoms of upper and lower Egypt, already highly civilized, were joined. Persia conquered Egypt in 525 B. C. Alexander the Great conquered it in 332 B. C., and then the dynasty of the Ptolemies ruled the land until 30 B. C. when Cleopatra, last of the line, committed suicide, and Egypt became a Roman province. From 641 to 1517 the Arab caliphs ruled Egypt, and then the Turks took it and made it part of their Ottoman Empire. Mehemet Ali, leader of a band of Albanian soldiers became Pasha of Egypt in 1805, founding the present line of rulers. After completion of the Suez Canal in 1869, the French and British took increasing interest in Egyptian affairs.

Finally, British troops occupied Egypt in 1882 and British residential agents became its actual administrators, though it remained under nominal Turkish sovereignty. On Dec. 18, 1914, this fiction was ended and Egypt became a British protectorate.

Pressure by Egyptian nationalists forced Britain to declare Egypt an independent, sovereign state on Feb. 28, 1922, although the British reserved their rights for the protection of Suez and the defense of Egypt. On Aug. 26, 1936, by an Anglo-Egyptian treaty of alliance, all British troops and officials were to be withdrawn, except from the Suez Canal zone. When World War II started, Egypt remained neutral, though it early became a strategic base for allied forces, both for its key location to fight German offensives in North Africa and because of the vital importance of Suez.

In March, 1942, the Wafd party won the elections and controlled the government until its cabinet was dismissed by the king in October of 1944. Ahmed Maher Pasha, the Saadist leader, formed a coalition cabinet of all parties except the Wafd

and was assassinated on Feb. 24, 1945, while reading a declaration of war against the Axis. Mahmoud Nokrashy Pasha, the foreign minister, succeeded him.

In the face of increased nationalist pressure, the British offered, on Jan. 26, 1946, to review existing treaty arrangements with Egypt. The Egyptians were especially perturbed over what they called a prolonged stay of sizeable British forces in their country in the wake of World War II. To facilitate the negotiations, Nokrashy Pasha resigned on Feb. 15 and Ismail Sidky Pasha formed a new moderate cabinet of Liberals and Independents. The Saadists and the Makramists withheld participation, the extreme nationalists were not invited, and the Wafd could not participate because it had no parliamentary representation, having boycotted the elections of January, 1945.

Egypt's ruler, King Farouk I, born Feb. 11, 1920, succeeded his father, Fuad I, on April 28, 1936. He was married on Jan. 20, 1938, to Farida Zulfikar. Their children are Princess Ferial, born in 1938; Princess Fawzieh, 1940 and Princess Fadia, 1943. Since succession is limited to the male line, the heir presumptive is Prince Mohamed Ali, born in 1875, a first cousin to the king.

Egypt is a constitutional hereditary monarchy. The bicameral parliament has a Senate of 147 members, two-fifths of whom are appointed by the king and the rest popularly elected for 10 years; and a chamber of deputies of 264 members popularly elected by universal male suffrage for five years unless sooner dissolved by the King. The king acts through a cabinet appointed by him but responsible to Parliament. The Wafd party which represents the majority of Egyptian opinion has suffered from internal dissension and two major splinter groups exist—the Saadists and the Wafdist bloc (Makramists).

For local government the country is divided into five towns and fourteen provinces, whose administrators are responsible to the Ministry of the Interior.

The judicial system applicable solely to Egyptians includes the *Mehkemas*, religious courts which judge in all cases of personal status, and the national courts consisting of 102 summary tribunals, 11 central tribunals, 2 courts of appeal and, at the top, a court of cassation. Criminal jurisdiction of the consular courts was abolished by the Convention of Montreux (October 15, 1937), but mixed courts, composed of Egyptian and foreign judges, will continue to judge civil cases between Egyptians and foreigners and between foreigners of different nationalities until October 14th, 1949.

Under the Anglo-Egyptian Treaty of 1936 the peacetime strength of British troops

in the Suez Canal zone is set at 10,000 with 400 pilots, but no limit is set in time of war or international emergency. Military service is compulsory. The army in 1939 had 32,579 men but it has since been expanded considerably and re-equipped. The navy included 4 patrol vessels, 1 escort vessel and one transport. The principal bases are Alexandria, wartime headquarters of the British Mediterranean fleet, and Port Said.

Education is compulsory between ages of 7 and 12. In 1939 there were 4,065 elementary and secondary schools with attendance of 1,064,209. The University Mosque of el-Azhar in Cairo (founded 972 A. D.) is the chief theological seminary of the Moslem world. The University of Fuad I in Cairo (founded 1908) had 8,179 students in 1943 while the University of Farouk I in Alexandria (founded in 1943) had 2,049 students.

The great majority of the people are Sunni Moslems. The Christians are mainly Copts with an admixture of Armenian Syrian and Maronite sects. The head of the Coptic organization is the Patriarch of Alexandria whose jurisdiction also extends over Ethiopia. The population divides generally into fellahin or peasantry, and townspeople of the same blood, the Bedouins or Nomad Arabs of the desert, the Berberins who occupy the Nile Valley between Aswan and Dongola, and the foreigners, chiefly Greeks, whose main center is Alexandria. Egypt has perhaps the highest birth rate in the world (1934-3 annual average, 43.1; 1941 about 40.9) and one of the highest death rates (1934-3 annual average, 27.5). The density of the population in the small inhabited area (1,283 per square mile) is far in excess of Belgium or Bengal.

Agriculture is the chief industry, employing about 62 percent of the population. Only about 3.5 percent (8,620,850 acres of the total area is arable and only about 5,350,000 acres are actually under cultivation, almost entirely in the Nile Valley and delta. Irrigation is indispensable to agriculture; the Aswan reservoir above the first cataract of the Nile holds up to 5,500,000,000 cubic meters of water and that of Gebel Aulia, in the Anglo-Egyptian Sudan, 2,000,000,000 cubic meters. In the delta and middle Egypt where perennial canal irrigation is possible, two or three crops a year can be grown. The chief money crop is cotton of which Egypt is a big producer. Other crops include fruit, vegetables, roses, dates and grapes. The pastoral industry is relatively unimportant except to the Bedouin in the eastern desert. Buffalo are used to turn water wheels for irrigation. In 1943 there were 1,100,100 buffalo, 1,423,072 sheep, 1,202,284 cows, 826,796 donkeys and 174,054 camels.

MAJOR AGRICULTURAL CROPS, 1945

Crop	Acres	Tons
Maize	2,018,053	1,861,895
Wheat	1,774,550	1,300,365
Barley	372,000	287,760
Rice	664,320	917,300
Beans	406,898	339,125
Sugar cane		
(Sugar content)	99,648	183,755
Onions	26,988	171,350
Cotton (ginned)	1,019,316	263,250

Industry, in second place in the national economy, includes sugar refining, cotton spinning, milling, and pottery and perfume making. The French-controlled Sugar Company of Egypt holds a monopoly on sugar refining.

Imports were \$247,000,000, with Britain the biggest supplier. Exports in 1945 came to \$187,000,000, with Britain the largest customer. Chief imports were chemicals and drugs and mineral products, including oil. Major exports were cotton and other textiles, vegetable products, and food, beverages and tobacco products.

Navigable throughout its course in Egypt, the Nile is used largely as a means of cheap transport for heavy goods. The principal port is Alexandria. Railway mileage in 1943 totaled 4,429. Branch lines link Cairo and Alexandria with Suez and nearly every town in the Delta. Highway mileage 6,828. Telephone number 67,983. Payne Field, a large U. S. Army air base at Cairo, was turned over to Egypt in July of 1946. The 1945-46 state budget estimate was \$72,330,000, excluding expenditure of about \$257,000,000 for a five-year public works plan, hydroelectric development and cotton purchase program. The public debt on Oct. 31, 1944 was \$380,696,000, and the foreign assets reserve, \$414,213,800. A member of the sterling bloc, Egypt had a sterling balance on June 30, 1945, of \$50,000,000.

Egypt, at the northeast head of Africa, is a very rough square, with the historic Nile winding northward through its eastern third. On either side of the Nile Valley are desert plateaus, spotted with fertile oases. To the north, toward the Mediterranean, these plateaus are low, while south of the Nile they rise to a maximum of 1,015 feet above sea level. At the head of the Red Sea, off the northeast corner of Egypt, is the triangular Sinai Peninsula, lying between the Suez Canal and Palestine.

The thickly settled part of Egypt, one of the most thickly settled areas in the world, is the Delta of the Nile, starting 100 miles south of the Mediterranean and fanning out to a sea front of 155 miles between Alexandria and Port Said. From Cairo south, the Nile branches into many streams, the principal of which are the Nubia and the Rosetta, assisted by a

network of canals. Except for a narrow belt on the Mediterranean, Egypt lies in an almost rainless area, in which high daytime temperatures fall quickly at night.

The most important minerals are manganese ore (132,146 tons in 1939), and oil (9,100,000 barrels in 1944). Phosphate rock, gold, iron ochres, nickel, sodium carbonate, sulphate talc and tungsten also are mined. There are many valuable building materials and also turquoise and emerald mines.

Egypt has no forests. The total value of the fisheries in 1939 was \$3,529,595 for a catch of 32,026 tons. The chief fishing ground is Lake Menzala (780 sq. mi.) in the Delta but fish are also caught along the coast of the Delta and in the Nile. Dried and salted fish eggs (*batarekh*) are an Egyptian specialty.

SUEZ CANAL. The Suez Canal, in Egyptian territory between the Arabian desert and the Sinai Peninsula, is an artificial waterway 103 miles long between Port Said on the Mediterranean and Suez on the Red Sea. Construction work, headed by the French engineer Ferdinand de Lesseps, was begun April 25, 1859 and the canal was open Nov. 17, 1869. The cost was 432,807,882 francs. The concession is held by a French company, *Compagnie Universelle du Canal Maritime de Suez*, in which the British government holds 295,026 out of a total of 652,932 shares, purchased in 1875, by Disraeli for £3,976,582. The concession expires Nov. 17, 1968, when it will revert to the Egyptian government. On the board of management are one Dutch, two Egyptian, 19 French and 10 British directors. In the last normal year (1938), 6,127 vessels with a net tonnage of 34,249,745 passed through the canal; toll receipts were 1,784,278,091 francs. In 1945, 4,206 vessels with a tonnage of 25,064,966 passed through the canal; toll receipts were £9,911,500. Of the vessels, 63.42 percent were British; 22.17 percent, U. S.; 4.48 percent, Dutch; 3.11 percent, Norwegian; 2.52 percent, Greek; and 2.01 percent, French.

ANGLO-EGYPTIAN SUDAN. *Status:* Anglo-Egyptian condominium. *Area:* 967,500 square miles. *Population* (1942): 6,590,996. *Capital:* Khartoum (pop. 1944: 76,724). *Governor general:* Lt. Gen. Sir Hubert Huddleston. *Foreign trade* (1944): imports, \$41,380,000; exports, \$35,976,300. *Agricultural products* (1943-44): cottonseed (84,477 tons), ginned cotton (lint) (44,500 tons), millet (521,400 tons), sesame, wheat, groundnuts. *Minerals:* Gold, salt. *Forest product:* Gum arabic (1939: 26,868 tons).

The region which, before the revolt against Egyptian rule by the Arabized tribes under the Mahdi Mohammed Ahmed in 1881-84 was known as the Egyptian Sudan, has, since its reconquest by the

Anglo-Egyptian expeditions of 1896-98 been known as the Anglo-Egyptian Sudan. About one-fourth the size of Europe, it extends from north to south about 1,200 miles and west to east about 1,000 miles. A governor general, appointed by the King of Egypt on British recommendation, is assisted by a council of 6 to 8 members. The 8 provincial governors are responsible to him. All the higher administrative officials are British.

The northern Sudan is a continuation of the Sahara Desert. The southern region is fertile, abundantly watered and, in places, heavily forested. It is traversed from north to south by the Nile, all of whose great tributaries are partly or entirely within its borders. The highest elevation is a mountain range parallel to the Red Sea, with heights of 4,000 to over 7,000 feet. The Sudanese tribes, both Arabs and Negroes are, as a general rule, indolent. The Sudan is the chief source of gum arabic; the southern forests also are rich in fibers and tannins. There are two trunk railways, one connecting the Sudan with Egypt and the other affording access to the chief port, Port Sudan, on the Red Sea.

Eire (Republic)

Area: 26,601 square miles (not including larger water bodies).

Population (est. 1944): 2,938,000.

Density per square mile: 110.4.

President: Sean T. O'Kelly.

Prime Minister: Eamon de Valera.

Principal cities (est. 1943): Dublin (Baile Atha Cliath), 495,074 (capital); Cork, 75,484 (seaport); Dún Laoghaire (Kingstown), 42,105 (seaport); Limerick (Luimneach), 42,070 (seaport).

Monetary unit: Irish pound.

Racial stock: Irish.

Languages: Gaelic; English.

Religions (1936): Roman Catholic, 93.4%; Protestant Episcopal, 4.8%; Presbyterian, 1%; Other, .8%.

Eire—formerly Ireland—is an agrarian and cattle-raising state that occupies five-sixths of the island just west of England, across the Irish Sea. It is one-eighth the size of Texas but has four times as many head of livestock per acre. It is a moist, mild land of lovely lakes, no snakes and rich greenery, and is the country of origin of several million Americans. Eire's fiercely independent people are still subject to some of the tensions tracing back to their revolt against British rule in 1919-21.

In about the beginning of the Christian era, Ireland was divided into five kingdoms—Ulster, North Leinster, South Leinster, Munster and Connaught—each with its own ruler, but each subject to the Ard-Ri, the overlord of all Ireland who dwelt at Tara. St. Patrick introduced

Christianity in 432 A. D. and became the country's patron saint. Norse depredation along the coasts, starting in 795, were ended in 1014 by the Norse defeat at the Battle of Clontarf by forces under Brian Boru. In the middle of the 12th century the Pope gave all Ireland to the English crown. In 1171 Henry II of England was acknowledged "Lord of Ireland," but national rule continued for centuries as English control over the whole island was not reasonably absolute until the 17th century. By the Act of Union of 1800, England and Ireland became politically united as the "United Kingdom of Great Britain and Ireland."

Ireland wanted aggressively to be free. Several home rule bills were introduced in the English Parliament in the 19th century, but failed of passage. One was finally approved in 1914, but enforcement was suspended by the outbreak of World War I. During the war, heated agitation for freedom was carried on by the nationalist party—Sinn Féin (Ourselves). In 1916 the British quickly suppressed the famous Easter Week rebellion.

After the 1918 elections, seventy-three Sinn Féiners elected to the English Parliament met in Dublin, announced themselves an Irish Parliament, and approved a declaration of independence. The result was war between Irish nationalists and British soldiers from January of 1919 to May of 1921. A treaty ratified in December of 1921 gave Ireland political status equal to Canada. Six Ulster counties, largely Protestant, formed a separate government as Northern Ireland, closely bound to England; the other twenty-six became the Irish Free State. Republican extremists headed by Eamon de Valera, refused several years to recognize the treaty.

William Cosgrave, the right wing leader, was president from 1922 to 1932. In the year, de Valera's party, Fianna Fáil, won control of the government. Under de Valera's leadership a new constitution was adopted in 1937 making Eire, in effect, a republic with a president replacing the British governor-general, and with a majority party leader serving as prime minister.

The first president under this system was Dr. Douglas Hyde, with de Valera as prime minister. Throughout World War II Ireland maintained strict neutrality. In elections in June, 1945, the government candidate, Sean T. O'Kelly, the deputy prime minister, defeated his two opponents for the presidency—General Sean McBride and Dr. Patrick McCarton.

Eire is now a sovereign, independent democratic state. The oath of allegiance to England's king was abolished in 1933, and in 1945 de Valera described Eire as a public linked with the British Commonwealth.

wealth only by the External Relations Act of 1936. The president, directly elected for seven years, names the prime minister on the nomination of the chamber of deputies. Executive authority is in a cabinet of from seven to fifteen ministers. Parliament (Oireachtas) has two houses. The chamber of deputies (Dail Eireann) has 138 members elected by proportional representation for a seven-year term. The senate (Seanad) has sixty members, of whom eleven are named by the prime minister, six by the universities, and forty-three elected from vocational panels.

For administration, Eire is divided into twenty-six counties and four county boroughs, each governed by a local council. There is a five-judge Supreme Court; judges and justices of the Supreme Court are presidentially-appointed.

Military service is voluntary. The regular army of 7,933 in 1940 was expanded during World War II and a large voluntary force also was trained. By 1941 it was estimated that 250,000 men were in the army or volunteers. In 1938 Britain gave up its last defense posts in Eire, including those at Cobh, Berehaven and Lough Swilly. About 15 percent of the 1944-45 budget went for the defense of neutral Eire.

Elementary education is free and in state schools; secondary education is under private control, notably the religious orders. Technical and agricultural education is under local control, aided by state subsidies. The 5,032 elementary schools in 1943-44 had 454,647 students; 371 secondary schools had 39,787 students. University education is available at the University of Dublin (Trinity College) founded 1591, with a 1944-45 enrollment of 1,400 and the National University of Ireland (constituent colleges at Cork, Galway (Gaillimh), and Dublin) with an enrollment of 4,750.

The majority of the people are English-speaking, although the government has attempted to promote the traditional Gaelic language, which is an essential part of the curriculum for all state schools. While the birth rate continues to be relatively high (1936-38 average: 19.4; 1943: 21.7) the relatively high death rate (1936-38 average: 14.4; 1943: 14.7) and continued migration to the British Empire have resulted in a slight but steady decline in the population. The marriage rate is one of the lowest in the world (1936-38 average: 4.0; 1943: 5.8).

Eire is predominantly an agricultural country with about 70% of the total land area (17,024,485 acres) devoted to crops and pasture. The pastoral industry is the basis of the nation's economy, but recent years have brought a greater diversity in agriculture, marked by large increases in sugar beet and wheat production, and a slight decrease in dependence on livestock

exports. Principal crops in 1944 in short tons were potatoes, 3,360,800; wheat, 610,400; oats, 871,500; barley, 170,500; beet sugar, 89,100. Other staple crops are turnips, cabbage, flax, and hay. Livestock in 1944 included 4,245,936 cattle, 2,663,062 sheep, and 380,824 swine. Wool output in 1944 was 7,929 short tons. Agricultural production in 1943-44 was valued at about \$365,000,000.

The government's self-sufficiency policy and the financial and tariff inducements offered have promoted considerable industrial development since 1928. The leading manufactures, in order of value, are beverages, tobacco, wood and paper, clothing, textiles and metals. The hydroelectric plant erected on the Shannon River in County Limerick (estimated cost of full development: about \$35,000,000) provides cheap light and heat for homes throughout Eire as well as power for mills, dairies, and other industrial plants.

Exports in 1945 totaled \$140,011,145, of which 78.5 percent went to Britain; imports were \$164,050,995, of which 44.6 percent came from Britain, 13.7 percent from Canada and 10.5 percent from the U. S. The major export is cattle; others are bacon, beer, butter, horses, eggs and textiles. The major imports are textiles, coal and wheat followed by iron and steel, corn, tea, petroleum, clothing and tobacco.

The merchant marine in 1943 had 476 vessels with a net tonnage of 45,184. The inland waterway system with length and tons carried in 1943 includes Grand Canal (208 mi.; 227,403 tons), Royal Canal (96 mi.; 4,109 tons), and Shannon River (128 mi.; 69,489 tons). Railway mileage in 1943 was 2,493, mostly in the Great Southern system. Main roads in 1943-44 totaled 10,600 miles, and secondary roads, 38,300 miles. Cross-channel air service is supplied by Irish Airways, Ltd. and West Coast Air Services, Ltd. An air agreement with the United States, Feb. 5, 1945, gives U. S. air lines the right of commercial entry at Shannon airport. Telephones in 1944 totaled 51,000.

The monetary unit is the Irish pound which has the same value as the British pound sterling. Eire is part of the sterling bloc; sterling balances outstanding to her on June 30, 1945 amounted to £170,000,000. Revenue in 1945-46 was estimated at \$193,000,000 and expenditures, \$212,000,000. The public debt in 1945 was \$320,500,000.

Occupying the entire island except for the six northeastern counties of Ulster, Eire is a basin shape—a central plain rimmed about with mountains, except in the Dublin region. The mountains are low, with the highest peak, Carrantuohill in Kerry County, rising 3,414 feet. Eire's principal river is the Shannon, which begins in the north central, flows southwest for

240 miles and empties into the Atlantic. About 20 percent of the country is covered by bogs, and among Eire's many lakes are the Killarney lakes in the southwest.

Eire's moist and mild climate, with annual rainfall running between thirty and forty inches, is influenced by the Gulf Stream making the winters warmer than in other places in the same latitude.

In 1944 Eire mined 226,600 short tons of coal, some gypsum, and considerable peat from its bogs, but otherwise the mineral and also the forest resources are negligible. Some 10,000 Irishmen man a fishing fleet of 3,300 craft, two-thirds of which are row-boats. The 1944 catch, including mackerel, herring, whiting, cod, plaice and shellfish, was valued at \$2,356,000.

Ethiopia (Kingdom)

Area: 350,000 square miles.

Population (est.): 9,500,000.

Density per square mile: 27.

Ruler: Emperor Haile Selassie I.

Prime Minister: Bitwoded Makonnen Endalkatchau.

Principal cities (est. 1939): Addis Ababa, 150,000 (capital); Dire Dawa, 30,000; Harar, 25,000.

Monetary unit: Maria Theresa dollar.

Racial stock (est.): Abyssinian, 20%; Galla, 50%; Others, 30%.

Languages: Amharic, Arabic.

Religions: Christian (Copt), Mohammedan.

Land-locked Ethiopia, a country more than twice the size of California and situated in a table-land surrounded by deserts in east central Africa, was one of the first victims of the Axis aggression that led to World War II. Italy, after creating fake border incidents, invaded the country on Oct. 3, 1935 and the Ethiopian capital, Addis Ababa, fell on May 5, 1936. Haile Selassie, the emperor, fled the country and the Italians welded Ethiopia, Italian Somaliland and Eritrea into the colony of Italian East Africa.

World War II brought liberation. British and Ethiopian troops reconquered the country in 1941, with the final Italian surrender occurring on Nov. 27. During a transition period, the nation was under dual Anglo-Ethiopian control. Under an agreement signed on Jan. 31, 1942, British troops quit the country except for stipulated border areas, but a good deal of British supervision continued for several years thereafter.

The Ethiopian royal family claims descent from the Queen of Sheba and from Menelek, a son of King Solomon. Christianity was introduced in 330 A. D., and after the Arab conquest of northern Africa in the 7th Century, Ethiopia was more or less cut off from the outside world

for a thousand years. When Theodore III proclaimed himself emperor in 1853, the country was a conglomeration of autonomous provinces under hereditary chiefs usually at war with one another. Menelek II, taking the throne in 1889, brought Ethiopia under single rule and his forces finished off a five-year Italian attempt at invasion with a great victorious massacre at Aduwa on March 1, 1896. Revenge for this massacre was one of Mussolini's great war cries in the 1935-36 invasion against the forces of Haile Selassie, who had become emperor on Nov. 2, 1930.

Ethiopia's ruler Haile Selassie was born on July 17, 1891, crowned king on Oct. 7, 1928, and became emperor two years later. His son, the crown prince and heir apparent, is Afsa Wassan, born on July 27, 1916. The emperor directly controls the government, though a system has been installed which includes a Council of Ministers, a Senate and a Chamber of Deputies. The twelve provinces are each ruled by a Governor-general directly responsible to the Interior Ministry. In wartime, military service is compulsory. The small Ethiopian standing army is being equipped and trained by a British military mission.

The education system is extremely backward. Foreign missions or the government maintain schools in the principal towns, and there is one secondary school in Addis Ababa with seventy pupils. The Coptic Church (Christian), with its numerous priests, exercises a powerful position and owns much Ethiopian land. It is headed by the Abuna, an Egyptian Copt, appointed by the Coptic Patriarch of Alexandria. Moslems, numerous in frontier regions, have their religious center at Harar. Ethiopia's ruling clan, the Amhara, inhabits the central highland. The country also has various other Moslem, Coptic, Jewish and Somali tribes. Its towns are scattered, backward and crudely built.

Ethiopia is generally fertile, predominantly agricultural and pastoral, with many regions yielding two crops a year. The chief crops are maize, millet, barley, rye, cotton, sugar cane, wheat, hemp, vegetables, coffee and tef—the common bread grain. The country's almost non-existent transport system, however, makes crop growing largely a local industry. Canadian wheat, for example, can be delivered in Cairo cheaper than Ethiopian.

The country grazes several million cattle, and many goats and sheep. Horses and mules are bred extensively as pack animals and mounts. There is little manufacturing except for small native industry, though the Italians built some plants.

Imports in 1943-44 were \$15,776,850 and included salt, textiles, building materials, oil, sugar, glass and soap. Exports were \$8,812,875 and included coffee, hides, skins,

grain, wax, gold, cotton and butter. The 486-mile route from Addis Ababa to Jibuti in French Somaliland is Ethiopia's only rail outlet and principal trade route. Until about 1925, the country had no roads suitable for motor travel. After that year, the government built about a thousand miles of fair roads, and the Italians built roads totaling 4,340 miles, linking Addis Ababa with Eritrea, British Somaliland and the southeast.

Government expenditures in 1943-44 were \$12,622,343, while all revenues totaled about \$11,462,850.

Over its main plateau-land, Ethiopia has several high mountains; Dajan, the tallest peak, towers to 15,160 feet northeast of Lake Tana. Most of the many rivers are rapid, not navigable, and flow to the Nile. The Blue Nile, or Abbai, rises in the northwest and flows in a great semicircle east, south and northwest before entering the Sudan. Its chief reservoir, Lake Tana (1,100 square miles), lies 5,690 feet above sea level in the northwestern part of the plateau.

Gold, produced from placer mines worked by natives in the south and west, is Ethiopia's main mineral. Production in 1936 was 25,700 ounces. Platinum also is mined in fair commercial quantities. Other minerals are rock salt, cinnabar, copper, iron, mercury, mica, potash and sulphur. Oil is believed to exist under Ethiopia's surface and in 1945 all oil rights were sold to the Sinclair firm, of the United States.

Vegetation is dense in the valleys and lowlands, but the plateau is comparatively bare, especially in the north. The forests contain many valuable trees including the Natal yellow pine and the Kosso.

Finland (Republic)

(Suomen Tasavalta)

Area (1945): 134,324 square miles.

Population (est. 1940): 3,887,217.

Density per square mile. 28.9.

President: Juho K. Paasikivi.

Prime Minister: Mauno Pekkala.

Principal cities (est. 1939): Helsinki, 304,965 (capital); Tampere, 76,730 (textiles, paper); Turku (Åbo), 74,351 (seaport, shipbuilding); Vaasa, 32,695 (seaport).

Monetary unit: Markka (FM).

Racial stock: Finnish, 88.7%; Swedish, 11%; Others (Russian, German, Lapponic), .3%.

Languages: See Racial stock.

Religions (1937): Evangelical Lutheran, 97%; Greek Orthodox, 1.7%; Roman Catholic, .02%; Others, 1.28%.

Finland is a long-settled country of forests, lakes and fisheries and, most recently, of bad luck in unwanted war. In 1939-40 the Russians attacked Finland to enforce territorial demands and, while the

Finns stood off big Red Army assaults for 105 days, they finally lost and ceded to Russia 10 percent of their area including the Karelian Isthmus. Under German pressure and in spirit of revenge, the Finns joined the Nazis against Russia in World War II—and lost again. This time Russia took Finland's ice-free Arctic port of Petsamo, nearby nickel mines, and levied a \$300,000,000 indemnity to be paid in goods.

The sturdy Finns, whose Montana-sized country has its principal wealth in wood pulp, newsprint and paper, resigned themselves to hard work to pay their bill. Their leaders acknowledged gratitude for two things—Russia could have crushed Finland completely in either war, but didn't; and there was a minimum of internal Communist pressure in Finland.

The Finns, a distinctive people of possibly Mongolian origin, first settled their area substantially in about 100 A.D. King Eric IX, of Sweden, conquered them in about 1155 and introduced Christianity. Under Swedish rule, which lasted for 650 years, the Finns retained considerable autonomy and were given their own parliament in the 17th century.

Political pressure growing out of the Napoleonic Wars forced Sweden in 1809 to cede Finland to Russia which gave the Finns a constitution and set them up as a grand duchy. Out of the chaos and complexities of World War I, the Russian revolution of 1917 and a Finnish civil war in 1917-18 between radicals and rightists, Finland emerged as a republic in 1919. A year later Russia ceded to Finland the Petsamo area which it reclaimed in 1944.

For the next twenty years Finland was generally orderly and prosperous, with decorum marred only by vigorous suppression of Communists and a rightist uprising in 1932. The national presidents were K. J. Stahlberg, 1919-25; Lauri Relander, 1925-31; P. E. Svinhufvud, 1931-37; K. Kallio, 1937-40; Risto Ryti, 1940-44; and Carl G. Mannerheim, 1944-46.

Ryti and Premier Edwin Linkomies, pro-Germans, were forced to resign on Aug. 1, 1944, and were replaced by Mannerheim and Antti Hackzell. Finland severed relations with Germany on Sept. 2, signed armistice on Sept. 4, and signed a provisional peace treaty with Britain and Russia on Sept. 19. The United States had not declared war on Finland.

Pro-Russian Juho K. Paasikivi became premier on Nov. 11 and when Mannerheim resigned because of illness on March 4, 1946, Paasikivi was elected by the Diet to the unexpired term ending March 1, 1950. The premiership went to Mauno Pekkala, leader of the just-formed Socialist Unity Party, made up of dissident and left-wing groups advocating cooperation with Communists in a popular democratic bloc.

Under a 1919 constitution, the 200 Diet members are popularly elected by a proportional representation system for three-year terms. The president, chosen for six years by an electoral college of 300 members nominated by the people, acts through his cabinet headed by the prime minister. Suffrage is universal for men and women over twenty-four. Because of the many political parties, the government usually is carried on by a coalition, with frequent cabinet changes.

Following the armistice an Allied Control Commission composed of English and Soviet military representatives was formed under the chairmanship of Soviet Col. Gen. A. A. Zhdanov. The Commission, Soviet-dominated, has concerned itself primarily with reparations, interfering but little in Finnish political life and making no effort at communism.

The judicial system, separated from the government, consists of a supreme court, 3 superior courts, and numerous district courts.

Military service is compulsory from 17 to 60; the initial training period is 1 year, after which trainees pass into the reserves. The president is commander-in-chief of the armed forces but may delegate his authority in wartime. In peacetime the Minister of Defense administers the armed forces, including the army, navy, air force and coast defense. At full mobilization Finland had about 20 divisions and 400,000 men in the field, plus a voluntary force of about 100,000 Civic Guards. The navy, on Dec. 31, 1945, consisted of one coast defense ship, five submarines and a number of small craft including minesweepers and launches.

Illiteracy is very low (.9% beyond age of 15). Education is compulsory from 7 to 15. In 1939 there were some 11,200 elementary schools with 411,000 students, 383 vocational schools with 20,583 students, 68 middle schools with 8,546 students, and 150 lyceums with 42,034 students. There were three regular universities of which Helsinki (founded 1640 at Turku) had the largest enrollment, 6,461.

The Swedish minority lives mostly in the southwest and the Aland Islands. About 60 percent of the total population is engaged in agriculture, 17 percent in mining and industry, 3.8 percent in transport, 4.3 percent in commerce, 2 percent in professions and 11 percent miscellaneous. Since 1918 the Finnish rate of population increase has been about 15 percent as compared with the European rate of 10 percent. The average annual birth rate in 1934-35 was 19.6, the highest in Scandinavia, while the average annual death rate in 1936-38 was 13.3. Considerable progress has been made in social legislation, including workmen's compensation. The cooperative movement is extensive. By a 1927 law, ex-

propriation of large estates was carried out with compensation to their owners.

Only about 3 percent of the land is under cultivation and about 5 percent in grassland (1940). The chief crops (1939, in short tons) were oats, 879,635; rye, 364,861; wheat, 250,222; barley, 306,280; potatoes, 1,715,179; and hay, 3,807,344 tons. Grazing lands are extensive. Livestock in 1939 included 1,938,000 cattle, 1,000,000 sheep, and 519,000 swine; there were 100,356 reindeer in 1937. Butter production in 1937 was 29,711 tons. Agriculture production in 1945 was estimated at more than a fifth below prewar levels.

In 1938 there were 4,422 larger manufacturing establishments with 214,387 workers and an output value of \$454,955,590. The leading manufactures were wood and paper (about $\frac{1}{2}$ of the total value), food and luxury items, machinery, and textiles. Following the cession of the Karelian isthmus and the city of Viipuri there remained 3,896 plants whose industrial production was valued at about \$398,000,000.

Exports in 1941 amounted to 4,189,000,000 FM and imports, to 8,818,000,000 FM. These statistics reflect war conditions; prior to the war Finland usually enjoyed a slightly favorable trade balance. In the last normal year (1938) pulp paper comprised 41 percent of exports; timber and wooden articles 39.9 percent; and food of animal origin 3.3 percent; metal and metal goods made up 16.5 percent of the imports; machinery and apparatus, 13 percent; minerals and manufactures, 7.7 percent; colonial produce and spices, 6.8 percent; and oils, fats and waxes, 5.8 percent. In that year 43.9 percent of the exports went to Britain; 15.2 percent to Germany; 9.2 percent to the U. S.; 4.8 percent to Sweden, and 4.4 percent to the Netherlands; while 21.1 percent of the imports came from Britain, 20 percent from Germany, 13 percent from Sweden, 9 percent from the U. S., and 5.1 percent from Belgium. Trade with the U. S. S. R. was negligible. Foreign trade other than with the U. S. S. R., is now curtailed by Soviet reparations payments to be made in kind.

The merchant marine in 1938 totaled 3,431 vessels of 544,000 tons. The numerous lakes, many of them joined by canals, are busy transport routes. About 40,000 vessels and 18,000 timber rafts use the canals annually. There were approximately 20,300 miles of highway in 1938 and 19,000 miles of secondary road. Railway mileage in 1938 totaled 3,658, almost entirely nationalized. Telephones in 1941 numbered 186,500.

The budget in 1946 totaled 55,000 million FM. The consolidated debt in 1943 was 44,800,000,000 FM as compared to 4,074,200,000 FM in Sept. 1939.

Finland stretches 700 miles from the Gulf of Finland on the south to Soviet

Petsamo, north of the Arctic Circle. Off the southwest coast are the Aland Islands, more than 300 of them, controlling the entrance to the Gulf of Bothnia. Finland has more than 60,000 lakes including Lake Ladoga, which is part Russian and the biggest lake in Europe. Of Finland's 1939 area, 11 percent was lake and 48 percent, swamp-land. Of the few rivers, only the Oulu is navigable to any important extent. Most of the country is tableland 400 to 600 feet in elevation, with a few rises to 2,000 feet in the Halditjikko region of the northwest. Finland's long severe winters are moderated a bit along the coast by prevailing southwest winds, but the summer lasts only about two and a half months. While southerly Finnish ports are icebound part of the year, Petsamo way above the Arctic Circle is always open, warmed by the Gulf Stream.

Finland has no coal or oil and many of its mineral deposits are remote from transportation. Copper production in 1939 was 13,004 tons. Finland's sulphide ore, yearly production about 300,000 tons, is 4 percent copper, 26 percent sulphur, and 27 percent iron with some zinc, cobalt, gold and silver. Limestone, soapstone and red granite deposits are extensive. Wood and peat are the only natural fuels.

Over a third of Finland is high quality timberland—the nation's richest natural resource. Exports of lumber, pulp and paper in 1938 totaled \$127,067,000—81 percent of total exports.

Finns have fished for centuries, not commercially, but for domestic consumption. The 1938 catch was 24,647 tons, 60 percent in Baltic herring.

Rulers of France

Name	Born	Ruled	Name	Born	Ruled
Carlovingians			41 Charles IX	1550	1560-1574
1 Charlemagne	742	768-814	42 Henry III	1551	1574-1589

*1936. †1941. ‡1944.

France (Republic)

Area: 212,741 square miles.

Population (est. 1945): 41,980,000.

Density per square mile: 197.3.

President: Leon Blum (interim).

Principal cities (census 1936): Paris, 2,829,746 (capital); Marseille, 814,679 (chief port); Bordeaux, 256,369 (seaport; wine); Nice, 209,382 (resort center); Lille, 200,757 (textiles); Strasbourg, 192,680 (chief Rhine port); Nantes, 190,465 (manufacturing).

Monetary unit: Franc.

Racial stock (1936): French, 94.2%; Others, 5.8%.

Religion (est.): Roman Catholic, 97.5%
Protestant, 2.5%.

One of the world's great nations in culture, art and learning, France was blec and devastated in World Wars I and II and emerged in mid-1944 after more than four years of Nazi occupation, as a staggering country. For its government, it sought a new constitution. For its shattered economy, it sought loans to re-vitalize field and factory. For its security, it sought, as of old, the assurance that Europe would never again see a strong Germany.

Fertile agrarian France is about the size of California and Illinois combined. It was ancient Gaul when Julius Caesar conquered a part of it in 58-51 B.C. In the 5th century A.D., it was overrun by the Franks, a Teutonic tribe. Between 768 and 814, Charlemagne created a Frankish empire covering most of Western Europe, but by the time Hugh Capet came to the throne in 987, his kingdom comprised only the region around Paris. For more than 300 years the Capets struggled to unify the many feudal fiefs.

Philip VI, cousin of the last Capet and first of the House of Valois, took the throne in 1328. Soon after, there began the Hundred Years' War, the struggle over England's bid to seize the French crown. The English won at Crécy in 1346 and at Agincourt in 1415, but were defeated at Orleans in 1429 by the French forces led by Joan of Arc. Cruel persecution of French Protestants, the Huguenots, was followed by civil war and then the Edict of Nantes in 1598 by which they received complete religious freedom from Henry IV, the first of the Bourbons.

Splendor, wealth and the establishment of a colonial empire marked the long reign of Louis XIV from 1643 to 1715. Its extravagance, however, forced Louis XVI to struggle with a tax problem at a time when the forces of revolution were boiling to a head among France's lower and intellectual classes. The first chapter of the French Revolution, of world significance for its impact on absolute rule, broke in 1789. The king was deposed in 1792 and executed the next year. Then came the Reign of Terror as the revolution swung to excess, the Directory from 1795 to 1799, and the Consulate from 1799 to 1804, after which Napoleon was proclaimed emperor. Meanwhile, French armies were engaged on all sides, spreading French hegemony over most of western and central Europe. The downfall came at Waterloo on June 18, 1815. The restored Bourbon, Louis XVIII, reigned until 1824 and was succeeded by his reactionary brother, Charles X, who was overthrown in the July revolution of 1830. Louis Philippe, of Orleans, was unseated in 1848, and succeeded by Napoleon's nephew, Louis. Inaugurated president of the Second Republic in 1848, Louis became emperor in 1852 and abdicated after France's defeat in the Franco-Prussian War of 1870-71. The resultant conflict between republicans and monarchists was resolved by the adoption of republican constitution in 1875.

Victorious with the allies in World War under Premier Georges Clemenceau, 1917-19, France emerged as the dominant power on the continent. From 1919 on, its aim was to keep Germany weak through a system of military alliances and by maintaining a strong French army.

The effort was a dismal failure. At home France was weakened by economic and political instability, with many short-lived cabinets. Germany became a dictatorship, with every national energy bent toward war. France, permitting political freedom, bickered and argued away its years. The leftist Popular Front coalition of Leon Blum, in 1936-37, and Camille Chautemps, 1937-38, was succeeded by the Radical Socialist and Radical cabinet under Edouard Daladier, one of the men of Munich.

Paul Reynaud took Daladier's place on March 21, 1940, less than seven months after the start of World War II. In May of 1940, Hitler's Nazi armies finally roared into France and on June 16, the reins of government fell to Marshal Henri Pétain who opposed continuation of the war. An armistice was signed June 21. The Third Republic was voted out of existence on July 10 by the National Assembly at Vichy and unoccupied France became totalitarian, with Pétain as chief of state.

Meanwhile, in London, General Charles de Gaulle formed on June 18, 1940, a provisional French National Committee which received British recognition. On Sept. 25, 1941, the French National Committee was formed, and changed its name to Fighting France on July 14, 1942. Then, on June 3, 1943, the French Committee for National Liberation was formed in Algiers.

After the liberation of Paris, de Gaulle entered the capital on Aug. 25, 1944, and formed a provisional government on Sept. 10, which was regarded as a continuation of the Third Republic. It received Allied recognition on Oct. 23. A twenty-year alliance with Russia was signed on Dec. 10, 1944. After the elections of Oct. 21, 1945, de Gaulle was named provisional president on Nov. 13 by the National Assembly. He resigned soon after and was succeeded by Félix Gouin, a Socialist, on Jan. 23, 1946. When the electorate rejected the new proposed constitution on May 5, and a new National Assembly was elected on June 2, Gouin resigned. Georges Bidault was elected to succeed him on June 19.

In the elections of Oct. 21, 1945, France picked a new National Assembly and assigned it to draft a new constitution. The resulting proposed constitution, providing for a strong legislature and a weak executive, was rejected by the electorate on May 5, 1946. The new Assembly, elected on June 2, was given seven months to draw up another constitution for submission to the voters. Meanwhile, France operated for the interim with a 586-member Assembly, empowered to elect the president who then formed a cabinet responsible to the Assembly.

On October 13, 1946, France adopted its fourteenth constitution by a vote of 9,126,370 to 8,043,366 (32 percent of the electorate not voting).

Metropolitan France is divided into ninety departments headed by regional commissioners. The lowest administrative unit is the commune with a locally elected mayor and council. There are also cantons, each composed of about twelve communes.

DEFENSE. The Head of Government is Minister for National Defense and Chef des Armées. He is assisted by the Minister of the Armed Forces and the Minister of Armaments. The chief of the General Staff for National Defense advises the Head of Government on general military matters. Under the Minister of the Armed Forces are three Chiefs of Staff for the Army, Navy, and Air Force. The strength of the army is fixed at 500,000 men. Military service is compulsory; recruits are called up at 19, serving for 14 months. The strength of the air force is stabilized at 100,000, and that of the navy, at 135,000. The navy, on Dec. 31, 1945, had 3 battleships, 1 escort carrier, 28 destroyers and large torpedo boats, 28 submarines and numerous other vessels. In 1946 the British navy leased to France for 5 years the aircraft carrier Colossus (14,000 tons) and also gave her 6 destroyers and 2 submarines from the British share of the German fleet.

EDUCATION. The educational system under the Third Republic presented the most complete type of a state system of education organized under a strongly centralized administration in all grades. The national minister of public education was assisted by a *conseil supérieur* of 52 members largely elected by the higher teaching profession. The country was divided for administration into 17 regional academies. Elementary education was free and compulsory from 6 to 14; instructors had to be lay, and religious instructions was prohibited in state schools. State elementary schools in 1937-38 numbered 70,069 with 4,503,669 pupils; 11,521 private schools had 932,885 pupils. In 1938 secondary education for boys—7-year course—was provided in *lycées* maintained by the state (130 with 124,767 pupils); by the communal colleges (222 with 64,281 pupils); and in private *écoles libres*. The secondary course for girls differed in scope and lasted 5 years; there was a total of 195 institutions with 93,301 pupils (1938). Higher education was supplied by the state in the universities and in special schools, and by private faculties and schools. There were in 1938 seventeen universities with 74,932 students; the largest, the University of Paris (Sorbonne), founded 1150, had 34,252 students, many of whom were foreign. In addition, there were numerous other professional, technical and vocational schools, and each department was required to maintain 2 normal schools, one each for men and women.

RELIGION. The predominant faith is Ro-

man Catholicism, but Church and State were separated in 1905. Diplomatic relations with the Vatican were resumed in 1921, and lesser church property was returned to diocesan associations in 1924.

RACIAL STOCK AND POPULATION. The people are not homogeneous, varying in racial type from section to section. During the inter-bellum period, the population remained almost static, with an increase of only 72,133 from 1931 to 1936. The birth rate also fell sharply (1925: 19.6; 1936-37 annual average: 14.8), but the end of World War II saw a slight uptrend, with an estimated birth rate of about 15.7 in 1945.

AGRICULTURE. The national economy of France is predominantly agricultural. Of the total area of 136,000,000 acres in 1939, 33 percent was devoted to crops, 19 percent to forests, 2.7 percent to vine, and 2 percent to market and other gardening. The vast majority of holdings are small farms worked by the owners. France normally is almost self-sufficient in basic foodstuffs and is the world's largest wine-producing nation.

MAJOR AGRICULTURAL CROPS BY ACREAGE AND VOLUME, 1938

Crop	Acreage	Volume (Ton)
Wheat	12,496,669	10,240,587
Rye	1,558,807	894,076
Barley	1,875,281	1,422,846
Oats	8,015,785	6,015,692
Potatoes	3,519,473	19,085,884
Vines	3,640,780	8,616,679
Sugar Beets	771,455	8,951,007

*Wine production 1,273,976,000 gals.

Other important crops are artichoke, berries, wheat, fodder beets, fruits, hazelnuts and turnips. Silk culture once thrived in the lower Rhone Valley but production fell sharply between wars. Milk, butter, cheese, eggs and poultry have become increasingly important as exports. Livestock in 1939 included 15,622,000 cattle, 9,872,000 sheep and 7,127,000 swine.

Hampered by a heavy drought and numerous mined fields, French agriculture failed to make any substantial recovery in 1945. While accurate statistics were not available, total production was probably the lowest in 5 years. The wheat crop was little more than half of normal, potatoes and sugar beets production declined; it was estimated that cattle had suffered a 35 percent decrease during the war. Wine production was only 666,000,000 gallons but high in quality.

INDUSTRY. Prior to World War II French industry was not as mechanized as that of Britain and Germany, and much of the manufacturing was carried on in small shops. The principal industrial areas were

aris, Artois, Lower Seine and Lyon; the textile industry was concentrated in the north. Leading manufactures in 1938 were iron and steel (pig iron: 7,914,000 metric tons; steel, 6,186,000 metric tons), chemicals, textiles, automobiles, machinery and beet sugar (872,367 metric tons). Shortages of coal, raw materials, new machinery, skilled manpower, and transportation facilities hampered progress in 1945. Production in important activities such as steel, textiles, shoes, and chemicals was still less than half the prewar figures.

TRADE. French prewar foreign trade was surpassed only by Britain, the United States, and Germany. Exports for the last normal trade year, 1938, totaled \$880,000,000 and imports, \$1,323,384,000, for an unfavorable balance of \$443,096,000 offset to some extent by invisible exports, notably heavy tourist expenditures and investments abroad. The principal single exports were iron and steel 6.4 percent, wool and wool waste 4.9 percent, cotton textiles 3.7 percent, metal manufactures 3.7 percent, silk and rayon textiles 3.2 percent, automobiles 2.9 percent, machines and motors 2.9 percent, wines 2.8 percent and hides and skins. Principal single imports were coal and coal products 10.6 percent, petroleum 8.3 percent, wines 7.2 percent, wool and wool waste 6.2 percent, oilseeds 2.2 percent, cotton 5 percent, cereals 4.3 percent, fruits 3.4 percent, machinery and motors 3.3 percent, coffee 2.3 percent, and copper 2 percent. The United States supplied 40 percent of the petroleum, 50 percent of the cotton, and 31 percent of the machines and motors. The major suppliers were French colonies 27 percent (Algeria 9.5 percent), United States 11.4 percent, Britain 7 percent, Belgium 6.9 percent, Germany 6.9 percent, Australia 3.3 percent, Iraq 3 percent, and India 2.8 percent. The chief customers were French colonies 27 percent (Algeria 12.4 percent), Belgium 13.7 percent, Britain 11.6 percent, Switzerland 6.3 percent, Germany 6 percent, United States 5.5 percent, and Netherlands 4 percent.

COMMUNICATIONS. The French merchant marine in 1939 had 11,282 ships and a gross tonnage of 2,952,975. World War II losses amounted to 1,814,000 tons; the deadweight tonnage on Mar. 31, 1946 was 300,000. The chief port is Marseille through which was cleared in 1938 more than 25 percent of the French total.

In 1938 there were 6,016 miles of navigable waterways including canals with a traffic of 49,610,268 tons. There are about 50 inland navigation ports of which Paris, Rouen, and Strasbourg each normally handle over one million tons annually (Paris, over ten million tons). Railway mileage in 1938 totaled 26,427 with a traffic of 272,087,323 tons. Railroads were merged in 1938 into the Société Nationale

des Chemins de Fer Français, of which the government owns the controlling interest. Highway mileage in 1939 was 393,761. Transportation bottlenecks in 1945 were still serious: the Rhine was not open for navigation until late in the year, and canals and railway facilities were seriously damaged (only $\frac{1}{2}$ of the prewar number of locomotives was in use) as were the ports (only 2 million tons cleared the ports in 1945 as compared with 42 million in 1938). Air France, nationalized on Jan. 1, 1946, operates on a world-wide basis, using U. S. aircraft for the most part; nearly 25,000,000 miles were scheduled to be flown in 1946.

FINANCE. The 1945 budget estimated revenues at 190,820,000,000 francs and expenditures at 406,000,000,000 francs. The national debt on Apr. 30, 1944 was 1,417,018 million francs. French investments in the U. S. (1941) totaled \$747,000,000. U. S. lend-lease assistance received by France and her possessions (\$2,377,072,000 or 4.8 percent of the total) was surpassed only by the British Empire and the U. S. S. R. On Dec. 2, 1945 the Bank of France (capital: 182,500,000 francs) and four large private banks were nationalized, and commercial credit was placed under strict government supervision.

TOPOGRAPHY. With maximum length of about 600 miles and width of 550 miles, France is second in size to Russia among Europe's nations. Its coast line is about 1,950 miles. In the Alps on the Italian and Swiss border is France's highest point—Mont Blanc, 15,782 feet. The forest-covered Vosges Mountains also are in the east and the Pyrenees are along the Spanish border. Except for extreme northern France which is part of the Flanders plain, the country may be described as four river basins and a plateau. Three of the streams flow west—the Seine into the English Channel, the Loire into the Atlantic, and the Garonne into the Bay of Biscay. The Rhone flows south into the Mediterranean. For about a hundred miles, the Rhine is France's eastern border. West of the Rhone and northwest of the Garonne lies the Central Plateau covering about 15 percent of France's area, and rising to maximum elevation of 6,188 feet. In the Mediterranean, 115 miles off the southeast coast, is Corsica, the island of Napoleon's birth, with area of 3,367 square miles.

CLIMATE. France's climate is temperate, but varies from long cold winters and hot summers in the northeast, to the subtropical temperature of the Mediterranean coast with very mild winters. With no high western elevations to block moisture laden winds from the Atlantic, all France has adequate rainfall of twenty to thirty inches a year.

MINERALS. French coalfields, most extensive in the northeast, supply about 70

percent of domestic needs. Lorraine, Anjou and Normandy have valuable iron ore deposits. Provence has bauxite. Alsace has potash and oil. Limousin has kaolin, zinc, lead and tar.

MINERALS, 1938 AND ESTIMATED 1944 PRODUCTION

Mineral	1938	1944
Coal (metric tons)	46,502,000	28,000,000
Iron Ore (metric tons)	33,176,000	9,270,000
Bauxite (metric tons)	684,000	665,600
Potash (metric tons)	581,800
Gold (oz.)	87,354	16,000

FORESTS, FISHERIES. France, with over 26,000,000 wooded acres, produces well over \$100,000,000 in forest products including resin, turpentine, timber and nuts, in a normal year. The annual catch of French fishermen is normally second only to Britain, among the nations of Europe. In 1937 the industry employed 130,710 persons on 9,711 sailing boats, 401 steamers and 11,373 motor boats. Cod and sardines were the biggest items in the 1937 catch valued at \$46,804,897. Others were coalfish, herring, whiting, mackerel, tunny, lobster, rays, flounder, sole and oysters.

AFRICA

French Equatorial Africa. Status: Colony. Governor General: Charles Bayardelle. Foreign trade (1938): Exports, \$7,601,000 (69.5% to France, 12.7% to Belgium); imports, \$8,512,000 (35.3% from France, 14.4% from U. S.); chief exports, wood, 38.2%, cotton and wool, 18.5%, gold, 13.6%, palm kernels and oil, 10.3%. Agricultural products: cotton (1945: 45,000 tons), wool, palm kernels and oil, coffee. Minerals: gold (1938: 40,028 oz.), zinc ore. Forest products: timber, rubber, copal gum, wax.

The colony lies in west central Africa, being bordered on the west by the Atlantic, Cameroun, Nigeria, and French West Africa; on the north by Libya; on the east by the Anglo-Egyptian Sudan; and on the southeast and south by the Belgian Congo. The coast, an early slaving center, was first settled by the French in 1839; French hegemony was subsequently extended by exploration and conquest of the native tribes. The territory declared for Free France following the armistice (1940). The governor-general, responsible to the minister of colonies, administers the whole area as a single administrative unit with the aid of an administrative council; each territorial region (Gabun, Middle Congo, Ubangi-Shari, Chad) has a

governor responsible to him. There were in 1944, 6,923 Europeans; most of the Africans are Negroes. There are Arab and Fulani settlements in the Chad region and several Moslem sultanates. Natural resources, both forest and mineral, are vast but relatively unexploited. The country's economic life depends on the forests and its products. Brazzaville, the capital, has one of the most powerful radio transmitters in the world.

Cameroun. Status: Mandate. Capital: Yaoundé (pop. 1944: 200,700). Commissioner: Henri-Pierre Nicolas. Foreign trade (1938): Exports, \$7,252,000 (56.5% to France, 23.4% to Netherlands); imports, \$6,194,000 (26.6% from France, 14.2% from the U. S., 13.3% from Britain); chief exports, cacao 33.6%, palm kernels and oil 25.9%, coffee 9.2%. Agricultural products: Sweet potatoes, millet, macabos, cacao, bananas, palm kernels and oil. Minerals: diamonds, gold, tin. Forest products: timber.

Cameroun is surrounded by French Equatorial Africa except for the Atlantic Ocean on the west and the British Cameroons mandate on the northwest. Cameroun became a German colony (1884) and after the conclusion of World War I was divided as a League mandate between Britain and France, with four fifths of the area going to France. The mandate had political and financial autonomy under a French commissioner, who is nominally responsible to the French government but also a member of the administrative council of French Equatorial Africa. Cameroun joined the Free French movement August 27, 1940. The chief port and commercial center is Douala (1944 pop: 46,840); the administrative center, Yaoundé, is located on the central plateau. In 1942 there were 3,227 Europeans.

Algeria (French colony)

(L'Algérie)

Area: 851,078 square miles.

Population (est. 1939): 7,600,000.

Density per square mile: 8.9.

Governor General: M. Yves Chataigneau.

Principal cities (census 1936): Algiers, 252,300 (capital); Oran, 194,746 (seaport); Constantine, 106,830 (trading center); Bône, 83,275 (seaport, phosphates).

Monetary unit: French franc.

Racial stock (census 1936): Native, 86.3% French, 11.7%; Other Europeans, 1.9%.

Languages: Arabic, French.

Religions: Mohammedan (natives); Roman Catholic; Jewish.

Algeria, more than three times the size of Texas and situated on the northern bulge of Africa, became far more than a big French colony during World War I. After American and British troops occu-

ied it following the landings of Nov. 8, 1942, it became the headquarters of the provisional French government of General Charles de Gaulle until the summer of 1944. For many months during that period it was the headquarters of the Allied Expeditionary Force.

In ancient times, Algeria became a Roman colony after the fall of Carthage in 46 B. C., and then was overrun by the Arabs in the 7th, 11th and 12th centuries. In the 13th century it became one of the three kingdoms founded on the ruins of the old Almohade Empire. Following a brief Spanish occupation, it went under Turkish suzerainty in 1518. For 300 years thereafter Algiers was the headquarters of the notorious Barbary pirates who preyed on Mediterranean shipping. The French ended Turkish rule by taking the city in 1830 but it was not until 1847 that they were able to suppress a holy war instigated in 1839 by Abd-el-Kader.

French policy for a time vacillated between complete assimilation of Algeria as part of France, and a decentralized administration under a governor general. In 1896 the idea of assimilation was abandoned. After France fell in 1940, Algerian government officials were loyal to Vichy, but their control was ended by the Allied invasion of the African coast in 1942.

In May and June of 1945 Algeria experienced serious disturbances instigated by the Arab nationalist movement. Severe casualties were caused.

In effect, Algeria is part of France. It is represented in the Constituent Assembly by twenty-six deputies, and it is one of the ten military districts of France, with both French and natives subject to military service. The governor general is responsible to the Interior, rather than Colonial, Ministry in the French Cabinet.

In 1938 the University of Algiers had 248 students. Primary and secondary schools for Europeans are on French lines. Most natives do not go beyond the primary grades. The knowledge and use of French is spread widely among the natives.

The area under cultivation is about 25,000,000 acres, over 20 percent of which is owned by European farmers. The highly fertile area in the vicinity of the coast is mostly owned by Europeans. The chief crops in 1938 were: wheat, 1,048,287 tons; barley, 647,160 tons; and oats, 174,274 tons. Algeria is a leading wine producer with almost 4 percent of the cultivated area, mostly in Oran, devoted to vines. Average annual wine production 1931-42 was 464,000,000 gallons (1945: 285,000,000 gallons). The olive tree is widespread; the average annual yield is 2,800,000 gallons. Tobacco, corn, vegetables, flax, silk, figs, and dates are also produced. Much of the area is more adapted to grazing, and in 1938 there

were 5,965,133 sheep, 2,736,544 goats, 789,316 cattle and 169,876 camels.

European industries include those dependent on crops, such as oil mills, distilleries and flour mills, also the making of leather, tobacco and matches. There are also small native industries, particularly the traditional carpet weaving.

Exports in 1938 totaled \$162,290,000 of which 83.5 percent went to France. Imports were \$143,766,000, of which 75.1 percent came from France. Wines comprised 50.6 percent of the exports (441,356,000 gallons, almost all to France). Others were fruits, iron ore, meal, and olive oil. The chief imports were cotton cloth, sugar, machinery and apparatus, metal manufactures, and vehicles. There is complete reciprocity between France and Algeria in customs dues.

Algeria has 2,734 miles of railway. A central line runs from the Moroccan to the Tunisian frontiers with branches north to all the ports and south into the Southern Territories. There is an excellent network of roads of more than 30,000 miles, and motor transport is well developed, including regular passenger and freight lines across the Sahara. In 1938 Algiers handled 3,813,913 tons of cargo; Oran, 3,358,613 tons; and Bone, 2,916,049 tons. Only French ships may normally trade between France and Algeria.

Revenue in 1944 was estimated at 4,263,863,652 francs; expenditure, 4,619,286,835 francs. France pays Algeria's military and naval expenses, but Algeria makes a war contribution of 6 percent of its budget.

Algeria fronts on the Mediterranean for 684 miles. Northern Algeria—80,252 square miles—extends inland for 185 to 250 miles. South of it is the big (770,826 square miles) economically unimportant Southern Territories. Low plains cover small areas near the coast but 68 percent of Algeria is a plateau between 2,600 and 5,200 feet above sea level. The region between the Sahara and the Mediterranean reaches a high point of 7,641 feet.

Most of the streams are periodic with the rains. The Chelif is the principal river, over 435 miles long. On the Saharan slopes, the oases or the hot sands absorb the streams as soon as they leave the mountain ridges.

Rainfall averages 30 to 40 inches on the coast, and decreases to virtually none on the Sahara. On the coast, temperatures average about 52° in winter, 77° in summer. Inland, the winter average is about 40° and summer about 81°, although the Sahara summer average is from 95° to 105°.

Algeria is a leading producer of phosphates, 644,241 tons in 1939. Iron ore of good quality, 3,422,682 tons in 1939, is found near the Tunisian frontier. Zinc, lead and salt are also important minerals;

and small amounts of oil and coal are produced.

Forests, mostly scrub, cover about 6,000,-000 acres. The cork output in 1938 was 24,800 tons. In the same year, alfalfa covered 10,000,000 acres on the plains and yielded 165,345 tons for paper pulp, while the dwarf palm produced 55,115 tons of fiber. The 1936 fish catch in the Mediterranean was valued at \$3,164,071, and included anchovies, sardines, shellfish, sprat and tuna.

Morocco

(Maroc)

Area: Fr. prot., 153,870 square miles; Span. prot., 8,706 square miles; Tangier, 232 square miles.

Population: Fr. prot., 8,000,000 (est. 1941); Span. prot., 992,000 (est. 1944); Tangier, 80,-000 (est. 1938).

Density per square mile: Fr. prot., 51.9; Span. prot., 92.5; Tangier, 344.8.

Sultan: Sidi Mohammed ben Youssef.

French Resident General: M. Gabriel Puaux.

Spanish High Commissioner: Gen. Juan Varela.

Principal cities (est. 1941): Casablanca, 453,-000 (chief seaport); (census 1936) Marrakech, 190,314 (trading center); Fez, 144,424 (commercial center); Rabat, 171,600 (French administrative center).

Monetary units: French franc; Spanish peseta.

Racial stock: Moroccan, French, Spanish, Italian.

Languages: Arabic, French, Spanish.

Religions: Mohammedan, Jewish, Roman Catholic.

HISTORY. Morocco, which is about the size of California, is just south of Spain and looks out on the Atlantic from the northwest shoulder of Africa. It was once the home of aggressors—the Berbers—who helped the Arabs invade Spain in 711, and then revolted against the Arabs and gradually won control of all Spain for a time after 739.

The country was ruled, successively, by various Berber, Sharifian and Hassani dynasties and maintained regular commercial relations with Europe, even during the 17th and 18th centuries when it was the headquarters of the famous Sali pirates. In the 19th century border clashes with the French and Spanish became frequent. Finally, in 1904, France and Spain divided Morocco into zones of French and Spanish influence, and these were established as formal protectorates in 1912. The Tangier Statute, signed by Britain, France and Spain in 1925, created an international zone at the port of Tangier, permanently neutralized and de-militarized. In World War II, Spain occupied the zone ostensibly to insure order, but she had to withdraw in 1945 and the international rule was re-established. The French zone in Morocco was under the Vichy government of France

in World War II but, three days after the Allied landing in North Africa in 1942 it came under Allied control.

GOVERNMENT. Morocco nominally is an absolute monarchy under a sultan, but actually the French resident general at Rabat, and the Spanish high commissioner at Teutun, direct Moroccan policies to a large extent. The sultan—the present one is Sidi Mohammed whose reign began Nov. 18, 1927—lives in the French zone and delegates authority to representatives in the Spanish zone and Tangier.

SOCIAL AND ECONOMIC CONDITION. Most of the natives are illiterate; some rudimentary education in Koranic schools or state maintained institutions. Education on European lines is provided in both zones for the white population.

The natives are Berbers, roughly divided by customs and way of life into three groups—the Riff people along the coast, the central people in the mid-Atlas Mountains, and the southern people in the high Atlas and Sus. There is a large Jewish population. Most of the Europeans live in the cities.

Morocco is essentially agricultural. In the French zone, about 25,000,000 acres are cultivated, with 1939 production of wheat coming to 1,163,927 tons; of barley, 2,345,694 tons. Corn, beans, peas, hemp, sorghum, citrus fruit and dates also are raised. The olive oil yield in 1943 was 8,000 tons. In 1942 the native stock raisers kept 12,000,000 sheep, 6,950,000 goats, 2,155,000 cattle and 164,200 camels.

In the Spanish zone agriculture is undeveloped, but it has potential importance under irrigation. Tangier's food raising is insufficient to meet its needs.

Manufacturing industries introduced by Europeans, mostly small scale, include beverage, chemical, fruit, leather, stone and textile. Native industries include carpet weaving and the making of Turkish slippers.

Exports from the French zone in 1938 totaled \$19,463,000 of which 45 percent went to France. Imports were \$61,212,000 of which 34.5 percent came from France. Chief exports were phosphates, wheat, fish, wool and eggs. Imports included sugar, mineral oil, cotton and rayon cloth and machinery. Exports from the Spanish zone in 1938 totaled \$3,984,000 and imports, \$6,896,000. A large proportion of the trade was carried on with Spain. Major exports were cattle, eggs, and iron ore; imports included flour, sugar, tea, wine and textiles. Exports from Tangier for the period October–December, 1945, after its return to international control, were \$424,000; imports \$1,200,000.

Railroad mileage in 1938 totaled 1,120 in the French zone, 71 in the Spanish zone.

and 11 in Tangier. Highway mileage was 636 in the French zone, 1,383 in the Spanish zone and 65 in Tangier. Casablanca, which handles about 80 percent of the French zone trade, has perhaps the largest artificial port in the world.

The importance of Tangier, once Morocco's first port, has declined under the international regime and its harbor works are obsolete. Two radio relay stations for messages between the United States and Russia were completed at Tangier in April 1946.

Revenues in the French zone in 1944 were estimated at 2,604,982,000 francs; expenditures, 2,604,658,000 francs. The budget for the Spanish zone in 1938 balanced at 11,785,245 pesetas. The 1946 budget of the international administration at Tangier provided for receipts of 360,000,000 francs and expenditures of 351,000,000 francs. Custom receipts provide most of the revenue.

NATURAL FEATURES AND RESOURCES. At Tangier, Morocco looks across the Strait of Gibraltar at Spain. On the Atlantic coast, there is a fertile plain; the Mediterranean coast is mountainous, making most of the Spanish zone a rugged area. The Atlas Mountains, running northeastward from the southern part of the country to the Algerian frontier, average 11,000 feet of elevation and terminate in Morocco as the high n' Tagharat, 15,000 feet high. Morocco's coastal climate is equable, but inland are increasingly greater extremes of cold and heat.

Exploitation of Spanish Morocco's almost exhaustible deposits of phosphate is a state monopoly and produced a total of 798,500 tons in 1945. Other major minerals, with 1938 production, were: coal, 135,000 tons; cobalt, 794 tons; iron ore, 293,000 tons; manganese ore, 95,456 tons; and polybdenum, tin, zinc and lead. Iron ore, 1,478,910 tons in 1938—is the chief mineral of the Spanish zone; others are antimony and manganese.

The French zone produced 25,573 tons of cork in 1938 from the densely forested northern Atlas slopes. Gums and tannins also are produced by the French; and cork, wax and charcoal, by the Spanish. Waters off both coasts are rich fisheries. In 1938, a total of 15,237 tons of canned tuna valued at \$2,601,025 was exported from the French zone, and 230 tons from Tangier.

Because of its strategic location on the Mediterranean shores and because of its very valuable mineral resources, Morocco has been the scene of imperial rivalry throughout the ages. These rivalries among countries such as France, Germany and Spain provoked crises almost resulting in wars. Among these was the 1905 crisis, settled at Algeciras in Germany's favor and the 1911 affair which gave France outright control of most of Morocco.

Tunisia (French protectorate)

Area: 48,300 square miles.

Population (est. 1940): 2,730,000.

Density per square mile: 56.5.

Ruler (Bey): Sidi Mohammed al-Amini.

French Resident General: Gen. Charles Mast.

Principal cities (census 1936): Tunis, 219,578 (capital); Sfax, 43,333 (phosphate port); Bizerte, 28,468 (seaport and naval base); Sousse, 28,465 (seaport).

Monetary unit: French franc.

Racial stock (1936): Arab and Bedouin, 89.6%; French, 5.4%; Italian, 4.6%; Others, .4%.

Languages: Arabic, French, Italian.

Religion: Predominantly Mohammedan.
